DEPARTMENT OF ARCHAEOLOGY

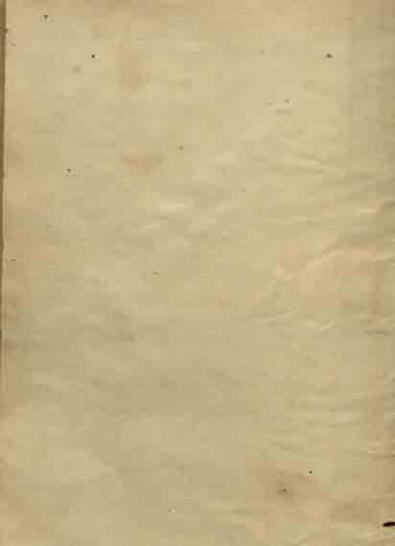

CENTRAL ARCHÆOLOGICAL LIBRARY

CALL NO. 708.14461/M.F. A.B.

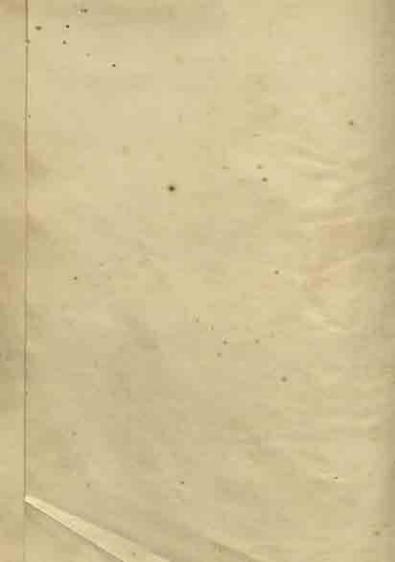

D.G.A. 79. GIPN St -2D G. Arth. N. D 57 -12-9-35-1,00,000.

4

#### MAIN FLOOR

From the Huntington Avenue entrance the stairway lends to the chief galleries of all the departments except that of Prints. The galleries of Prints occupy the eastern half of the ground floor of the Evans Bailding, entered also from the Forway.

On the smin floor the galleries of Chinese and Japanese Art and of Western Art are reached directly from the Rotunda on either hand. The galleries of Paintings are reached through the Tapestry Gallery, opening opposite the stairs. The galleries of Egyptian Art and Classical Art span from the end of the right-hand (Coptie) corridor. In all these departments the exhibits are arranged chromologically as far as practicable.

The Library is over the main entrance. In recognition of the gift of its fittings in memory of the late William Morris Hunt, it has received the same of the William Morris Hunt Memorial Library. The books are not from Mr. Hunt's filterry, but are the collection gathered by the Museum during the past forty years. The pictures and topestries on the walls are also from the Museum collections. The Library stack is not open to visitors.

The William Morros Hunt Memorial Gallery, containing paintings and drawings by Mr. Hunt, is over the Library, and is reached by the elevator at the right of the entrance hall.

(249)

The Museum is open free to all every day in the year, excepting the Fourth of July, Thankestving Day, and Christman. Hours on weekslays, a A. M. to J. P. M. (November 1 to March 1, § P. M.); Sundays, 1 to 6 P. M. Children under ten years of age are not admitted unless accompanied by an adult.

The doorkeeper will cheek canes and unbreilas, also when possible cloaks and packages, without charge.

At the Sales Office, to the right after possing the tarnatile, the publications of the Museum and photographs of objects may be purchased. A Victors' Book for the entering of names will be found on the deak. Communicated suggestions will be gladly received from visitors. The use of a wheel chair in the galleries may be obtained without charge on application here; with an attendant the charge is \$1.00 per hour. Apply here also to see any officer of the Museum. A public telephone will be found here, and the City Directory and Railbray Guide may be committed.

The Restaurant in the basement of the Japanese wingreached by the corridor to the left from the main cutrance, is open to valitors from noon until 4 P. M. (a hot funch from moon to 2 P. M.) daily, excepting Sunday.

At the branch telephone exchange at the cod of the corridor to the left from the entrance hall stamps may be obtained and letters posted.

The public lavatories are reached from the transverse corridor back of the main stairs (women to the right, men to the left).

All articles are received at the business entrance, reached from Huntington Avenue by the pathway west of the Museum building or by the driveway beyond the School building.

#### DOCENT SERVICE

Upon request envescriatives of the Museum will accompany visitors in the gallerus for the explanation of exhibits. For appointments apply at the affice of the administration (A in Plan on back cover).

For talks and special guidance on Sundays consult the Bulletin Board at the Huntington Avenue entrance.

# EGYPTIAN ART

THE collections of the Egyptian Department offer to the visitor ample opportunities for the study and enjoyment of Egyptian Art. The nucleus of the collection is the portion known, from its donor, as the C. Granville Way Collection, which was presented to the Museum in 1872. Liberal gifts from private individuals, the returns from contributions to the Egypt Exploration Fund and the Egyptian Research Account, and the "finds" of the several successful expeditions which the Museum has sent into the field, have since then greatly increased the collection.

Egyptian art is, through its long course of nearly five thousand years, the continuous expression of the creative spirit of a single race. This race, homogeneous and strongly individual, both in its physical characteristics and its culture, gained during the first of those five millennams a perfect mastery over the bard materials of the earth, and worked out thereafter one of the two great civilizations of the ancient world. Egypt in the south and Babylonia in the east, powerful in their influence on the classical world, represent the sources of our mostern culture.

Handicraft is but one phase of culture. Its products, the only tangible remains of the early life of the Egyptians, finisely for us the characteristics of the race and the culture. It is from these products of the immolerafts that we must build up not merely our knowledge of the technical methods of the Egyptians, but also the interpretation of their intentions and of their appreciation of those objects which appeal to our

as masterpieces of art; for it is to be distinctly borne a must that the study of Egyptian art must be approached from a strictly historical standpoint unhampered by modern ideals. So only can it be fully under-

stood and appreciated.

The land of Egypt is a long, narrow valley of extraordinary fertility, lying between two rocky deserts. The valley owes its life to the Nile annually bringing down from Central Africa and the Abyssinian hills a rich silt, and saturating the soil with moisture. climate is that of the dry desert. But neither climate nor landscape is so monotonous as seems at first sight. The desert is not a waste of sand, but a high plateau of rock broken by hills and ravines, and crossed by the fiercest of wind storms. The sessonal changes are marked. The effect of elimate and landscape on the chameter of a race is an intangible thing, difficult to estimate and easy to exaggerate. But the effect of the conditions of life forced on the buhabitants by the physical character of a country is a thing which may be calculated with a certain amount of precision. In Egypt agriculture, eattle mining, and shipping are all predetermined as the earliest elements of life. So also the architecture was dependent on the simple necessities of the climate and the available materials - ceeds. wood, mud-brick, and stone. The other natural resources, hard stones, metals, and other minerals, are bound in turn to stimulate the growth of technical skill and to influence the conditions under which the culture develops. The river farmishes the constant easy means of communication which always permitted the distribution of products and of knowledge, and maintained the lumogeneity of race and ensure during all periods. The deserts on each side prevented the rise of any power near enough to threaten the national character until it had reached its highest forms.

In this isolated, unchanging, and life-sustaining

environment, we find at the earliest dawn of Egy dan history a race of almost neolithic savages living in a tribal state by means of agriculture, hunting, herding, and simple hamli-

The western and implements are of flint and alone, Woodearving, basket-making, tanning, and pot-making are fully developed. The products of all the handlerafts show the same characteristics which mark Egyptian art as a whole - justience and courage in treating the hardest materials, simplicity and sense in the selection of practical forms, a facility in catching the characteristic lines of animals, and a love of mish. More than all this, the products of these primitive arts show a devotion to utility which was never but. In this early period we see the beginning of Egyptian art and Egyptian technique. The nuthods of working the stone maccheails, vessels, and slate paintspalettes in animal forms are essentially the same as those employed in the reliefs, statuary, and stone vessels of later ages, The beginning of drawing, painting, and ornamentation are found in the line drawings on the pottery, the white line decorated pottery, and in the busket-work milterns.

The first advance was brought by the invention of copper working, probably the 1000 B. C. greatest of all discoveries in its effect. Within a few hundred years at most, after the introduction of copper weapons, the Egyptian tribes were forced into a political union under an absolute monarch. The use of copper implements, the discovery of beds of minerals, the invention of the stoneborer and the bow-drill; the development of a canal system, the invention of writing for administrative imposes -all contributed to a great na-2000 B. C. tional prosperity, whose resources were at the disposal of a single royal family. In \$400 B. C. the service of the needs and of the estentation of this

fam. , the old mud-brick architecture was transposed into ship architecture, while painting, sculpture, and all the handicrafts were developed to their highest point. Thus during Dynasties IV and V Egyptian culture in all its phases, including art, reached its culture in all its phases, including art, reached its culturation. So for us technical methods are concerned, the Egyptians learned little after this period except glass-making. The canon of proportions, the rule of frontality, all the usual compositions were fixed. The different orders of columns, the square pillar, the palm, the nymphase caerules, the nymphara lotus were sit in use, as well as the true vault, the barrel smilt, and the corbel vault.

After this culminating period the products 1500 B C. of Egyptian art vary in number and beauty 1300 H. C. with the varying economical and political conditions of the country. But the technique remains the same, and the old excellence is seldon equalled and never exceeded. The great changes came in the New Empire, when contact with Asia, the Mediterranean Isles, and the east coast of Africa brought in new subject-matter the horse, buttle seenes, new animals, new plants, strange men. The greatest change of all came in the time of Akhenaton (Amenophis IV), as a reflection of the religious reform made by that monarch. But here again the change was due to subject-quatter rather than to any modification in the character of Rayptian art. The art was always practical and realistic. The physical type of the god-king had always been the ideal type. The use of the degenerate form of Akhematon as the ideal type startles us, but is only in conformity with olden practice. So als the relaxation of court forms and dignity under this strange man a faithfully represented in the reliefs quite in conformity with the rales of the old art. Thus it is that the return of the old established social and religious order under Dynasty XIX brings back the old forms

of the art. In fact, the whole work of Akt aton appears more a question of political economics than of religion or of act. That king, far from being a religious dreamer, was a politician who felt the closing grasp of the Amon priesthood on the monarchy, and attempted to break the financial power of that priest-He failed, and the succeeding dynasty saw the domination of the priestly power over the monarchy, The foreign possessions 601 H. C. were lost. Egypt fell a prey first to the mercenaries brought in by a feeble, cruel, and avaricious priesthood, and then to foreign conquerors, Ethiopians and Assyrums. In 663 B. C., for the last time, a strong native monarchy was reestablished under Psammetic I. and Egypt turned with enthusiasm to the forms and ideas of Egypt of the Old Empire, Egypt of the period of the columnation of its culture. When the old pricathoods were revived and the old titles of honor, whose forgetions were forgotten, then also the old monuments were copied and imitated, but with a certain sweet delicacy, a certain effeminacy and aestheticism which were impuly lacking in the old art.

This remaissance period ended practically with the Persian conquest in 523 B. C. Egyptian culture chang tenaciously to its fixed forms through the Ptolemaic period (332-30 B. C.) and the Roman period (30 B. C.-300 A. D.). It lost its identity with the introduction of Christianity. The last stand made by civilized pagamism against Christianity was in the Isia Temple at Philas, where the services were maintained as late

as the fifth century after Christ,

Wind Implements, Lovelyn ste.

Perdunus

The collection of objects from the prelynastic period is small but fully characteristic. The beautiful chipping of the flint weapons and implements, the wonderful finish of the stone mace-brads and ceasels, show the highest technical skill attained by neolithic man. The copper harpsons, imitating in form the bone harpsons, are among the earliest examples of metal work found in Egypt.

White Line Decurated Pattery

Prolymater

The pottery vessels of red-barnished soft brown ware, decorated with drawings in white or yellow lines, belong to the early prelymastic period. They are contemporaneous with the flint implements. The drawings show the very beginnings of the art which produced the later pointings and pointed reliefs.

Red Line Described Pottery

Middle Predynauli

The pottery vessels of hard, fine, pink ware, decorated with drawings in red lines, are characteristic of the copper period, and mark a decided improvement in the material used in the pottery. The color of the line drawings has been changed from white to red to obtain a contrast with the lighter background. The symbols introduced in the standards on the boats are the symbols used later to designate the deities of the tribal noises, and they represent the very beginning of the invention of hieroglyphic writing.

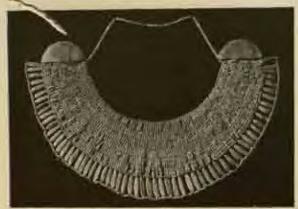

Portrait Status in Wood of Somedon-it-Mahy .

Dynasty VI

This state—has been compared in artistic quality with the Dynasty IV statue of Sheik-el-Beled in the Caine-concount, which is the most famous wood-carving from Ancient Egypt.

A coat of this status may be seen in the Study Series on the ground floor.

Gold and Frience Norklace of Im-Thopy

Dymnity 1'1

This unusual necklace was found in the tomb of Im-Thepy at Gim. Other objects from his tomb, including his inscribed alabaster head-rest and copper accificial vessels, may be seen in the same case. His wooden coffin is on exhibition in the Study Series.

Colored Statuettes of Pink-khannel and his Wife Hyunsty V

This pair statue of a common priest of Dynasty V and his wife is exactly like the slate pair on page 17 in grouping and attitude. It was found in the matter chamber of the mastaba of Ptah-khenuwi in the cemetery of the priests of Cheops. In Dynasty V the funerary priests of Cheops utilized the streets and open places of the royal cemetery as sites for their own tombs. Ptah-khenuwi was one of these, and his statues abow the impulse given to private art by the execution of the great masterpieces of Dynasty IV sculpture. The man who made this pair statuette had almost certainly seen our Mycerinus statues and had

perms worked as an apprentice with the Mycerimus sculptors. The statectics were intended for pertraits, as was required by the purpose which they served. The stone is limestone. The conventional colors show the finished aspect of all Egyptian statuary, and make us realize how fortunate it is that the color has been leat from our great masterpheres.

Personal Head of Limentons Dynasty V

The small head of horestone (134 melies high) throughout the Old Empire this material was greatly favored by the scalpton shows well the climax reached by the artists of the Old Empire in making small portraits. The face is that of a man in middle life, and shows an unimary, matter-of-fact person, fairly well conditioned. and viewing the world goodnaturedly. The type of head is totally different from the patrician of the IV Dynasty shown on page 26. earlier portrait is cleau-cut and pristogratio; this small head is that of some man one can easily busgine to have worked way up from the renks.

Magical Sit of Cheops

Dynasty TV \_

Sets of magical implements have often been found in graves of the Old and Middle Empires. The set found in the Valley Temple of Mycerinus consists of dummy vases and a flint implement called a preschketwand, bearing the two names of Cheops. This wand applied to the lips of the dead man enabled him to speak and recite the magical formulas necessary to a happy future life. The objects of this act furnish a striking example of the wonderful power over hard atone possessed by the workmen of this period.

Ceremonial Stone Versale

Dynasty IV

In the prelimastic period stone tessels were very rare, because of the labor involved in hand carving and the difficulty of getting suitable blocks of stone. During Dynasty 1, when the use of supper implements had come to its full effect, stone ressels entirely replaced the fine pattery vessels, undoubtedly owing to the opening of the quarries and the invention of the weighted stone borer. In Dynesty III vessels made -ne the patter's wheel appear for the first time, and in the succeeding dynasties the wheel-made pottery cessels replaced the stone vessels in daily use. But for many purposes stame vessels as objects of hixnry still continued to be made, especially as ceremonial vessels for the graves of kings and nobles. The series of ceremonial stone vessels from the Valley Temple of Mycerinus show the great variety of stones at the command of the artisans of Dynasty IV -alabaster, several kinds of limestone, diorite, syenite, granite, besalt, porphyry, slate, crystal, and breechia. The outside appears in all cases to be formed and finished by hand. Some of the undressed vessels show a pounded surface similar to that of the unfinished statucttes. The inshle was bored out with the weighted stone borer or by the copper cylinder borer, though certain parts were rubbed out by hand. A few of these vessels which bear the names of earlier kings, and some others which are of archaic form, were probably taken from the temples of earlier tunds.

State Group : Mycerians and Hie Queen Dynasty IV

The collection of Old Empire scripture comes from the excavations of the Egyptian expedition sent out by Harvard University and the Museum of Fine Arts. This expedition worked during the period 1903 to 1910 and the pyramids of Giza, and was especially successful in the excavation of the temples attached to the Third Pyramid, built by Mycerinus about 2800 B. C. Half of the statues found became by law the property of the Khedivial Museum and half are now in the Museum of Fine Arts. The importance of these statues for the history of Egyptian art lies not merely in their beauty, but also in the fact that they are the first mesterpleces of the great creative fourth dynasty to be dated beyond dispute. They have enabled us to remove the uncertainty regarding the date of the royal statues of Chephren and to identify the Sphinx as a portrait of Chephren. The unfinished statues show the technical methods of the Egyptian workings, and the finished statues reveal the artistic intentions and the ideals of

the master-sculptors.

All Egyptian sculpture, both statues and reliefs, served a suspose which to the Egyptian mind was perfeetly practical - one may say, utilitarian. The whole race believed in a life after death, a ghostly duplicate of life on earth, but with added necessities and dangers. The statues were intended to be exact facsimiles of the man to furnish an abode for the soul. The reliefs were intended to provide his soul with spirit-food, spiritdrink, and spirit-clothing. Consequently, the whole sculpture is pervaded by an exact, panistaking realism. This realism, commanding the wonderful technical skill of the Egyptians, produced the exquisitely modelled portraits now in our collection; but, on the other hand, hampered by the crudeness of the Egyptian some of color, the same realism demanded that this fine modelling should be covered with simple, conventional colors. When finished so as to fulfill the desired practical magical purpose, both statues and reliefs presented a crude, gaudily-colored aspect which robbed them of much of the beauty which the ancelored stone now has for modern eves.

Upper part of Slate Group; Myserieus and His Queen Dynasty IV

The slate pair, representing Myccrinus and the Queen, is the fixest example of Egyptism pertraiture in the Maseum. In all the world, it is rivalled only

by the diorite statue of Chephren in the Cairo Museum. The face of the king alone has received the final polishing and the rost of color of which traces may still be seen, especially about the ears. The rest of the two figures is more or less unfinished, in spite of the fact that the modelling appears so perfect. The royal amens on the forebead of the king is wanting, yet the personal qualities of the face are sufficient to convey a strong impression of royal dignity and consenuances of power. The queen's face is of rare womanly leveliness. We are, undoubtedly, looking at the living faces of a royal pair.

The Slate Group as Found

Sected Statustic of Merylo Akst-Neart, Superintendent of the Royal Gardens. Dynasty V. From 6520

A portion of the mastaba in which this statue was found, comisting of a wall of the outer chamber with the doorway to the inner chamber, is installed behind it in the gallery.

Hend of Alubanter Status of Myrerians

Dynasty IV

The large alabaster statue of Mycermus is in a fragmentary condition; but the remarkable workmanship of the parts preserved stamps it as the greatest known masterpiece of Egyptian sculpture. It was completely finished, but fortunately the traces of the black board and hair are all that remany of the coloring. The modelling of the knees is anatomically perfect. The face presents a version of the Mycerimus face, slightly different from that of the slate pair. It is either the work of a different artist or the face of Mycerimus at another period in his life. There are also two versions of the Chephren portrait with a similar difference. This statue was worked from a single block of alabaster taken from the Hat-nub quarry.

Alabaster : Head of Shep-us-kaf Dynasty IV

The head of the crown prince, showing the soft immature features of a boy, is fully equal in its exquisite modelling to any of our great masterpieces. The face is singularly like that of Myceriaus, and might even be taken for a portrait of the youthful Myseriaus. But the custom of placing statues of the sons, especially of the crown princes, in the tombs of their fathers is well known; and it is therefore more probable that this head is from a statue of the crown prince Shep-ses-kaf, the successor of Myceriaus.

Enfinished Studenttes of Myceriana

Dynasty I1

When Myceriaus died, the Third Pyramid, the temples, many of the statues, and the stone vessels were unfinished. Shep-ses-kaf, young, harassed by rivals and auxims about his own tomb, completed hastily the pyramid of his father, and placed the statues as they were in the temples. Thus we have a series of unfinished statueties of Myceriaus showing us alx stages in the carving of a statue.

The rough blocking has manifestly been done by sawing, bruising, and rubbing. The artist has marked the statues at each stage with red lines to guide the workman. The later stages have been worked mainly by rubbing. The fifth stage shows a well-modelled poetrait of the king backing only the final polish.

The slate trial opposite is not a relief, but a triple status supported by a heavy slah, a device used freely in all periods of Egyptian sculpture to prevent fractures. The group represents Mycerinus, Hathor, Mistress of the Syemore Tree, and the Hare nome. The inscription before the none figure says: "I have given thee all good offerings of the South forever." That is, this triad was the equivalent of the figures

State Triad Nome-Golden, Hather, and Mycerinar Dynasty IV

bearing offerings found on the tomb-reliefs of princes,

figures which are often labelled thus each with the
name of a district. Originally there must have been
forty-two of these triads, one for each of the fortytwo nomes. Four infact triads were found, all of Upper

Portrait Hand of Sofer

Dynasty 13\*

Egyptian nomes, and fragments of many others of the same material and about the same size. Alabaster fragments were also found, and it may be that the Lower Egyptian nomes were represented by alabaster triads-

In Egypt the greatest artisans were attached to the service of the royal family, and the main line of artistic development is always found in the work done for the monarch. Yet all work follows as closely as possible the technique and forms of the royal art. It is of interest, therefore, to have the portrait head of the "Treasurer of the two Magazines of Silver," Noter, of Dynasty IV, as an example of the better private art of that period. This head was found in the burial-chamber of the mastaba in whose offering-chamber we found the relief of Noter reproduced on the opposite

page. Heads of this type were intended to be used as magical substitutes for the real head in case the latter was damaged. The purpose of the head required, therefore, that it should be an exact portrait; and the strong, bony features here represented carry conviction of their truthfulness. The head seems to be rather rough in workmanship, but it had probably been finished with plaster, traces of which are still visible.

Portrait of Nafer in relief

Dynasty IV

Relief from Touch of Nofee - Toyonsty IV

Relief-work reached its enhantation in Dynasty V and examples of Dynasty IV relief are uncommon. The earlier reliefs are very low and delicate, while those of Dynasty V project distinctly above the backing ground and are boldly modelled. The block of white limestone with the figures of the Treasurer Noter, an offering inscription, and the figures of four of his scribes, is not only a typical late Dynasty IV work, but it also affords one of the proven cases of portraiture in relief. The striking facual characteristics of the magic head of Noter as seen in profile are reproduced beyond dispute in the profile relief on the slab. The fourth scribe represented is Sennuwica, probably the same man whose affering-chamber is reproduced in the next illustration.

Relief from Touch of Sammucky

Dynasty V

The mastabs of Nofer occupied a site in the royal cemetery. Behind it, in one of the open spaces of the cemetery, a tomb of Dynasty V had been built for a mayor of the "City of the Pyramid: Glory of Cheops," Sensuwka. The northern false door in the west walt of the offering-chamber of this mastabs is here reproduced. The reliefs were never entirely fundhed, and show clearly (on the right) the preliminary outline drawing in black, the chiselling away of the background, and the rubbing of the reliefs. The lines do

not show which were used in carrying out the canon of proportions, yet it must be assumed that the same canon was followed as in other Dynasty V reliefs in this cemetery. A vertical line was drawn for each human figure, and dots were placed at fixed distances on this line to mark the lances, the waist, the navel, the breast, the mark the lateral measurements. A comparison of the various knewn preliminary drawings shows that the human standing figure, from the top of the forchead, excluding the crown of the head, to the soles of the feet, was divided into six spaces, each equal to the length of the foot. This same canon, later with eighteen divisions instead of six, was used throughout the course of Egyptian history.

The reliefs were finally colored as in the mustabas in the middle of the hall. The Mayor Semmwka is an itoubt the same man as the fourth scribe of the Nofer relief, but advanced in office after perhaps therey years

of public service.

Seem on Mantales Watt

Dynasty P

The name "mastaba" is a modern Arabic word designating the low adobe beach used in the houses of the peasants. It was first applied by Mariette's workmen to designate the superstructures of the Old Empire tombs, rectangular masses with flat top and aloping sities, and has been adopted by Europeans as a technical term for such tombs. The mastabs tomb has many different forms, but all present the same functional parts: (1) a burial-chamber underground for the protection of the burial, reached by a stair, a sloping shaft or a vertical shaft, and closed forever after the burial; (2) a superstructure containing an

offering-place, a meeting place for the living with the dead. As these parts were functional, they varied in form with the growth of the knowledge of masonry: and the mastalass from Dynastics I to VI reproduce exactly the history of Egyptian architecture. During this whole period, the mustabas, like the pyramids, are orientated parallel to the valley, with the offering-chamber on the valley side on the southern end of the superstructure opposite the harial-place. In other words, the mustabas on the east bank face west and those on the west bank face cast, that is, ther face the offering-bearers coming up from the valley.

The offering-chamber, or chapel, was first built inside the superstructure in the reign of Chepbren. The form of interior chapel used during Dynasty V is that shown by the two mastaba chambers from Saqqarali. Hidden in the filling of the mastaba, adjucent to the offering-room, was a second chamber for the staturs of the dead and his family. This statur chamber, called a "screak," was scaled up but connected by a small slit with the offering-chamber. The statures faced this slit, which was intended either to allow the spirit of the offering to penetrate to the noul in the statures or to allow the spirit of the dead to visit the statures.

The offering-chamber usually has one or two symbolic doors, "false doors," on the side towards the burist-chamber, which in the earliest known forms are copies of the wood-roofed mod-brick doorways of the Early Dynastic period. The round har at the top of the stone niche is a representation of the first log of the roof over the doorway. It is this symbolic door, first built of mod-brick, then of stones, and later of a single slab, as in our mustabus, which finally degenerated into the simple grave atome, or funerary stelle. The symbolic door bears on the sides the name and titles of the deceased with an offering formula. Above he is

represented scated at a table of offerings. Sometimes the middle panel is carred to represent a wooden door, and in one he two cases the deceased in shown in the act of coming out; for it was through this shor that the spirit was supposed to pass to and fro between the grave and the world of the living; and a series of magical texts to assist him in this act are known, called "texts for coming forth by day," That is, in fact, the title of the so-called "Book of the Dead." The other reliefs on the walls of the offering chumber were supposed in some way to provide the spirit with the enjoyment of the earthly scenes there depicted - sowing, reaping, inspecting the cattle, sacrifice, and feasting. magical value of these scenes depended on their realism. and in spite of all their technical deficiencies, these Egyptian seenes are plansible and lifelike, Nor, as is often stated, did the emiptor hesitate to depict moving figures, such as the man ranging with two heavy pails of lice fish in the top row of the papyrus awanip scene, and the flying birds in the same scene. Yet there is no true perspective, and the difficulties of the side view of human figures were never overcome.

The coloring of these reliefs is partly preserved and shows the conventional scheme of red, black, white, blue, green, and yellow, universally used in Egypt. Shades are prectically unknown, and the painting without relief is flat. One may almost say that the painting is merely colored drawing, owing its whole charm to the clear, graceful outlines. The colored drawings, if one may be allowed the term, are earlier than the colored reliefs, and the mecolored drawings are still earlier, so that it may be said that the colored reliefs are an advanced form of colored drawings, an almost unconscious attempt to gain plasticity. Probably the Egyptian artist strove for his effects in a practical rule-of-thumb manner, without much theorizing; but, as a matter of fact, his relief-work was

an accessory to the painted drawings. It gave a plasticity which his crude sense of color could never attain, and produced the similitude of life which was the aim

of all his efforts,

The variations in the workmanship of some parts of these mustabas are largely due to the different kinds of stone used. The soft, yellow limestone and the brittle nummeditic limestone are from the local quarries. Unsuitable to fine work, they received a plaster dressing which has largely disappeared, carrying with it the finer details. The best preserved parts are those unstressed reliefs carved on the fine white limestone sists quarried across the river at Turah. As is usual in such large pieces of Egyptian work, some parts have been reworked and some were never finished.

The offering chambers, no matter how claborate their reliefs, were dark, narrow cells lighted dimly by one or two allt windows. On the set feast days the relations of the dead came with their offerings of food, which they placed before the false door. Offering formulas were recited to seeme the use of the food to the spirit of the dead. The offering finished, the visitors went away, locking the wooden door and leaving the room allent and descrited until the next feast day.

Figures at Ease of State

Dynasty V

Papyrus Hondle-Column Dynasty XII

The most striking sechttectural features of the great Egyptian temples are the colournded courts and the balls of columns. The stone architecture of Egypt was a secondary direlopment The mud-brick architecture with western acceptanties was fully developed -manuary, arches, columns - during the feat two dynastics, and this mul-brick architecture was transposed into stone during the third, fourth. and fifth demestics. Thus, most of the forms and details of the stone architecture are imitations of the older mud-brick architecture. It is therefore no accident that stone colminus imitate the pake logs and the mud-smeared bundles of plant stems used as roof supports in the earlier days. The bundle-columns represent bandles of nymphace caerules steam, nymphase lotus (not the Indian. lotus) stems, and papyrus

stems. The capitals are formed to represent bads or flowers—usually designated "closed" or "open capitals." The paperus column with open capital is often called by mistake a lotus capital.

A full exposition of the types of columns may be found in Borchardt's "Pflamensaule."

Status of an Egyptian Ludy Named Sennuny Middle Empire From Kerma

This important status fills a gap in the collection, which bitherto had no representative examples of Middle Empire scalpture.

Statuette

Dynasty XI

Statuette

Dynasty XI.

The colored wooden figures represent a phase of the private art of Egypt, which is of archaeological rather than of artistic interest. During the decline in prosperity, following the extravagance of the pyramid age. the great mastain tomb gave place to the simple rockcut tomb. The functions of the reliefs and of the statues were assumed by a simple stele and by small wooden models and figures placed in the burnst-chamber. These figures, soldion more than mediacre in excention, are usually crude and merely conventional representations. The figures shown above are both from the early Middle Empire cometery at Assist. One is a woman bringing offerings, the other is an attempted portrait of a priest.

Somethi

Top row, left to right: fatence scarab of Dynasty XVIII, showing typical scroll work; scarab with name of Horas; large pottery scarab of Uscriescen III; Dynasty XVIII scarab with eartouche of Thothmes III on the Bark of the sun; scarab of Amenhotep II. Middle row: basalt "heart-scarab"; large royal scarab of Amenhotep III, struck as a commemorative token of his baring killed one bundred and two fious in the first ten years of his roign (there is another example in the British Museum); scrpentine heart scarab, finely cut, but uninaeribed. Bottom: late (Ptolemate) fatence pectoral, or scarab which was placed on the breast of the munmy.

Partrait Head

Dynasty XVIII

The head shown above is from a squatting private statue of the New Empire similar to that discussed on page 41. The limestone is worked to a fine amount surface. The head was colored as usual, and traces of the color may still be seen on its lips. The date is determined solely by the style of the heathlress.

Royal Portroit

Dynasty XIX

The small syenite head shown above is a royal portrait of the New Empire, apparently representing Ramses II. It is to be compared with the head of the large granite statue of Hamses on page 42, and is another illustration of the persistence of the forms and technique of the earlier sculpture. Originally this head was colored according to the fixed convention.

Status of Parra-hoten

Dynasty XIX

The squatting statue of Pa-ra-butep, of gray granite, is a typical example of New Empire sculpture. The technique, and even the form, is that of the earlier work. The difference lies simply in the dress. The men of the New Empire were a longer garment and dressed their wigs in a slightly different manner. It must not be forgotten that all these statues are more portraits intended to reproduce the outward form of the man, and all show the stiff, diguified, but expressionless attitude of the Oriental when posing for a

Seated Granics Status of Romess II Dynasty XIX

portrait. The Egyptian artist represents character only by accident, and never had occasion to attempt the expression of fear, hate, love, or other emotions.

The New Empire, the period of the greatest prosperity in the whole history of Egypt, owed the greater part of lis wealth to the looting of Asia and the Soudan. The founders of Dynasty XVIII were princes of Thebes. and when they drove out the Hyksos and assumed the kingship over Egypt they ascribed their mecess to their local god Amon, and poured their

foreign plander into the treasury of his priesthood. Great temples were built all over Egypt. The Amon-Re priesthood became the most desirable career in Egypt, and Amon-Re became the national god of Egypt.

When Ramses II came to the throne the Egyptians had been open to the influence of Asia for more than three centuries. The land was filled with foreign captives, the gardens bossted of outlandish plants and animals, the palaces held the finest products of Asiatic art, and the market places offered all the wares of the near East for sale. Yet the effect on Egyptian art is

7.

surprisingly small. New subject-matter crops out; a few new compositions, mainly battle scenes, appear in the reliefs; but in general Egyptian art remains what it was—the same in technique, practical and realistic. When the subject-matter is ecremonial, as in this statue of flammes II, the production shows all the characteristics of the Old Empire. Here is a king in the traditional insignis of the monarchy, as he appeared at great court ecremonies. The attitude is almost identical with that of the Mycerians statues, and the method of working was the same. Futcen hundred gears had passed by. Egypt had learned the ways of all Western Asia, but the art of the Old Empire still ruled, the greatest of all in that time.

This statue of Ramses II and most of the art of his time is, however, slightly lacking. There is size; there is an enormous number of statues, reliefs, and temples; but there are also signs of hacte, of carelessness Quality is being sacrificed to quantity. The priest-hosal of Amou-lie is growing in numbers and in power. For much of the surplus wealth is being absorbed by this avaricious organization. In the preceding cruthry, Akhenaton had made his light to break the priesthood, but his successors had lost all that he had gained. From this time forth the division of power and wealth was infinited to the production of great finished pieces of work, and Egyptian art steadily declined down to the revival of Planmette I.

Relief. Non Empire

The relief portrait of a New Empire king shown above is a beautiful example of the best work of that period, hardly inferior to the Old Empire work. This is called a sunk-relief; that is, the backgraund has not been cut away, as in the ordinary reliefs. Otherwise the technique is the same. Sunk-reliefs cost less labor and are especially common in the latter part of the New Empire.

200

The face in the relief bears the characteristics of the Theban royal family,—the almond-shaped eye drawn down at the inner corner, the thin nose with rounded tip, and the face mouth. The type may still be seen among the people of Upper Egypt. On the head is the mysl war-helmet with the arreus.

Support for a Chair in the Form of a Postber Tryonty XVIII

However much they conventionalized the human form, the Egyptians treated animals with fidelity to nature, as may be seen from the purther shown above. It is of wood, coated with hitumen. The purther's stealthy stride is well cought, and the blunt head is admirably modelled. The piece was one of a pair supporting a seat or throne. The apparent symbolism is ancient and is to be contrasted with the use of figures of prisoners for the same purpose.

Wooden Princl. Thathones IV

Dynasty XVIII

The wooden panel in likewise from a piece of furmture, and bears a symbolic decoration, - Thothmes IV as a sphinx trampling the foreign nations. In the case of chariots, thrones, mirrors, spoons, weapons, and almost all objects, the ornamentation was symbolic or magical in character. Images and figures of deities and divine annuals were freely used, each appropriate to its object, - the ugly god of the toilet on councile boxes, the scarabacus on scals, hunting scenes on weapons, and battle seenes on chariots. From the earliest predynastic period, figures of sacred animals were carved on the date paint pulettes and bail a nugical protective force. In later times the use of hicroglyphic writing gave a special significance to almost every object, to every element used in ornamentation. Thus the papyrus stem with open flower, often called a lotus by mistake, has the meaning "to be green," "to be flourishing." It is of interest to note that Thothmes IV is the prince named in the granite stele at the breast of the Great Sphinx as the

one who cleared the Great Sphinx of sand and reëstablished its offerings. The workmanship of the panel shows the soft finish of the best work of the New Empire.

Fillmer

Six Foreign Captiens

Non Empire

The aix faience plates, representing foreign exptives, are wonderful examples of Egyptian handicraft. The ability to see and to copy things as they are has produced in these colored glazes the negro (first and fifth from the left) and the Arab (fourth), just as we see them to-day, though in a different dress. The others, the Philistian (third), the Asiatic, possibly the Libyan, must be equally true to life, just as they appeared disembarking in bonds from the Egyptian war-galleys at Thebes. The plates themselves were inlays, probably from some piece of royal furniture, and are another example of the symbolic ornamentation mentioned above.

Fairnes Islay New Empire

This beautiful head is merely an inlay piece from the symbolic ornamentation of some object. The wig is of glazed pottery and the face of glass paste. The features are distinctly those of the royal Theban family of the New Empire, as may be seen by comparing it with the relief on page 44. This piece, together with the figures of captives, is said to have come from the palace of Hamaes III at Medinet-Haba, opposite Thebes.

This great royal searab comes from Dynasty XIX, and bears two of the mames of Seti I. alternately repented. The workmanship, size, and condition of the specimen make it the finest example of its class in existence. It is unde with a greenishblue glaze, hid on rather thinly. The fine shows Imora of gold leaf, which indicate that at one lime the whole face of the sourab was gilded, while the

Face of Large Sevent

specimen is bound with strips of pale gold, to which a ring for suspension is attached in front. The modelling of the beetle is particularly lifelike and free from convention.

be seen from the second cut, in pro-

Statustic of Herolaf Dynasty XXIII

Gold was one of the first metals worked by the predynastic Egyptians and was always a favorite for amalets, charms, and ocnaments. It is even possible that copper was discovered in some attempt at extracting gold from copper ore. In the archives of Amenophis IV, at Tell Amarua, a number of letters in empiform script were found in which the kings of Babylon beg Amenophis for gold, saving: " Gold to as dust in the street in the land of our brother." The chief mines, now exhausted, were in Wady Alaqi, in thr cantern desert, where the ancient worktings, the crocibles, and smelters may still be seen.

The gold statuette of the god Hershel, found at Hierakleopolis, is a rare and

beautiful example of goldsmith's work. It is from Dynasty XXIII and bears a votive inscription in minute hieroglyphies on the base.

Gold Pertonal Ocumunt

The statuette above is an example of carved gold work; the anulet in the form of a ba-bird, or soul in the form of a bird, is an example of the more usual beaten gold work.

Cut Shin Garmand.

Dynasty XVIII

Did no other immument of Egyptian antiquity remain to us than the cut gazelle-skin garment shown in the above plate, both the industry and the skill of the artisans would be convincingly attested. The piece, which is only half of the complete garment, was found with a similar one in the tomb of Matherpri, a prince of Dynasty XVIII, and a cup-bearer of Thothmes IV (1456-1427 B. C.). The meshes are made cutirely by cutting slits in the skin, and then stretching it laterally. At the shoulders, where seams are visible across the borders, are two piecings, the meshes being tied with microscopic knots.

11519

Profile of the Same

The last great period of Egyptino art began about 700 B. C. After the time of Ramses III (about 1200) B. C.), the power of the monarchy was gradually osurped by the high priest of Amon-Ra. These avaricious and unwarlike theorets abandoned the foreign presenting and utilized Librar mercenaries to hold the Egyptian provinces in subjection. First the Libyans wrested the throne from their employers and fell themselves before the rising power of the Aethiopian kings-Then the Assyrians, enjoying the profits of the conquest of Western Asia, drove out the Acthoplans and held Lower Egypt as a province. In 663 B. C., at a moment when the Assyrians were preoccupied by toternal trouble; a certain prince of Sais using Greek mercenaries established himself as king of all Egypt under the name of Panametic, the first of that name: During the long period of foreign domination, the national conscionances appears to have been awakened. The Egyptians, surrounded by the manuments of their ancient greatness, remembered and attempted to revivity the past. Pricate were appointed to renew the functor?

services of Cheops and Chephren. Old texts, sometimes only half understood, were copied, and many a a word is found resuscitated after exitures of disuse. Manaments of the Old Empire were taken as models of the best in art. The forms were copied with a finish which rivalled the best Egyptian work. This is the dominating quality of the Saite art—it is the instation of the forms of a sincere, realistic, older art carried out with the old technical skill. A certain idealism is thus brought in—a belief in qualities no longer seen in actual life. For all ceremonial works, where the reliance on antiquity was greatest, there is a delicacy of treatment, a softness of outline which seems to indicate some measure of aesthetic feeling. But in some cases, such as this portrait of the priest in

Portrait of a Prical Saits

hard green atome, the old demand for realism still persisted and was obeyed with all the old fidelity to truth. Just as in the days of Mycerimus, a form of the earthly man in imperishable atome was needed for the use of his ka or soul, and just as the ancient artist reproduced the bulging eyes and puffy cheeks of the builder of the Third Pyramid, so the Saite artist, equally unafraid, portrays the defects and the cruel lines of the erafty priest of his day.

Mammy Portrait Painted in War on Wood First or Second Centery A.D.

From a burying-ground at El-Rubayat, in the Province of Fayum, this portrait is a specimen of the encustic paintings on thin panels of wood which in the Gracco-Roman period were substituted for the plastic representations of the face of the dead used on mammies of earlier times. The panel was laid over the face of the monney, and the outer bandages were wrapped about it so as to cover its margin. Fragments of the cloth still adhere to the present portrait.

Coptle Chain

Roman and Byzantine Periods

Glass-making in Egypt goes back perimps to the Middle Empire. The early vessels are all opaque and variegated in color, and seem to have been made on a core which was afterwards broken up and shaken out. Colored glass pastes were also used for beads, inlays, and grinding blue and green colors; but clear glass seems to have been entirely a foreign invention, appearing first in Ptolemaic-Roman times. The pieces shown are from Coptic times and show many forms found in Syria in the same period.

Rolling of King Assur-native pal

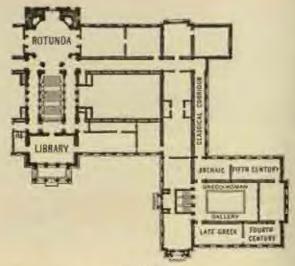

The figure of a winged god, a relief from the palace of Assur-nazir-pal (about 889-859 H. C.) is a characteristic example of formal Assyrian sculpture, though by no means of the best. It shows the same practical magical purpose revealed so universally by the Egyptian reliefs. The eye is full, as in Egypt; but some

of the difficulties of the profile view. - the feet, the shoulders - have been more or less successfully bandled. Yet the heavy outlines, the cruste mostelling, and the lifeless conventions deprive the whole of grace or even plausibility. In the fourth millennium before Christ the primitive productions of the two civilizations, Egypt and Balwlonia, show almost equal technical skill. Both nations had a similar economic development in a rich agricultural valley. In both cases the art developed as much in the service of magic and religion as in that of the needs of daily life. Even the materials available for architecture and sculpture were not very different. Finally, both mees were largely Semitte in origin and lived in contact with each other from 1500 B. C. to long after the period of Assur-nazir-pal. Yet Egyptian art, sincere and eertain in its truth, has left a series of great musterpieces, while Babylonian art has only succeeded in arousing currosity and archaeological interest.

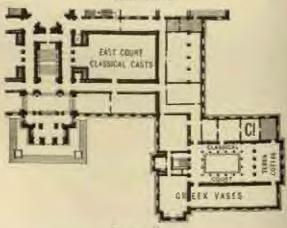

## CLASSICAL ART

SINCE the time of the Italian Remaissance, when men turned to the remains of antiquity with the enthusiasm of discovery, classical art has held the same high position as has been accorded to classical fiterature. The best examples of Greek art, however, waited much longer for recognition and appreciation than the masterpieres of Greek poetry. The sculptures with which princely and ecclesiastical dilettanti of Italy adorned their palaxes and gardens were usually Roman imitations of Greek works, suggesting in only a limited measure the significance and

vitality of the originals.

The opening of the pearer East to archaeological exploration has restored to the modern world provies examples of original Greek work, representing the ideas and the technical achievement of many generations, and has enabled students of antiquity to attain a truer view than ever below of the essential qualities of ancient act. They have learned, for instance, that in real Greek sculpture beauty does not imply monotopous smoothness of form or coldness of expression: that dignity and repose are not inconsistent with thorough animation. They have learned not only to admire and enjoy the art of the "classical" period in the more restricted sense of the word, but to accept with sympathy and pleasure the work of earlier artists, whose struggle with conventions and technical difficulties makes only the more effective the sincerity of their effort for vigorour expression of ideas about gods and men; while the discovery of important sculptures of the Hellenistic period has revealed in late Greek art an individualism and a dramatic power which are sometimes supposed to be exclusively modern.

1. Prehistoric Art of Greece, 3000-1000 B. C. In its period of highest development and of decline the prehistoric art of Grosce is generally called "Mycenaean," because it first became widely known through the excaration of Mycemae. The civilization which produced it probably centred originally in the island of Crete, whose position and resources brought its early population the power and wealth that are echoed in the tradition of Minos. King of Capason. The art of these prople shows at its best an admirable skill in decorative design and a freedom of style approaching naturalism, even though its method is far from exact representation. It reflects no ideas of profound interest, but phenomena of marine, animal, and even human life are presented vividly and freshly. The work of this period is exemplified in the Museum by an ivory statuette (p. 67), by a peries of vases in stone and pottery, and by a few seal-stones,

H. Archoic Greek Art, 1000-500 B. C. The long decline of Mycenaean art, due to political and social changes which accompanied the shifting of population in Greece about 1000 B. C., was succeeded by the development of the art of the historic Greek people. In the plastic and graphic arts their earliest efforts embody but inadequately the wealth of interesting ideas, of which there is such abundant evidence in the contemporary Homeric pocus; they had to learn not only the mastery of tools and materials, but certain elementary lessons in the "grammar of art," in which the older Oriental peoples were their trachers. The pottery of Corinth and Rhodes shows the strong influence which Eastern art exerted on early Greek work in the seventh century B. C. Oriental motives and methods became, however, only the stepping-stones to original expression; the Greek did not lose his independence of vision and feeling, and the characteristic humanism of Greek art is already manifest in the work of the sixth century B. C., though it finds expression chiefly in

works controlled by religious motives—statues of gods, ideal statues of athletes commemorating victories in religious games, and other sculptures dedicated to deities. Within the limits of certain accepted conventions, the later archale sculptures show a marked individuality of style. In this Museum the period is illustrated not only by some interesting sculptures (pp. 68-71, 79), but by branze statuettes (pp. 71, 72, 75), by coins issued by many Greek cities in the aixth century (p. 100), and by painted vases on which the subjects, and in some degree the qualities, of archaic frescoes are instated (pp. 76 and 77).

The Fifth Century, 500-400 B. C. During the years in which the Greek states were rising to their highest military and political power, the technical progress of the arts continued, and the conventions of the archaic period gradually gave place to a free style. The period of transition (480-450 B. C.) is represented in this collection by one of the finest of the few extant originals (pp. 80-83). Adequate representation of the human form in every variety of attitude or action was specially sought; but this representation was not literal. or even individual; it reflected the idea of a type. In its most characteristic achievement, such as the sculptures of the Parthenon, the art of the fifth century may be called social and civic in its motive. It embodies more completely than any other the Hellenic ideal of proportion, sanity, and self-command. The Museum possesses very few sculptures of this date (p. 85), but the qualities suggested above may be studied and enjoyed in the collections of smaller objects; for instance, the beautiful coins of Sicily and Southern Italy (pp. 126, 128, 150), the vases decorated by Athenian pulaters of the fifth century (pp. 89-93), and some unique examples of gold jewelry (p. 88),

- IV. The Fourth Century, 100-300 B. C., was an age in which the older influences of religion and the state waned, and individualism came to dominate Greek thought and action. Artists now more clearly distinanished individual elegracter, and applied their newly attained skill to the portraval of emotional states, even of transitory feeling. The head of Aphredite (p. 97) in the Bartlett Collection in this Museum, though thors oughly ideal in its beauty, has a more particularized character and is more directly expressive of emotion than sculptures of the fifth century. Several other original marbles of the fourth century contribute much to the value of the collection of classical sculpture in the Museum. The head of a goddess from Chica (p. 99). a fragment of a group representing an Amazon on horseback and a fallen opponent (p. 93), and a small figure of a mourning Siren (p. 102), deserve special mentions Attention should be given to the metal work of this time, illustrated by the graceful groups on bronze mirror cases shown in the Fourth Century Room (p. 106).
- V. The Hellemane Period, 200-100 B. C., dated approximately from the reign of Alexander to the establishment of Raman power in Greece, shows a further development of tendencies already manifest in the fourth century. Individualism led to the growth of vigorous portraiture, exemplified by some of the best sculptures in this Museum (pp. 101 and 109). Another mythamologyer matters of sincere belief, were treated in a highly dramatic and picturesque style. Appreciation of the charm of generatypes and scenes is shown in the attractive terra-cottes of Taragra (pp. 107 and 108).
- VI. Gracco-Roman Art, 100 B. C. 200 A. D. The strongly realistic style of Hellenistic portraiture was in harmony with the literalism of the Roman mind, and the Roman period is marked by a long series of excellent

portraits, not only in large scalpture (pp. 111 and 12n), but on coins and gense. The decay of original majoration in the arts is signalized by the attempt to revive older styles, as seen in the so-called "archaistic" scalptures of Roman date, and by the more or less no chanical imitation which produced many copies of famous stature of the lifth and fauth centuries. Most of the extant amount mosairs and wall pointings are of this period. They teach is something of the technique of the graphse arts of austiquity, but they do not justify inferences regarding the quality of the best closucal pictures. The arts of favors and of personal adarmment, currents aged by the receive of imperial Rome, are illustrated in some amountly fine cames (p. 110) which have come to this Masseum from two famous European collections.

The following beaks are recommended as interesting introductions to a knowledge and appreciation of Grask Arts. F. Gardiner, Principles of Great Art. E. H. Taried, A thoraxy of Great Art. L. Gardiner, Handbook of Great Scalptons Freder and Wheeler, Handbook of Great Scalptons Freder and Wheeler, Handbook of Great Scalptons in Great in convenient form by L. Whiller (add.), Companion to Greek Station. These books, and many detailed studies of the accurat departments of ancient art, as well as books of reference and important persedicals devoted to the handsal art and archaeology, are to be found in the Library of the Mineum. A large reduction of photographs of classical sculpture, including the Brunn-Bruchunno series, in the library. The Mineum publishes a special value of disconting the Library. The Mineum publishes a special value of disconting the Greek and Roman sculpture.

Cybels Marble, about 300 B. C.

This colessal statue is probably to be identified as Cybele, the Mother of the Gods. Traces of the throne or sest, which was not made in one piece with the statue itself, are seen beneath the left arm. The folds of the drapery are arranged in a harmonious composition which is not lost in elaboration of detail.

Statustic of the Cretan Snake Girlden Ivory and Gold, Sixteenth Century B.C.

Examples of scalpture on a large scale are hardly to be found among the relies of Minoan art, but freecors, statuettes, and small reliefs show that the Cretan artists could impart to their representations of the human form the same vigorous life which pervades their decorative designs. In this statuette the proud pose, the keen expression of the face, and the set of the truss, anewy, yet graceful arm compet admiration no less than the technical skill with which the gold trimmings were applied to the elaborate Minoan dress.

Lion

Limestone, Sixth Century B. C.

This figure was doubtless conceived as the guardian of the tomb over which it was erected as a monament. The combination of the front view of the head with the side view of the body and the symmetrical arrangement of the locks of the mane are characteristic of the archaic style which sought striking decorative composition rather than natural representation. It may be supposed that the sculptor knew lions only as they were depicted in Oriental art.

Girt's Himil

Limestone, Sixth Century B. C.

Among the most interesting and popular of archaic statues are the "Maidens," found on the Acropalis of Athensthurty years ago. The head from Siey on, pictured above, has something of their delicacy and charm, although they are of Parisu marble and this fragment is of a coarse-grained finestone. The tapering face, the crescent smile, and the slanting, narrowed eyes, are characteristic of a time when lumian ideas controlled the artistic expression of Greece. In this instance the conventional rendering of the hair is unusually attractive.

Statue of a Man Limentons, Sixth Century B.C.

This figure is a variant from the "Apadlo type" prevalent in the archaic period. The left leg was probably advanced, and the left arm is held down stiffly at the side, but the right arm was slightly bent and may have held some attribute. The chief interest of the work, however, is in the very characteristic rendering of the head. The carving of the month and of the checks, fringed by the short beard, gives the face an air of individuality almost suggestive of portraiture. The gravestone, figured opposite, was found in the Troad. Such slender stone slabs, often decorated with painting or low relief and crowned with delicate arnament, were the usual type of grave mamment toward the end of the sixth century.

Gravedone South Century E.C.

Artemia Sixth Century B. C.

The small bosones form an interesting supplement to the marbles possessed by the Museum, in illustrating the development of plastic art in Greece.

An inscription engraved on the figure here shown tells that a certain Chimaridas of Elis offered it to Artemia Dacdalia. The Dorie dress is drawn smoothly around the figure in front in a way which recalls the form of archaic cult mages; the statuette is probably an imitation of some earlier statue of the goddess. It has the simple dignity of the careful religious art of the sixth century B. C.

Alblete Sixth Contany B. C.

This bronze statuette of an athlete. found at Olempia, recalls the influence which the athletic games of early Green exerted on the art of scripture Athletic victories called for commen oration in sculptural manuacents, and the artist had full liberty to produce a representation of the entire human figure, a liberty which was not allowed in Oriental art. Moreover, games and athletic practice gave him many opportunities to develop his ideal of manhood. It has been conjectured that this figure is a runner. Like must archaic statues of athletes, he stands creet, facing straight abend.

with both feet planted finds; but his

form has been shaped to suggest energy and agile motion.

In the Pelopouneson Hermes was surshipped as the protector of the flocks. The statuette shown here represents the god with a young cam maker one arm. He wears a neutly fitting chittan, a round hat, and heavy boots. He curried in his right hand the symbol of his office as herald. The statuette is distinguished by vigorous modelling expressive of startly physique, by finish of detail, and by the naive animation of the face.

Hormer Sixth Century B. C.

Mirror Michael

About 500 B; C.

The hextry and the fastidious laste of the Ionian Greeks are reflected in this representation of Aphrodite. She lifts have carefully arranged himation with one hand. The hovering Erotes (Cupids) direct attention to the face of the goddess. They are so placed that the support of the mirror appears to be gradually broadened at the top in order to enery the weight sasily.

Amphaen, Geometric Style

About 500 B. C.

The extinction of the Mycensean civilization and the beginnings of the classical Greek are marked by the rise of a pottery elaborately decorated with geometrical designs. The primitive drawings of horses and men which often found a place among these are illustrated by this colossal wase from Athens. (Compare p. 123.)

Omerhoe

Seconth Century R. C.

Greek art of the eighth and seventh centuries is almost wholly imitative of the foreign models brought to Greece by trade with Oriental peoples. The omochoe, or wine-jug, pictured here is an example of the pottery made on the island of Rhodes at this period. The lowest of the three zones of decoration has a lotus pattern derived from Egyptian art; the second shows the pursuit of wild goats by a dog, a seem probably borrowed from the Phoenicians; above are represented animals and monsters of Oriental imagination. The figures are painted in black on a ground of buff color; purple is also freely used in the accentuation of some forms; the heads are drawn in outline.

ALL THE RELEASE AND ADDRESS OF THE PERSON AN

Amphora by Amaria Sixth Connery B. C.

The practice of painting figures in dark color on a light ground was continued by Greek potters until about 500 B. C. Corinthian painters were probably the first to indicate details within the figures by lines engraved through the black paint. This method was further developed by the Attic vase painters of the sixth century, whose vases, excelling others beauty of material and share, and in juterest of color and design, drive the painted pottery of

other cities from the market. Oriental decorative motives became in their turn entirely subordinate to human interest, and scenes from heroic mythology, warfare, and domestic life constitute the chief ornamentation of the vase.

The illustration above pictures an amphora (a twohandled jay) signed by Amusis, who is distinguished among painters of the black-figured style for precision of workmanship and a love of the minute detail obtained by incised lines.

On the opposite page is shown a kylix (drinking-cup) whose ornament is an unusual illustration of a famous story in the Odyssey. The ruchanterss Circs, a mide figure, originally colored white, stands near the centre of the picture, holding in her hand a cup containing the magical potion which has half transformed Odysseus' exempanions into beasts. At the left Odysseus is coming to the rescue. The generally erect figures, radiating from the stem to the rim of the vase, form an effective design.

Imitative modelling in terra-cotta is almost as old as the alapping of terra-cotta vases. Indeed, primitive vases, being fashioned freely by hand, often take a form radely resembling the human body. The small terra-cottas which were produced in such numbers in preliminest Greece seem to have served a religious purpose. They generally represent female figures, and were probably dedicated to a nature goddess. Many dedicatory terra-cottas have been found on such sites as

Wood Carrier Heating

that of the famous temple of Hera at Argos. These early images were hastily made by hand, and often are only caricatures of the human form. From a very early period, Bocotia was a centre of the production and not of terra-cottas. In the archaic period, many were made in a flat shape resembling, it accurs, board-like images of wood which were regarded as specially secred representations of deities. They are often decarated with painted geometric patterns. Some equally primitive statuettes of almost cylindrical shape from Cyprus alar recall wooden images, whose form, in this instance, was probably only a slight modification of the tree trunk.

In the archaic period the art was also applied to genre anbjects. The Museum has several interesting terraculta figures of this character: a harber at work, a woman grating cheese, a wood-carrier resting beside his bundle of fagots (see the cut above), and other homely seems from the life of ancient Greece. There was no lack of terra-cotta toys: little horsemen on long-necked horses, carts, and even dolls with movable legs and arms.

In addition to term-cotta figurines shown in rooms on the main floor, a supplementary exhibition has been placed in the Terra-cotta Room on the lower floor.

Mounted Warrior

Marble Relief, whout 500 B. C.

This relief of the late archaic period was, perhaps, part of a monument commemorating a man of equestrian rank. The rider, fully armed with entries, greates, high-crested beliner and sword, sits firmly and guides the spirited horse with steady hand. The motion of the group is signalized by the cloak blown backward in the wind. The horse's head, which has been broken away, was turned so that it looked out from the relief; this attitude, an unusually hold one in urchaic relief, must have added much to the animation of the work. The treatment of the drapery and the fine modelling of the borse's body suggest that the sculptor was influenced by contemporary Attic art, if not himself an Athenian.

Beroonded Martie Haling, Frant

This marble corresponds so closely in material, shape, and style of avalpture with the famous "Ludovisi Throne " in Rome, that some intimals connection between the two innet be assumed. The scene on the front of the relief in Rome probably represents the birth of Aphrodite; the figures on the wings - a unde courtesan playing the flates and a nutron placing inceme on a censer - are best explained as worshippees, typifying two aspects of the call. On the front of the relief in Boston a smiling, winged boy is represented weighing two small figures of youths in a mir of scales. the beam of which is now missing. Two seafed women are interested spectators; the one to the right bows her head in grief, the other nucles and raises her hand in a cesture of pleased surprise. The single figures on the sides are again probably engaged in acts of worship, and again strongly contrasted; on the right wing a boy scated on a cushion is playing a lyrr, on the left an old woman with wrinkled face and short hair sits on the ground with her knees drawn up and grasps a mysterious object which has been mostly chiselled away. The interpretation of the scene on the front remains as yet in doubt; but the central figure is clearly Eros, and the subject represented is probably some myth conneeted with Aphrodite, - perhaps, as has been sayrested, the contest between Approdite and Perceptone for the possession of the beautiful youth, Adonts.

The purpose for which the two marbles were made is also unclear. It was formerly supposed that the Ludovisi relief formed the back and arms of a colonal throne for the seatest statue of a goddess; but the two reliefs are better explained as parts of one monument, perhaps as ornaments set on the two short ends of a long rectangular altar. The delicately curved volutes

<sup>&</sup>lt;sup>1</sup> Photographs of the meanment in Rome are hing below an adjoining window, and custs of the two markles may be seen in the East Cast Court.

Three-sided Rallet, Wings

and palmettes at the angles of the marble in Boston were matched on its companion-piece by similar ornaments, made separately and now lost.

The sculptures are among the most beautiful and interesting of the "transitional" period of Greek art. The artist has not yet fully mastered the problem of translating the figures into celief. The upper parts of the bodies of the two goddesses are in full front view, while their legs are in profile. Some folds of the garments are rendered to the archate manner, while others show the careful study of actual, accidental folds of cloth. The strong influence of painting is apparent throughout, and the artist evidently descended upon the application of colors to the marble to bring out details such as the lower edges of the wings of Eros and the outlines of the mantles and raps ween by the two goddesses. The strings of the lyre, the fillet of the old woman, and the latchets of the anndals were left to be supplied entirely by paint. The soft, unathletic treatment of the nude forms, the rich draperies, and the style of the architectural ornaments suggest that the reliefs are the products of an lunian school of sculpture.

Marlds Rollet in Museu stells Terms, Roma

Artemie Marble, Fifth Century B. C.

The goddess wears a fillet adorned with simple flowers. She is probably Artemis, one of whose special attributes was a garland of flowers. The head is strained forward a little, with an air of alertness. The finely arched little, with an air of alertness. The finely arched little was contribute to the vivacity of expression which probably was most evident in the eyes. These were of another material colored is imitation of nature.

The head has been considered by some scholars an original of the first half of the fifth century B. C.; other regard it as an imitation of work of that date, made is Roman times. It has, at any rate, an animation and a freshness of style not often attained in imitative sculpture, which generally reproduces only the superficial characteristics of earlier art in rather stilled fashion.

Grave Monument Fifth Century B. C.

The grave manuscrits of the Greeks were important to them as associated with the rites demanded by natural piety towards the dead. In the fifth and fourth centuries B, C they often took the form illustrated here — that of a simple portice consisting of a gubbs supported by pilasters and framing a relief which had reference to the former occupations of the person in whose memory it was exceed. On this atoms is represented an Attic lady, wearing an fomion chitton of delicate texture and a himstian of heavier material. She looks at her mange in a hand mirror similar to some of the Greek bronze mirrors exhibited in the Museum. Like many of the grave-reliefs, it was carved by a sculptor of imperfect skill, but it resembles the others, too, in the simplicity of its motive and in the dignity with which the subject is presented.

This fragment is from one of several replicas of a popular statue of the fifth century B. C., representing Diomedes earrying the Palladium from Troy. A reproduction of a better preserved copy, now in Munich, may be seen among the easts of Greek sculpture. The head resembles a group of sculptures attributed to Cresilias, a Certau who recrived his training in the Athenian school, The square jaw, firm mouth, and level brow portray a stout fighter.

Diamedos Murble, tiruses-Roman Capy

Head of a Youth Marble, Grace-Roman Copy

Of the great sculpton of the fifth century Polyeleis tus of Argos was the most popular in Roman times, and countless roptes and adaptations of his under have survived. This head, perhaps from a statue of Hermen, illustrates the youthful athletic type for which this sculptor was most famed. In the definite modelling of the surface and the sharp readering of details of the eves and hate it repro-

duces, better than most copies in marble, the quality of the bronze original.

The pose of the figure illustrated here does not show a radical departure from the traditions of archaic art, yet it is not tense and rigid like that of sixth century statues, and the freedom of the attitudo pe emphasized by the natural though angular position of the left arm. The outlines are true and refined, and though the surface of the body has suffered by corresion. the quality of itmodelling shows advanced understanding of the subject and skill in represenfation. The statuette is said to have been found on the site of Croton, a

Young Athlete Fifth Century B. C.

town in the south of Italy which was famed for the prowess of its athletes. It may be supposed that the artists of this region had every opportunity to study the athletic form, in repose and in action.

In this wine pitcher the refinement of taste manifinited by the chape attencts attention first, but the ornsment is also interesting as exemplifying the tendency of Greek art to representation, even in decorative design. At the hope of the handle is a siren, with wing a delicately rendered in a form of Oriental origin. At the upper inneture of the handle with the vace la the best of a gord clad in a Doric chiton. A versent

Pitcher Fifth Century B. C.

is represented on the lack of the handle.

Enering

Fifth Chattery B. C.

The technical skill of the Greek goldsmithe is shown in this unique carring. The figures are hollow, and the jewel is of the dightest weight consistent with strength. The details of the chariot are represented with great ears; the Victory even wear carrings and bracelets.

by the wind, and the horses are prancing, yet the composition is balanced and unified. The jewel is almost intest really the colored enamed which filled the palmette in front of the book is lest. It is possible that the carring belonged to a statue, perhaps one of the gold and ivery statues of the fifth century B. C.

Kulin

Fifth Century B. C.

The painters found larger scope for their skill in decorating vases when the colors were reversed, viz. when the background was lilled with black paint and the figures were left in the red color of the clay. This method allowed a free drawing of details which took the place of the hard incised lines of the black-figured style.

The development of the new technique was necompanied by an extension of the range of subjects. Scenes from the palaestra, in which Athenian othletes practised their games, were much favored. The picture here is from the interior of a kylix. It shows a young athlete running with jumping weights in his hands. The figure occupies the circular space effectively, and is vigorously drawn. In its combination of profile and front views it marks a continuance of an archaic mode of representation.

Drawing from a Konthurns

So few vessels of silver and bronse have survived, in comparison with the many terra-cutta vases which have been recovered from graves in Italy and Greece, that it is east to forget in what measure the latter are imitations of metal originals, though their imitative character is munifested in the excessively thin ware affected by Attie patters of the best period, in the alarpes of their vases, and in the lustrous paint.

The cup shown here is obviously modelled after a metal kantharos of exceptionally beautiful, though simple form. The tall hamiles are thin and flat, like hands of metal. The dexoration is in a style worthy of the shape. On one side is

represented a namph fleeing from a goal, on the other a man or god in purmit of a boy who has been playing with boop and stick. The principal lines of the figures and of the drapery express impelious movement: the finely crumpled folds of lines are contrasted with brouder folds of the woolles garment. The vigorous style

Kantharos Fifth Century B. C. of drawing is found on a number of vases signed by

Brygos, and this cup, though unsigned, was certainly decorated by the same master. (Compare p. 124.)

Killis outsal by Hierm

Fifth Century B. C.

The above picture is from the interior of a kylix. It illustrates an Afric legend: the story of Cephalus, the young Athenian hunter who was carried off by the goddess Eos, the Dawn. She has grasped his arm, and he turns his head with a gesture of surprise: her book is directed upwards, as if already planning her flight with him into the sky. The character of the drawing is not like that on most of the wases from the atcher of Hieron, and although signed by him, the wase was apparently decorated by an unusually skillful and original painter in his employ who did not register abstract beauty of line, but subordinated it to expression of motion and of individuality.

The drawing illustrated on this page is from an oil-jug which belongs to a later stage of the redfigured period. The subject is an Athenian myth, the contest Thesens with the Amazons will be noted that the figures do not all stand on the same level here: there is an indication of rough ground. The artists have solved certain problems of representation which long battled the older painters; the rendering of the eye in profile, for instance, There is less of ungularity in the composition than in the work of

Lekythan Fifth Century R. C.

earlier painters, yet energy is not sacrificed to grace, and the drawing is still firm and vigorous. This style of decuration was perhaps specially influenced by the frescors of Polygnotus and his contemporaries.

Drawing from a Lakythas

Pyris, Odymusi and Nancima

Fifth Century B. C.

This picture, from the cover of a small round box, illustrates a story in the Odysseus, awakaned by the cries of the Phacacian princess and her maidens, who are at play by the seashore, comes cantiously from the thicket where he has slept. Athena, his patron goddess, leads the way. Two of the maids are maining away in fright; one is busy with the washing of a garment and does not see. The princess herself stands creet, calmly waiting the approach of the stranger. The variety and truth of characterization are remarkable in so unpretentions a picture.

Exensygn Gran

Intaglio arala present a tradition of unbroken continuity from the primitive Cretan civilization to that of classical Greece and Rome, Impressions of seven gems of the earlier periods are reproduced above, aix of them illustrating the atomes must favored by the gen cutters: sard (2, 6), chalcedony (1, 3), agate (7), jusper (4). The lively but carelies representation of a cow suckling her calf on the Mycesusean seal (1) is in striking contrast to the precise rendering of the griffin attacking a stag (3), a work of the curly fifth century, still archaic in execution and subject. The gracing stag (2) is done in a more natural manner. An increasing fordiness for the human figure is illustrated by the representation of Danae (4), a work reflecting the spirit of Pheidian art, and by the graceful crouching figure of a girl playing knackle-bones (5) on a gold ring of about 400 B. C. The characteristics of Etruscan genapronounced modelling of the nuscles and ingenius adaptation of the subject to the field, will be recogpixed in the two examples above (0, 7).

Amazon in Battle

Markle, Fourth Century B. C.

An Amazon on horseback and a fallen apponent constituted the group of which the extant fragment is filmtrated on this page. Only the forearm of the latter figure is preserved. It was apparently raised to shield his body from the threatening spear of the woman-warrior. The hattle of Thesens with the Amazons was a theme which offered the dramatic contrasts and pathetic situations sought by sculptors in the later years of the fifth century and in the fourth century B. C. 'The vitality imparted to every detail of such a composition by the lest skill of the time is illustrated in this mutilated marble. The spring of the horse is clearly seen; the rendering of nuncles shows the excitement accompanying the motion. The edge of the rider's garment is driven back in wavy folds; the vigorous form and fine outlines of the thigh and knee appear above the heavy Thracian boot.

Status of a Boy Markle, Fourth Century B. C.

The statue has no attribute by which its exact aignificance and purpose can be determined. It is an ideal statue of a box, sixteen years old, perhaps; not an athlete, if one may judge from the softness of the body and the lack of emphasis on structure and muscular development. The easy grace of the attitude and the fine poise of the head recall the Athenian youths on the Parthenon frieze. Long exposure has given the Pentelic marble a warm time which heightens the effect of vitality in the modelling of the figure.

Aphrodite

Marble, Fourth Century B. C.

The grain and alight translucency of the marble are bere peculiarly adapted to the artist's nim. The fine aval shape of the face, the quality of the modelling, and the expressiveness of the features show that this head is the work of an Attie master, probably of the School of Praxiteles.

Statustis of Heraeles Markle, Grasco-Raman Copy.

The hero stands in the simple pose of the sthletic statues of the middle of the fifth century. His body is powerfully developed, and weariness is suggested by the droop of the head, but these elements are not exaggerated, as in later representations of Heracles. The original, probably of bronze and on the same scale, has been ascribed to the Attic scalptor, Myron. Its style has been reproduced with unusual fidelity by the Roman copyist.

Hand from Chies Marble, Finett Century R. C.

A veil originally covered the top and back of this head, which was made separately for insertion in a draped statue. The soft, subtle modelling and the impression-istic treatment of some details point to an artist closely related to Praxiteles, if not to that master himself. "The face is that of a modest girl, the soul of gentleness, radiant with quiet pleasure, diffusing unconsciously her happiness and youth around her."

Horais

Markle, Gracco-Roman

The slender neck and small head seem inconsistent with so massive a frame, yet this fragment has an enduring attractiveness, due, perhaps, to the attitude of melancholy revery, unconscious of all observers. Such a mood is appropriate to Hermes as conductor of souls to the world of the dead.

Head of Homer

Marthy Helloweter

Artists of the Hellenistic period (200-100 B. C.) not only partrayed contemporaries, but also sought to embody in marble or bronze their ideas of great men of the past. To this effort we owe the imaginary portraits of Homer, one of the best of which is in this Museum. It follows tradition in representing the poet as aged and blind. In spite of the unsparing realism which has shown the failing of physical vigor, the intellectual power of the head is unmistakable. The tone of color which the number has taken on is in harmony with the subject.

Siren Martie, Fourth Century B. C.

Sirens, imagined as half bird, half woman, were especially associated with death and so were often represented on grave monuments. The one figured above is a fragment of such a monument. She is mourning for the dead; grief is expressed in the attitude—one hand clutching the hair, the other laid on the breast—and in the face. The deeply-shadowed eyes and the contracted brow are specially characteristic of a period of art which sought to portray individual character and even transitory feeling.

Torso

Martle, about 300 B.C.

The skill with which the Greek sculptor employed transparent and clinging drapery to emphasize a noble form is illustrated by the fragment shown on this page. Its dignity and animation are characteristic of classical art in its worthiest representations of the gods.

Head of a Youth
Markle, Orners Rossan Copy

The practice of modelling in terra-cotta was adapted to the decoration of vases; some were even slapped in unitation of human or animal heads. The elaborate plastic ornament of the lekythos illustrated here almost obscures the fact that it is a vase. The new-born Aphrodite is springing from an opening sea shell; Erotes hover on either side, so that

the group seems to have an upward movement.

Scopas perhaps contribnted more than any other analysis of the fourth century B. C. to that developpoent of the expression of character and feelme which marks the art of the period. This head is a ropy of some unknown work of Scopus or of one of his pupits. Great intensity of expression is given by the upward gase of the abadowed eyes; the structure of the head suggests physical strength, the parted line and full throat a restless vitality.

Plastic Lelythos Fourth Century B. C

Amphora

Fourth Century B. C.

A fine example of the colossal cases made in Southern Italy in the fourth century B. C. The scene on the front shows Achilles, attended by Phoenix, sented on a couch. In the foreground among overturned vases lies the headless body of Thersites, and at a little distance the head. The use of plastic ornament and of added white color is characteristic of the later period of vase painting.

Mirror Cuse

Fourth Century B. C.

Circular mirror-cases were often decorated with reliefs of fine technique, made by hammering a thin plate of bronze into an intaglio mould. The finish of detail possible in such work is evident in the group of a Centaur and a nymph pictured above. The composition is balanced and lageniously planned to obscure the monstrous nature of the Centaur. The folds of the lion skin tied about the Centaur's shoulders and of the drapery of the nymph are rendered with a delicacy and grace of line appropriate to the spirit of the theme and to the decorative effect desired in a design on a mirror-case.

Tanagra Figurians, about 200 H. C.

In the classical period terra-cotta figurines were usually shaped in moulds of the same material. A number of such moulds, found in Asia Minor, in Italy, and in Egypt, are shown in the Terra-Cotta Room downstairs. Usually With a relaa figure was moulded in several parts. tirely small number of moulds a great variety of forms could thus be produced through different combinations of heads and arms and wings with bodies. It is surprising that these somewhat mechanical combinations do not result in more conspicuous faults of proportion and line. The more careful artificers added details by hand, giving an individuality of expression to the face which would be impossible in mechanical modelling After baking, the first, hair, eyes, and lips were appropriately colored; bright times of pink and blue were often applied to the dress.

This finish of detail characterizes the figurines which have been discovered on the site of the little city of Tanagra in Bocotia. Their date is from about the middle of the fourth century B. C. to the end of the third. Although found in cemeteries, there is no evidence of religious purpose in their manufacture. They probably have no other significance than the one most naturally attached to them:

Tampera Figurius, about 510 B. C.

they are groceful representations of ladies and youths and children as they wallord, tailed, and played. The types of Tanagra ladies are far the most common, but have great variety of attitude and motive. Their dress, usually consisting of a chiton reaching to the feet and an ample himstion, could be disposed in numberless pleasing ways. They suggest very vividly at least the outward charm of Greek life, as one might have seen it in the streets of Athens.

Tunngra Figurina, about 200 B. G.

Postenit of a Long Brown, about 50 B.C.

The composits of Alexander placed Macedonian rulers over the ancient kingdoms of the Orient, and introduced in Egypt and Syria an aristocracy of Macedonians and Greeks. The lady whose portrait is shown here undoubtedly belonged to this class; found in Egypt, it is possibly the portrait of Aroines II (born about 216 B. C.). It appears to be considerably idealised, yet the features are expressive of a distinct personality: the individual shape of the nose and the lips is motivable. The detailed treatment of the hair is very fine, and is in interesting contrast with the more impressionistic method denianded by the technique of marble. The eyes were of another material and were inserted.

Portrait Markle, Second Contary A.D.

This head is scalptured in gray Asiatic marble of very fine, close grain, and has a surface polish which is quite unusual in ancient sculpture. The mastery of material which has enabled the sculptor to reproduce the hard lines of the face and the texture of the skin permits us to suppose that it is a truthful portrait, and that if more were known of the subject his experience and character would prove to be reflected in this marble. Details of technique show that it is to be assigned to the second century A. D.

Roman Portrail Terra-cotts, First Century B. C.

The bend shown above is unique as a portrait in terracotta, probably made with the use of a life mask. The face is more natural and animated than most casts from life, and the pose of the head seems characteristic of the man. The artist has sketched the hair and has suggested the momentary glance of the keen eyes. Vividness of expression and literal rendering of detail make the head seem surprisingly modern. The subject is a Roman of the last century of the Republic.

Found in the valles of the Rhine, and for from Coblenz, this statuette is a relic of the extension of Roman imperial power over western Gormany. It reproduces a sculptural type of the fifth century B. C. A diatingulatied wholey has conjectured that it he is copy of the Athena Promuchos of Pheid: ins, the colossel statue of brome which stood on the Acrepolis of Athens, The arrangement of the dress recalls that of other statues of Alberta which are attributed to Pheidigs and his nesociates. The width of the acgis, enveloping the body like a cloak. is unusual in sculpture. The godden held ber

Athena Genero-Raman

spect in the left hand. The attitude of the figure has a constraint which is probably to be attributed to the copyrist.

Approdite

Fourth Century B. C.

The artists of the period to which this figure is attributed knew so well how to piease the eye through qualities of composition and general harmony of lines that even their less careful work is valued. This statuette is considered one of the most beautiful in the collection of the Museum, although its proportions are not faultless, and some details are neglected. Perhaps the most important element of its attractiveness is the simple and unaffected attitude, which has repose and yet suggests the possibility of graceful motion.

Hermon

Grave Roman

The many offices of Hermes are no flected in the variety of forms under which the god is represented in Greek art. The prehnic statuette ilhistosted on page 7# shows him as a god of the flocks The figure pictured here has unfortunately lost its special attributes, but the left hand originally earned the wand of his muthority as herald of Zeus; in the right may have been a purse, the symbol of his assocuation with trade. It will be noted that after the archain period he is always represented

as a youthful god. His function as patron of athleles may have led to this transformation of the type. There is a reminiscence of fifth century art in the proportions of the figure.

Cista Etruson, Third Century B.C.

Most of the cylindrical bronze boxes of the type illustrated above have been found at Palestrina (ancient Preneste); but the style of their organization marks them as objects of Etruscan art. The drawings with which the cylindrical surface and the cover are adorned are of the same technique and style as those on Etruscan mirrors. The chain handles are attached by rings which are fastened to the box without regard to the engraved design. On one side of this cista is shown a camp scene; on the other are Furies pursuing a young man; on the lid, Dionysus and his attendants. Three lions in high relief crouch on the feet which support the cista. Such boxes often held the small atensits of the lady's tollet—mirrors, perfumes, unquents, and rouge.

Aphrolite

Some works in terra-cotta were apparently scrupulous copies of popular statues. Such a copy of the famous "Diadumenos" of Polycleitus is known. The figure shown here apparently belongs to this class of direct copies, although the original has not been identified. The subject is Aphrodite, but the form and motive, as oftenin Hellenisticart. are human. In perfection of detail and harmony of proportions it is at once distinguished from the evantion figurines of jodustrial manufacture. The color of the clay is an indication that the statuette was made in Smyrna.

This figure of a recining Herueles, found in Southern Italy, is also probably an imitation of a work on a larger scale and in a more valuable uniterial. The hero has the excessive nunscular development which Hellanistic sculptors

attributed to him, yet even in this imitative work the head is characterized by marks of the intellectual power which controls and directs the p h y s i e a l strength.

Hemides

From Southern Hidy

Statuettes from Myrina, Second Century B. C.

The necropolis of Myrina, a city of Asia Minor, not far from Smyrna, has also yielded many terra-cotta figurines. They belong for the most part to a somewhat later date than do the Tanagra statuettes. Types of Eros and Aphrodite are very common among them. The figure at the right on this page, an Eros represented as drawing a sword, is a

spirited example of the Myrina terra-cottas.

The figure at the left, also from Myrina, was not made in a mould, but carefully fashioned by hand. The subject is again Erus, but he is here a child, as often in Hellenistic and Graeco-Roman art, and almost universally in modern pictures and sculpture. The whimsical fancy which has dressed this small god in the lion-skin of Herncles is equally characteristic of the Hellenistic age. The figure shows the sympathy with which the late Greek artists studied and represented the forms of children.

ENGRAVED GEMB

The later development of the art of gem engraving is illustrated by the examples shown above. The figure of a wounded warrier on an Italiote gem should be compared with the treatment of the same subject on an archair Etruscan scarab (see p. 94). Along with a distinct loss of freshness and vigor, the impression is given of a conscious striving for effect on the part of the artist. The same suggestion of a studied pose detracts from the beauty of the intuglio of Hermes with a lyre, a work of the Augustan Age. The seene on the second seal is Alexandrian in spirit; a Triton is swimming in the sea, supporting a Nereid on his back, while a Capid and a dolphin sport in the waves before them. The excellence of the Romans in the field of portraiture is illustrated by the two intaglio heads in the lower row and the enmes of green turquoise with the busts of Livia and the young Tiberius.

Carmon

General Roman

Cameos, representations in relief cut in precious stones, were highly prized by the Romans of the Imperial period. For the work illustrated here, one of the most renowned exnuples of cameo engraving, the artist chose a surlonyx with a layer of voje an-last tings above another of black, adapting the contrast of tones to a scene lit by a torch.

Erotes, or Cupida, were often shown playing as grown-up people. Here they are engaged at a wedding. A sturdy torch-bearer lends Eros and Psyche by a fillet. Eros clasps a dove in his hamis. Psyche, clad in a long robe, with butterfly wings, walks class by his side; both are veiled. To the left an Eros holds a basket of fruit over their heads; to the right unother stands near the cooch.

The group is so naturally composed and so animated that one almost forgets the subtlety of the technique which has given the idea complete and delicate expression under the difficult conditions presented by the material and the size of the gent. The cameo is signed by the artist, Tryphon. In the last century it was in the collection of the Duke of Mariborough, to which it came from the Arundel collection.

Murble Portrait Hands Augustus, 27 H.C.-15 .1.D.

Second Contury A.D.

Divine homes were accorded to the emperor Augustus in the provinces of the Roman empire even in his lifetime, and the demand for portraits of him must have been incessant. The head here reproduced shows him as a man of mature years. In its marked but not exaggerated realism it is in interesting contrast to another head of Augustus exhibited nearby. The latter is an idealization rather than a portrait.

The subject of the second portrait illustrated above is not known; apparently it is a Roman lady of the tune of the Antonines, for she wears her hair in the fashion of Fanstma, the wife of Antoninus Pins. breathing likeness of an intelligent, somewhat masterful, and above all, aristocratic woman. Her eyes are small and near together, the nose is eather aquiline, the mouth expressive, the jaw firm. The fine head is

admirably policel."

Cast from an Arretine Mould

Vintage Seeme

Arretium in Etruria was the centre of the manufacture of real glazed pottery with decoration in relief, whose motives were probably copied from the work of Hellemstic allversmiths. Casts from terra-cotta moulds made for the production of this pottery are shown on this page.

## PAINTED VASES

Few objects of antiquity are more fragile than vessels of clay; none are harder to destroy altogether. Marhles suffer by weathering, and still more by violence; bronzes fall into dust by corrosion; but terra-cotta vases, though often broken in many fragments, are not subject to decay, and are of too common material to be appropriated to new uses.

A collection of Greek vases not only illustrates the traditions and principles of a minor art, but reflects the subjects and in a measure the style of mural paintings which are entirely lost. They are probably also to be associated closely with contemporary work in other lesser arts, such as bronze repousse relief and the inlaying of wood with ivory. Their value to the student of classical literature, religion, and private untiquities is apparent to one who considers the endless variety of mythological and genre pictures which ornament the ware of the classical age.

Painted pottery was produced in Greece from an early date in the prehistoric period, and did not fall into disuse until the third century B. C. The earliest pottery was moulded by hand. Examples in the case of Cypriote ware (Case 1) show its rude shapes and its primitive linear decoration, produced by scratching the surface with a pointed tool. The invention of the even and of the potter's wheel made uniform color and symmetrical shape possible; the substitution of painted ornument for incised patterns led to far greater freedom and accuracy of design. The series of vases from Crete (Case 2) illustrate the development of the art during the second millennium B. C.; the finely-washed clay, the graceful shapes and delicate walls, and the spirited designs of the better specimens indicate the high standard that was attained. The finest vases of the later part of this period were decorated with designs naire or

less freely adapted from plant and animal life, particularly the life of the sea; lilies, sea plants, and shellfish are common subjects. The Museum possesses a few late Mycenaesin vases on which such ornaments are

painted in dark, Justrous colors.

A fairly sharp line separates the ware just described from the earliest pottery of the classical period. Heavier shapes prevail; the ornament is mainly geometrical, not derived directly from nature, though crudely-drawn animals and men are not unusual; many of the cases were made to serve as tomb monuments. Of this geometrical ware one case is shown (Case 3).

In the eighth and seventh centuries both the shapes and the ornamentation of pottery are based on Oriental models. On the ware of Naukratis, Rhodes, and Corinth (Cases 4-5), the lotas land, the rosette, and apiral designs are seen, together with rows of animals both real and fantastic. The technical skill of the patter again rises nearly to the level of the best Cretan ware, and a lustrous black glaze is occasionally secured.

In the sixth century Athens became the centre of the potter's art. The pure black glaze was combined with the rich red of the pottery to produce splendid results; the shapes were refined, the conventional decorative ornament was confined to definite limits, and the interest of the vases was much increased by the ose of scenes of human interest, mainly mythological in character. In these scenes, some of which were signed by the painters, the figures were drawn in black gizze; purple and white were often added to bring out parts of the figure, and details were incised with a sharp instrument. Of these black-figured vases a few fine specimens are placed upstairs, but the main series is in Cases 6-7, 13-15.

About 500 B. C. the reversal of the colors — that is, the use of black glaze for the background and the red of the clay for the figures — permitted the use of fine black lines instead of incised lines for the details of the figures. In the first half of the fifth century skillful painters devoted their attention to work on vases, particularly on kylikes, many of which were signed by the artists. The four most famous of these - Euphronius, Dourts, Hieron, Brygos - as well as many others are represented by characteristic examples of their work (Cases 16-24, and Fifth Century Room, Cases 2, 5, 5).

In Cases 11-12 the black vases with moulded ornsmonit (bucchero ware) were pottery imitations of metal ware ornamented in relief. Most of these vases were made in Etraria, but a few small pieces from Greece

are exhibited.

The white vines with designs drawn in outline in Cases 10 and 22 (lakythat) were perfume vases, used for the most part in connection with the burial of the dead. The freedom of the drawing and the occasional use of color lend them a special interest.

The later development of vase painting in Southern Italy is illustrated in Cases 26-28. Here the effort was for pictoresque results, and the drawing was careless and sometimes crude. Occasionally the scenes represented and the rick effects are attractive in spite

of the poor workmanship.

## Cons

The highest achievements ever produced in die engraving were the coins made by the Greeks in the sixth, fifth, and fourth centuries B. C. The types on these coins were the badges of the towns or authorities which issued them, attesting the weight and purity of the metal as a personal seal certifies the authenticity of a document. Their artistic value is that they reflect the meessant activity of the Greek imagination, which controlled even the design of an instrument of commerce. The point of view was detached and objective; symbolism and allegory of deep import were excluded. The range of subjects was antrow, partly because of the nature of coins, but also because Greek public art of this period limited itself to simple themes related to worship or heroic myth and athletic contests, repeating old subjects rather than inventing new. It may be remarked that even in the decoration of these small objects, which would have been well adapted to pure design in low relief, the Greek did not escape from his dominant interest in the representation of life. He preferred still to engrave forms of men and gods and beasts on his coins, though they had to be executed in high relief, which to modern eves appears unpractical and undesirable in coins.

Granted this limitation in choice of motives, the decreative skill of the engraver is abundantly illustrated — preeminently, perhaps, on such a coin as that of Name (24), where the artist represented a satyr with his wine-cup, seated on the ground, and ingeniously composed within a circle which is completed by means of the uscription. There is no loss of apontaneity in these difficult adaptions of sub-

<sup>1, 2, 3,</sup> Athens.

COINS 127

ject to space; only in later designs, possibly in the delicate head of Demeter (14), made in 346 B. C., is there conscious effort in the modelling. The coins exhibit an unsurpassed skill in draughtsmanship and representation in relief. The creations of the earliest art are readily distinguished by their linear quality from those of later date, where the artist is more occupied with surfaces than with sharp edges. A comparison of the head of Athems of the sixth century (1) with the same subject issued fifty years later (3), or the cattle of Ichnae (4) with the bull of Thurium (7), or of the Heracles of Thebes (13) with the Heracs of Cyzicus (18), illustrates this fact. We are attracted by the drawing in the archaic coins; by the modelling in those of developed style.

In a long series of objects of restricted size the observer becomes conscious of the limitations imposed by their minuteness, but the Greek breadth of conception and power to suggest the great by the little bursts through these bounds. The happy strength of the Greek artist to omit the accidental without becoming tedious, and record the essential while preserving the human and vital, finds luminous illustration in this field. The sense of scale does not forbid us to see a statue in the archaic Apollo(?) of Caulmina (6), or in the Nymph at Himera (6), or the seated Victory of Terina (9). The Herseles of Croton (22) might adorn a pediment of the Parthemm, and the Hermen of Pheneus (20) be influenced by a work of Praxiteles. The unrivalled head of Hera on the coin of Pandosia (28) reproduces, probably, the head of a statue.

Treatment of the same subject varies to a considerable extent. The Apollo at Chalcidice (\$1) resembles that at Rhegium (79); but these differ from his feminine appear-

COINS 120

ance at Amphipolis (17) and the virile sentiment in his head as um god at Rhodes (19). Again, the literal representation of the eagle (5) is a conception distinct in aim from the picturesque rendering at Agrigentum (10, 11), and from the more plastic presentation of the hird in its struggle with a serpent (81). Another instance of variation of subject is afforded in the Theban and Cyzicene kneeling figures (13 and 15), where the slight difference of treatment of a pose already familiar to us in the Accina pediments, serves to distinguish Heracles from Hermes.

Direct portraiture comes late in the period. Features of individuals may appear in the guise of a divinity in the magnificent head on the coin of Archelaus (12), at the end of the fifth century, or in the somewhat earlier representation of Heracles at Camarina (30); the features of Alexander the Great may be suggested on his coins (15), but they are not certainly shown until his successor, Lysimachus (323 B. C.), placed them on his issues (16), though still with the attributes of a god. This is one of the earliest certain instances of the portrait of an individual head.

Ancient come were not chased or cast, but struck by hand. The difficulty of the process, when modern mechanical appliances were unknown, accounts in part for the irregularity of their shape; but it may be also supposed that this irregularity was long perpetuated in reminiscence of the rough forms of ingots which passed as currency before coins were stamped. Such a conjecture is made plausible by the conspicuous lack of symmetry in the electrum coins of Asia Minor, which were made nearest to the place of the invention of comage.

It must be remembered that cains were produced, not primarily as objects of art, but by the thousand as instru-

COINS 131

ments of trade; we may readily forgive, therefore, superficial imperfections. No objects of Greek art better illustrate the diffusion of Greek genius than the coins, which were issued not only by the great cities, but by many small towns throughout the Greek world, from the coasts of Asia and Thrace to Italy. We cannot judge of the motives which inspired their makers at a time when imagination was far more free than to-day, and the power of expression remiter; but it is hard to consider the stream of superb coins which poured from the mints of Sicily and Italy during the second half of the fifth century (for instance, 7-11 and 22-30) without the conviction that civic pride induced general rivalry and atimulated artists to supreme effort. The climar was reached in the work of the arrists Cimon and Evacentus. Cimon's facing head of the goddess Arethusa, with dolphins gambolling among her streaming treases (23), and the harley-crowned head of Persephone by Evacuetus (25) were accepted as standards in antiquity. and the Persephone has influenced many medern coms.

## WESTERN ART TO THE END OF THE RENAISSANCE, 1000

BY the second century A. D. there were Christians in nearly all parts of the Roman Empire. As far as the new religion found expression in art, it made use of simple symbols and symbolic pictures executed in the Roman manner. This use of symbols was in accord

with the intellectual territorey of the time,

The first monumental Christian art was produced after the recognition of Christianity by the state in 327, under the Emperor Constantine. The old basilicas of St. Peter and St. Paul and others were then built outside the walls of Rome over the burial places of the early saints and martyrs. The materials were often taken from Roman temples, but new works of Christian art, glass messies in glowing color, decorated the interior walls. On these messies and on the contemporary saccophage and miniatures appeared direct representation of Old and New Testament scenes in addition to the symbols of the early Christians. The literary imagery of the Jewish writers was translated into pictorial and plastic forms by a people who had long been familiar with such expression.

Christian churches rose in many parts of the Empire; in Rome, in Syria, and in Constantinople, the new capital founded by Constantine in \$30 on the site of the Greek colony of Byzantium. At Constantinople the later art of Rome was again brought into contact with Greek tradition, and, influenced by Syria and Persia, it coloninated in the magnificently decorated church of Hagia Sophia built in the sixth century. This church is now a Turkish mosque.

During the centuries that followed, while the nations of Western Europe were still in the making, there existed brilliant civilizations in the Levant and at Constantinople. The most important period of Byzantine art extends from the middle of the ninth century to the unddle of the eleventh. Many ivory curvings, objects in gold and silver, bronzes and textiles, in the beautiful workmanning of this time, reached Western Europe through Southern Italy and Venice. The Byzantine influence in the art of the Russian people dates from their conversion to Christianity, about the year 1000.

Einder the inspiration of the new religion of Islam, the Arabs, in the seventh century, conquered Syria and Egypt and Northern Africa and Southern Spain. The cities of Bagelad, Damascus, and Cairo became centres of a new civilization, vividly portrayed in the "Arabian Nights." The religion of the Arabs forbade them to represent the human form; their efforts centred in design and color. The achievements of later Islamic art include the Albambra at Granada (about 1300), the mosques of Constantinople (after 1458), the buildings, ceramics (see pp. 215-218), and textiles (see pp. 230-256) of Persin and Asla Minor, and some of the linest architectural magnaments of Central Asia and India.

Western Europe in the early Middle Ages found artistic expression in the churches of the Romanesque type. Their somewhat heavy exteriors and round-arched windows, areales, and vaults unite Byzantine, Roman, and Northern elements. They are found on both sides of the Alps with many local variations and often with a profusion of sculptured ornament. The best belong to the eleventh century.

The problem of the stone vanit, only partially saived during the Romanesque period, made great progress in the twelfth century with the general application of the pointed arch. The Gothic exthedrals which then arose were, like the Romanesque, shrives of the Christian religion and the expression of the ideals of a great religious age, but they grew up among peoples in Northern Europe whose tempera-

ment and art were also the product of the realities about them. The result is an art in which the Roman element for the time being a almost entirely eliminated.

The great height and slenderness of the apports of the Gothic cathedral were made possible by outside buttresses. while the concentration of the weight of the building on separate piers and columns permitted hage open spaces in the walls. These were filled with glass, jewei-like in its radiant color, framed in beautiful stone tracery. Skilled carvers in wood and stone decorated pinnacles, espitals, chairs, and doorways with ornament derived from local plants and from the structural forms of the building itself, and with little mechanical repetition. Grotesque monsters formed the gargoyles or waterspouts, and the draped human figure curved in stone served both for ornament and for instruction. In France almost the whole body of science, nature, history, and religion, according to the mediaeval divisions, was represented in stone pictures upon the enthesiral.

In the thirteenth and fourteenth centuries Gothic art was perfected and spread over Western Furope. In the Franciscan and Dominican churches and the civic cathedrals of Italy it often became an ornamental addition to the different

local Romanesque styles.

During the thirteenth century the cities along the European routes of trade rapidly increased in importance, especially the fortunately located cities of Italy. In Tuscany, Pisa developed earliest. Already in the eleventh and twelfth centuries its white marble cathedral had become a model for its neighbors. In 1980 Niccolo Pisana curved his pulpit reliefs, drawing some of his motives from antique remains. The works of his successors show strong Gothic influence (see p. 246). The city of Siena next rose to importance. Its school of painting, although founded on Byzantine works, early showed a growing freedom from tradition and it possessed a decorative charm wholly its own (see the altar-piece by Bartolo di Fredi in the Picture Galleries).

Florence, which gained real importance for the first time in the thirteenth century, began, shortly before 1300, the group of Gothic buildings which are the present landmarks of the city. Contemporary with Dante, Giotto di Bondone, the first of the long line of master painters of Italy, produced his dramatic story-telling cycles of frescoes at Assisi, Padna, and Florence, including those portraying the life of St. Francis. After Giotto's time mural freeco pointing

occapied a leading place in the art of Daly.

In the early fifteenth century a German school of painting developed in Cologne (see p. 150), and the first master-pieces of Flemish painting, the work of Hubert and Jan Van Eyek, appeared (after 1482). The Flemish painters began the successful use of oil as a medium, and their influence on contemporary Italian painting, though not yet clearly defined, must have been important. Besides this development of painting (see p. 142), the fifteenth century and the next witnessed beautiful developments of late Gothic architecture in Flanders. About the year 1500 tapestry weaving reached its beight (see pp. 237—241).

The vigor of Italian life and intellect produced at this time a great burst of creative art. The direction of its expression was determined to a great extent by the newly awakened interest in the literature of Greece and Romennuch of which had been unknown to the Middle Ages. New ideas from these sources now profountly influenced

conduct and society.

The pioneer of the classical movement was Petrarch, (d. 1374). His teaching as to the mutual relations of the patron, the artist, and the man of letters, and his appeal to Italian pride in ancient Rome, helped develop every art. Florence was the centre of the movement. Its citizens made collections of ancient genus, coins, and manuscripts, founded libraries, and attracted scholars. The first effect of the classical texts was less scholarship than inspiration and a gradual growth of the humanist point of view.

Under the patronage of the Medici, in the early fifteenth century, there arese at Florence a group of artists who had broken with the traditions of the followers of Giotto, and whose work, free, spontaneous, and human, was in accord with the new ideals. Their realism, their idealism, their religious feeling, their increasing paganism, reflected the opposing forces of the times. With decorative details of great delicacy and refinement, not as yet mere imitation of Roman work, their art possessed the qualities of sobriety and restraint and showed a sympathetic treatment of childhood and an increasing interest in humanity. The Church welcomed this art and made use of it. In the sculpture of Donatello and his contemporaries, and the paintings of Masaccio, Fra Angelus (see p. 148), Fra Filippo Lipps, Botteelli and others at Florence, in the art of the hill towns from the valley of the Arna to the upper reaches of the Ther in Umbria, and in that of the valley of the Po, Italy interpreted and visualized the Christian religion in a manner never to be forgotten.

At Venice the earlier painters were followed by Giovanni Bellini, who painted many Madonnas grave and screne, still showing traces of the old hieratic Byzantine art, but rendered in the superb color which was the distinctive beauty of the Venetian school. (See the altar-piece of Bartolon-meo Vivarini: the Pieta of Crivelli, p. 143; and the engravings of Mantegus in the print collection.) In the making of beautifully printed isooks Venice led the rest of Italy. Sincerity of purpose characterized the art of the lifteenth century. Its expression was far more genuine than much of the technically perfected art of the next generation.

With Leonardo da Vinci's Last Supper, completed at Milan in 1408, the golden age of painting began in Italy. The Popes became the most magnificent of patrons. Among the artists at Rome, Raphael best embodied the Renaissance spirit. In the Stauza della Seguatura in the Vatican he painted, in the humanist manner, frescess representing religion, poetry, philosophy, and the cardinal virsenting religion, poetry, philosophy, and the cardinal virsenting religion.

tues (standing for character), a synthesis which the mind of the Renaissance continually struggled to grasp. (See the engravings of Marcantonio Raimondi after Raphael in the print collection.) The splendid frescores of Old Testament subjects by Michelangelo in the Sistine Chapel belong to this period. At Venice Glorgione and Titians, with many others little inferior to themselves, reached a higher technical stage in painting, and interpreted their subjects in a manner more secular and magnificent than religious.

After 1300 direct imitation of Roman and late Greek art became more pronounced. The new St. Peter's was begun in 1500. The Apollo Belvedere, discovered in 1491, and the Laocoon, discovered in 1506, became models for sculpture. Raphael drew up plans for the restoration of ancient Roma. Original Greek works laid small influence as compared with Roman works; even the temples at

Paestum, near Naples, were ignored.

Meanwhile there was a vigorous artistic renaissance in the German cities along the routes of trade. The Gothic carvers and metal workers of the important commercial city of Nuremberg were famous. Its painter, Wolgemuth (see p. 153), was the teacher of Albrecht Dürer, who, like Leonardo da Vinci, was a thinker and a writer. (Dürer's engravings and wesdeuts may be studied in the print collection.) Contemporary with Dürer were the two Hol-

beins, painters of Angsburg and Busle.

The first half of the sexteenth century was the most dramatic period in Italian history. It saw, along with the culmination of Italian art, the loss of Italian liberty. The mutually jenious small city-states of Italy failed to unite against the outside enemy (Spain, France, and the Germans), and the greater part of the peninsula passed under foreign control. Milan lost its independence in 1409, Rome was sucked in 1527, the republic of Florence came to an end in 1531. Venice, although humiliated, remained safe on her islands, and in her territories painting continued to flourish all through the century (see pp. 148 and 149), as

did literature for a shorter period at the neighboring court of Ferrara.

During this century face-making was developed in Italy (see pp. 255 to 260), and majolica ware was produced in many of the towns on the eastern slopes of the Apennines (see p. 250). The done of the new St.

Peter's at Rome was finished about 1000.

Conquered Italy became in matters of art the teacher of Northern Europe, where the great Gothic movement had spent itself. In France Italian influence early appeared in the royal paluees or chateaux of the valley of the Loire, with their happy mingling of native Gothic forms and Renaissance ornament. The spirit of the Renaissance was, however, too often mianuferstood in the North, where the later works were usually imitated rather than those of the earlier and more inspired period.

Marriage of Saint Catherine Steam School, Functionth Contury

Allied to the work of Lippo Memmi, though not in technique strictly typical of him. The central small group shows two young knights throwing down their arms to embrace. Above, the inscription. "Arico di Neri Arighetti had this panel made" (fece fare questa tavola), suggests a votive picture grown out of fear and hatred like a flower from the nure. The Arighetti are mentioned in Sienese fourteenth and fifteenth century records.

Madaman and Child with Angels, Saints and a Dann't Fra Giovanni da Fande, vallad Reals Angelies, 1887-1 pts

This little panel, in tempers, which measures in height and width only eleven and a half inches, is a typical example of Fra Angelico, suggesting both his ecstatic devotion to the mysteries of religion and also his interest in the contemporary movement toward scientific investigation. The Virgin and Child and the adoring angels are painted with that mystic sweetness and holy Joy which have produced the sentimental affection so generally felt for Fra Angelico, and the human figures with a marked interest in reality.

Gift of Mrs. W. Scott Fitz.

Carlo Crivelli, after having learned his art in Venice, left that city never to return, and his pictures were painted in a group of small towns, east of the Apennines, near the Adiatic coast, between Ancora on the north and Ascali on the south, a disputed town on the border of the Papai states and the kingdom of Naples. This was a region little affected by the Renaissance, and here he was able to work unlisturbed by outside influences and without serious rivals. Hence his art retains many characteristics of the early Venetians before Bellini, although enriched by his own-development.

The printing on the opposite page is probably a detached panel from a large alter-piece; it is in tempera on wood and is inscribed Opus Caroli Criselli 1485. The strongly individualized heads, almost harsh in appearance, occurring side by side with a beautiful face, and the angular hands are characteristic, but the quiet seriousness of expression usual with Crivelli, is here and in other representations of the Pieta replaced by an attempt

at violent emotion not wholly successful.

The architectural details and the festoons of fruit show the influence of the school of Padna. Crivelli, unlike Squarcione and Mantegna, has not copied literally the marble festoons from Roman sarcophagi and altars (first popularised by Donatello), but has rendered the fruit in a most natural manner, in striking contrast to the archaic figures

The decorative features of the painting, the elaborate textile patterns, the wide spaces of enumel-like color, the use of gold, and the absence of strong contrasts of light and shade, recall the best features of the old Venetian school and illustrate one of the most attractive sides of Crivelli's art.

Rushforth, Carlo Crivelli, pp. 68, 67 and 163, London, 1900.

Pieth, painted 1486 Carlo Cricelli, Fifteenth Century

Portrait called Gioranni Renticoptio, 1543-1310 Andrea da Solurio, 1543-1520

Solario was the most able as well as the most independent of the Milanese painters who were influenced by Leonardo da Vinci. His method was considerably affected by the painters of Venice, where he lived for a few years. In this portrait, which is so carefully painted that it has an enamel-like quality, he has represented a resolute, aggressive personality, a man of physical as well as mental vigor.

Madanno and Child Attributed to Bartalanemso Snarels, called Bransantina About 1300 to about 1500

Bramantino, whose appellation is due to his intimacy with Bramante, belonged to the group of artists who founded the Milanese School; his works are very rare, but he exercised no little influence on his contemporaries. The balance of the composition and the harmony and delicacy of the color contribute to the charm of the picture. The tree partly cut down symbolizes, perhaps, the Old Dispensation, the young branch symbolizing the New.

Court Allorghetti of Response and His Son Torranni Battishn Moroni, 1529 (?)-1578

Many painters, influenced by Venice but retaining their own local characteristics, flourished in Venetian territories. Moroni's truthful portraits were painted at Bergamo. In that above, the father has just finished a letter and handed it to his son to deliver.

Part del

Patrice Corporeir, 156st - La C.

This portrait by Carpaccio is distinguished for the soundness and force of its structural draughtsmanship, and the strength of its color. There is a feeling of uncompromising definition in the forms, with the objectivity that is present in most portraits by the old jectivity that is present in most portraits by the old masters. There is no idealization of the senator's human qualities, which are keenly observed, and honestly represented.

Virgin with saints and the relatives of the givers - was minted in 1511 for the Chapel of St. Gertrale in the Chapen Eller, near Dimeddorf.

Portrait of a Lody Lancas Crassach the Elder, 1473-1563

This thoughtful portrait, representing Cranach in his graver mosal, is dated 1549, the year before his magnificent portrait of humself which is now in the Uffice, and four years before his death, at the age of eightyone. In his later style the coloring is sober, but the forms are more graceful and his drawing is marvellously sure. Though be has not the insight of Dürer or Holbein the younger, his portraits are succee and individual, and achieved the greatest popularity.

The Death of the Virgin, by Michael Wolgenmth, is an exceptional example of a master little known, especially in America, though he is worthy of honor, both for his own vigorous and individual, if somewhat provincial style, and for the influence he exerted upon his more celebrated pupil, Albrecht Dürer.

The legend of the Death of the Virgin relates that the Apostles were witnesses of the ovent, having been miraculously gathered from all parts of the world. They are represented in the eleven figures with balos, the twelfth being perhaps Matthias, the successor of Judas, shown without a hate because the choice of the Apostles themselves and not of their Lender. St. John holds a pain leaf before the Virgin, another lifts his hand in benediction, a third escrive the expergillum with holy water, a fourth bears the cross, and a fifth blows to rekindle his censer. Strong coloring undimmed by age, careful and claborate representation of stuff and drapery, emphatically modelled faces—portrait-like and individual—all are united in this meture.

The inscription in the panel at the base reads: "In the year of our Lord 1470, on the Friday before St. Walpurga's Day, departed this life the honorable Mistress Hedwig Volkamer, to whom may God be gravious and compassionate." Hedwig Tucher married Hartwig Volkamer the rounger, who died in 1467, she surviving until 1470. The coat-of-arms on the left is the escutchem of the Volkamer, and that on the right of the Tucher family. In the two kneeling figures of groom and bride, youthful and quaint in dress and bearing, this memorial altar-piece perpetuates the

memory of the husband and wife.

The Death of the Virgin, painted about 1480 Michael Wolgmath, 1434-1619

This remarkable portrait of Fray Felix Palavicino is one of the finest works of El Greco. In the ruffled bair, the ashen checks, the brilliant eyes and refined lands of Fray Felix, who is dressed in the robes of the Trinitarian order, the painter has here most forcibly presented the personality of the acute, herrous, fiery ecclesiastic. What Fray Felix himself thought of the portrait he expressed in a sounct addressed to the artist, a translation of which follows:

O Greek divine! We number not that in thy works
The imagery surpasses actual being.
But rather that, while thou art spared, the life that's due
Unto my brush should e'er withdraw to beaven.
The sun discount reflect his may in his own sphere.
As trightly as the converse. Thou dest
Essay, and like a god surraced. Let nation try:
Reboot her ranquishest and outdone by thee!
Thou rival of Promethees in thy pertraitmy.
May'st thou essays his pain, yet srise his fire:
This does my soul for they must arrive this fire:
This does my soul for they must arrive thy desire:
And after must and twenty years of life,
Betweet thy hand and that of God she stands perplexed.
And doubts which is her body, where to dwell.

Dominico Theotosopuli, called El Greco, El Griego, or Dominico Greco, was born in the island of Crete and trained in Venice. He want to Tuledo in 1875, where he died in 1814. His original but somewhat eccentric genius did not find favor with King Philip II, who was then carrying forward the decoration of the Escarial pulsee. Many of El Greco's portraits are admirable, and it is possible that Velazquez was influenced by them. El Greco was also a sculptor and an architect.

Palomino, El Museo Pictorico, Madrid, 1797; t. II, p. 428.

Portrail of Frny Files Hartenia Falancians, printed 1609 El Greco (Dominica Theotocopuli), 1545/F)-1614

Real from Partnell by Vilangues

Velazquez bas here painted a more vonthful face ther appears in any of the other portraits of the royal family. in that of a boy, not wholly at suse in his position, and rather resentful of his self-conscious ness. The figure is standing beside a table covered with dall crimson velvet, upon which resta his but. His dress is black, refleved only by a golden chain mul the Order of the

Golden Pleece and the linen at his wrats and neck. His left hand cests at the hilt of his sword; in his right be holds a paper. The absence of self-display in the dress and the soleristy of the surroundings accord with the fushion of

the Spanish Court at the moment.

This picture probably dates from 1623, in which year Velazquez became court painter. In it are seen all the qualities of his earlier work: the outlines of the figure are sharply drawn, the modelling is hard and lacks atmosphere, the painter works very near his subject with sharp perspective, the light is from the left, the background almost empty, the hands well shaped and conspicuous, and a closely-woven convax is used with reddish brown underpainting. In a full strong light one sees the beautiful drawing of this figure, the determinate lines of the body, and the details of the dark clothes.

Early Pertmit of Philip IV Diego Volumez 1500-1600

Des Babiner Carlos

The picture on the opposite page represents the son of Philip with the dwarf, the attendant provided for royalties necording to the taste of the time. pair are at play prince is chad in a quaint mixture of infant dress and toy armor. He wears a steel gurget and has one hand placed on his mininlare sword: a erosses his chest, a baton in his discussful liand is used as a support; his dark green frock is em-

broidered with gold, with lare at the neck and wrists. A plumed hat lies on a cushion opposite him. The dwarf stands on a lower step of the dais holding a silver rance-like hanble and an apple. The prince's face is very beautiful and winsome with his blue eyes, bright, clear complexion and scant flaxen limit. The picture has a golden red under-

tone which shows through everywhere.

Don Baltauar Carlos, eldest son of Philip IV, was born in 1629. This portrait, in which he is only about two years old, is the earliest of a most interesting series painted at different times during his boyhood, showing him in hunting dress, on horseback, and in ordinary dress. The prince died in 1646, when only seventeen years old. The Infanta Mazgarita, born 165), daughter of Philip IV and his second wife, appears in another charming series of portraits by Velazquez, including the famous Las Meniñas (the Maids of Honor), painted when she was between three and seven years old. In 1659, the year before his death, Velazquez painted the little prince, Philip Prosper, then only two years old, who died two years later.

Don Balterar Carlos and his Presel, painted 1691 Diego Velesques, 1620-1660

Coronation of the Viegin Spanish School, and of the Extensia Contary

An effort after richness in the decoration of fabries, accessories, and the use of gold is characteristic of Spanish painting up to the end of the sixteenth century. Flemish and Itslian militeness frequently mingle in it. Often a number of figures are grouped within a marrow space.

Postrait Francisco Goya y Laciontes, 1736-1825

A young man of slight build and delicate features, dressed in the costume of his time, stands may a table on which are writing materials. He is behaved to be the artist's son. This portrait was probably painted before the larger one illustrated on the following page.

Partrail of a Man Francisco Goya y Lucientes, 17:16-1328

Goya, to whose work French artists of the more century are indebted, became painter to King Charles IV in 1789. His cicinings depict contemporary Spain, to the scenes from the Bull Ring, in the bitterly satirical Capricks (to be seen in the Museum collection of prints), in the Miseries of War, and in other series.

This portrait is an example of Goya's most virile and

at the same time most finished work.

Perevola of My Carlo theoled and His Burnilly

## DUTCH PAINTING

The Dutch people, Protestant in their religion, rich through their ocean commerce and their possessions in the East Indies, self-reliant, and independent after the successful termination of their eighty years' struggle against Spanish control, became definitely separated in the seventeenth century from the people of the Southern Netherlands. Those provinces still belonged to Spain and remained Catholic, and there Robens continued to paint Italian traditional subjects, although he interpreted them in a thor-

oughle Flemish manner.

The great Dutch' painters took little interest in Italian religious pictures, or in mythological or historical subjects, and in spite of the activity of the Dutch printing presest they had no literature of their own to put into painting. In a time of wars abroad and confusion of struggling parties at home, they preferred to ignore the hero, the tighting man, and the stirring episode. Instead they painted portraits of individuals, civic and corporation groups, quiet interiors and homely sexues, broad sweeps of sky over a landscape with cattle, and the commonest of everyday incidents. Many of their wonderful paintings of game, fruit, and

flowers were simply signs for dealers.

These painters brought an unfettered mind and eye to see their subject, and their art clothes it in color and in wonderful light and shadow. The careful workmanship and the soundness of their technical methods raises their pictures above the unimaginative liberal rendering of the life of a provincial people, and makes of them works of universal interest; a portrait by Rembrandt is a master's study of the human face seen in varying conditions of light and shadow, or a picture by Pieter de Hooch (see p. 168) is above all clies a marrellous rendering of sunlight coming into a darkened interior. Even when the picture is a coarse tavern scene or a prosaic meat shop, the true sense of color and the finished workmanship so delight the eye that subject and composition are forgotten.

<sup>\*</sup> Cf. Eugene Fromentin, The Old Masters of Belgium and Helland, trans. Robbins. Boston, 1882.

Portrait of a Ludy

From Halt. 1581(7)-1600

The quiet, self-reliant, smiling lady whose portrait appears in this picture, is seated in a favorite attitude of the artist, a book in one hand, the other grasping the arm of her chair. The picture is signed 1648; in it the characteristics of Hals' later manner may be studied. The greater part of Franz Hals' life was spent in Haarlem, where the finest series of his works is still to be seen in the Town Hall.

Birer Scene

Jan Van Goyen, 1896-1656

Jan Van Goven was one of the few greater Dutch artists whose birthdate falls before that of Rembraudt. Of the Datch landscape, brought to its perfection later by Ruysdael and Hobberna, Van Goven is called the creator. His life was passed within a few leagues of The Hagne, where he became a substantial citizen. Portraits of Van Goven exist by Franz Hals, Van Dyck, and Van der Helst -un engraving of the latter bearing the Inscription "genuinus Pictor Regionum" ("born minter of the region "). The present manel is signed and dated 1655, the year before Yan Goven's death, and the delicate veil of warm tone bathing the landscape marks his latest manner. The intimate and quiet charm of his work has given Van Goven an embering fame. His pictures are at once important historically and enjoyable for their own sake.

Portrait of the Wife of Dr. Nicholas Tulp Rembrandt Van Ryn, 1907-1669

Dutch Intreior

Pieter de Houch 1038(F)-1681(f)

In a room, darkened by a drawn curtain and lighted by an open door, are two women. One of them, stooping, is lighting the fire; the flame makes a bright spot in the gloom. The other woman holds a basket as if about to set out for market with the dog. Her red shoe is another bright spot of color. The next room, where the lower step and call of a stairway can be seen, is filled with light from many windows. A bright ray of similght comes in through the open door striking along the edge of the casing, in contrast with the reflection, on the partition between the window and the doorway, from a red curtain at the outer window. Outside is a canal; on the opposite side a row of trees with figures of passersby, beyond them houses facing the canal, with the full sunlight lighting up their red-tiled roofs.

Fortralt of a Lady

N. Mass. 1633-1695

A product of Maes' maturity like this brilliant picture is generally more interesting to a student of painting At first he than either his earlier or his later work. painted with a simple fidelity, although according to an elaborate system, which later became a very florid use of thin color and a brilliant palette. He has endowed this portrait with all the distinction at his command, composing a rich background of blacks and grays, which both harmonize with the sedate and gentle dignity of the figure represented and serve to enhance its fragility and pallor.

The wealthy commercial and manufacturing cities of Flanders developed a brilliant school of painting in the fifteenth century. Their pictures are the first wholly successful combination of color with oil, and, whether secular or religious, they depict the things in which the contemporary Flemish burgher took an interest. Bright textiles. jewals, portraits, architectural detail, landscapes which seem to be viewed through a reducing glass, are painted in warm color, and the influence of the ministurist's art is very

apparent

The picture shown opposite is a beautiful example of the early Flemish school. Although ordinarily attributed to Rogier van der Weyden, it is argued with some reason that it is by Gerard David. The subject is St. Lake drawing the portrait of the Virgin, one of the legends of St. Luke. His usual symbol, the us, is seen in a small room at the right, under the colored window and the book. The Virgin is scated under a emopy of Flemish brocade, on a Gothic wooden bench, on which is carved the Temptation of Eve. A loggia opens upon a garden with violets and other flowers, where a man and a woman are looking over a parapet The distance presents one of those landscapes which the Flemish artists delighted to paint.

The picture is upon an cok panel, and, like many other productions of these wonderful painters, is remarkable as well for its draughtsmanship and the establishment of forms in pure grisville as for its color in its completed state. It is repainted in parts. The columns, the cushion on which the Saint kneels, the dark folds of the Virgiu's robe, and the sky and distance on the right, are easily distinguished as the work of a restorer. Beautiful as the original work is when viewed close at hand, its color is still more luminous when

looked at from a distance.

St. Links Denoving the Particul of the Virgin Flowigh School, Piftmenth Century

Amor Maria de Sebedi

Anthony Van Dyck, 1231-1811

A burgher's wife dressed in her most costly gown. This partrait is identified with that formerly over the family tomb in the cathedral of St. Gudnie at Brussels.<sup>1</sup>

<sup>1</sup> Rocaes, Finifzig Menterwerke von Van Dyck, Leipzig, 1900; p. 85

Arnuald d'Amility Philippe de Champsigne, 1809-1674

In 1647 Arnauld d'Amility, elder brother of the famous Dr. Antoine Arnauld, had deserted the caurt of Louis XIII and was living at the Abbey of Port Royal des Champs, not many miles from Versailles, where he devoted himself to the religious life and to intellectual pursaits and the cultivation of his garden. The portrait shows him as he was, a man of intelligence and amiability. Philippe de Champaigne, Flemish by birth but French by choice, was the painter of Port Royal, and d'Audilly a noted altherent. Artist and subject make this painting an historic document of moment.

Permatent

Chamile Gallle, called Lorentae, 1600-1982

Parassian, one of the few pointings in the Museum representing a mythological subject, is an important example of Claude Lorraine, who painted especially landscapes, in which he endeavored to express various effects of light and transparent atmosphere. He exercised a great influence upon modern painters, upon

Turner lu England and Corot in France.

This picture was painted for the Constable Colonna in Idai. In the disposition of the figures of the picture Clande was inspired by the famous fresco of Raphael in the Vatican, representing the same subject. The Muses are assembled on Mt. Helleon, listening to the lyre of Apollo; nearby is the fountain Hippocrene, which regains caused to spring up with a blow from his losd. But in a picture by Claude the figures always count for little; its charm lies in the poetically-conceived landscape, with its harmony of line and delicately-blending, soft color.

The Hall of the Foundation

Francis Housen, 1744-1770

The Museum also passenses "Going to Market," a emorphism piece to this pleture.

Boucher's talents were devoted to the entertainment of the luxurious court of Louis XV and the carele of Madame de Pompadour. His casel pictures, mural paintings, deaigus for tapestries and scenery for the theatre reflect the taste and temper of his day, its pleasure in what was graceful, no matter how unreal, its determination to ignore everything painful or umpleasant. Joan Marc Nattier, 1685-1706, was the portrait painter of this same society.

The world for which Boucher painted was weary of the academic compositions of the days of Louis XIV. It had welcomed the "fêtes galantes" of Watteau, 1684-1721, and of Lancret, 1000-1748. Boucher's successor, Fragonard, 1732-1806, painted still more intimately its manners

and fashions.

Benjamin Franklin

J. S. Duplensia, 1725-1802

During his sojourn in France, 1776-1783, Franklin's portrait was painted repeatedly. He wrote in 1780: "I have at the request of friends sat so much and so often to painters and statuaries, that I am perfectly sick of it." The portrait by Duplessis, of which this is one of several replicas, is considered the best.

Lent by the Boston Athenacum.

Franklin's Works, edited by John Bigelow, v. VII, p. 96.
 See McClure's Magazine, Jun., 1807, p. 269.

## PHENCH PAINTING IN THE NINETEENTH CENTERS

A notable characteristic of the art of the nineteenth century is the enlargement of the range of subjects treated in painting. Géricault, followed by Delacroix (see p. 180) and the romantic school, reflecting the wilesprend unrest which led to the Revolutions of 1830 and 1848, substituted scenes from the novel, history, contemporary romance and tragedy for the academic subjects of David and the classicists. Delacroir Fromentin, and Decamps made known the life, and painted the brilliant colors of Algiers and the Levant

Influenced by Constable and Bonington in England. Reasseau, Corot (see p. 170), Daubigay, Diaz (see the picture called "The Descent of the Bohemians") and Dupréture called "The Descent of the Bohemians") and Dupréture called "The Descent of the Bohemians" and Dupréture added the vast domain of bandscape painting to art. Others like Troyon painted animals with landscape. With them at Barbizon was Millet, a peasant from Cherbourg, who painted the peasant at his work. Millet once wrate: "Devoid though the peasant's toil may be of joyonaness, it nevertheless stands, not only for true laman nature, but also for the lafticat poetry." (See up. 181–185.)

The most radical departure of the century came after 1850 with those artists, later known as the Impressionists, among whom Manet was the pioneer and Monet the most consistent exponent. Manet said, "The principal person in a picture is the light," and these artists rendered light, the light of the air, the light of every object and its reflections on other objects, and so accomplished their picture.

The end of the century has welcomed paintings which depict the life of the laborer in all its phases; every side of life has been touched with beauty. There has been an increase in mural decoration: and portraiture, which has produced great works all through the century, still continues its activity.

Portrait of the Marquis de Pastoret, Chancellor of France, 1828 Paul Delaroche, 1297-1856

Delarcehe is principally known by his historical pictures and by his mural painting decorating the hemicycle of the Academy of the Beaux Arts in Paris. This portrait shows him a master also in portraiture. The features of the dreamy, melancholy countenance are studied with the conscientiousness of a primitive painter. The portrait was probably painted in 1829, when the Marquis had just been made Chancellor of France.

Dante and Virgil J. B. C. Corel, 1706-1875

Corot's art, a highly poetical interpretation of nature, depicts the most subtle atmospheric effects, such as the depicts the most subtle atmospheric effects, such as the falling light of evening or the moment just before surrise, falling light of evening or the moment just before surrise, which is the time chosen for this picture. Dante is lost in a which is the time chosen for this picture. Dante is lost in a dark wood and is rescaled by Virgil from a line, a leopardess, and a she-wolf, who has his way. (Inferno, canto I.)

Fieth, painted 1848

F. F. Eugene Delacroix, 1798-1563

This pictà is conceived in the spirit which marked Delacroix as the most important figure in the Romantic movement. Though dark, it is rich in color; and it was considered by the painter one of his most beautiful works. Delacroix was among the first of the French painters of the nineteenth century to revive the religious subject, which had been banished from French art by the Revolution and the classicism of David.

The Service

J. F. Millet. 2413-1800

This picture was among the first fruits of Millet's residence at Barbizon, and was exhibited in the Salon of 1851. Millet afterward painted the replies now preserved in the Vanderbilt Collection in New York. The Sower walks with a rhythmic step. He is bony, wan, and lean, a nevertheless life issues from his large hand, and with a superb movement he who has nothing scutters upon the earth the bread of the future."

Harvellers Resting

Primmer

J. F. Miller, 1814-1815

It is in part to Millet's disappointment over the chilling reception at first given his paintings that the world owes the wealth of drawings from his hand. His unsparing portraiture of the laborious life of the peasant fed some critics to believe him miliferent to the charms of the country. Writing to a friend Millet replied: "I find far more than charms. I find infinite splendors. I see as well as they do the little flowers of which Christ said, "Even Solomon in all his glory was not arrayed like one of these."

This pastel is an illustration of his words.

Huating the Rudwick in the High Jurus The Quarry Gustage Courtet, 1219-1877

Notwithstanding the low pitch in which this picture is painted, it is of unique force. Courbet was an ardent hunter, and "La Curie" has been called "an episode of the hunt in the governmental forest of Levier." The horn is sounding the Hallall and Courbet himself is listening. The picture conveys in various ways a vivid message of calm after tumult. The fancied vehoes of the horn seem to break an absolute stillness among the evenly planted trees.

L'Eminence Grine, puinted 1874

J. L. Gérimi, 182, 1991

Father Joseph, a Capuchin monk, was secretary and confidant of Richelicu. His powerful position was for him the name "His Grey Eminence," in distinction from his master's title. He is here seen descending the stairs of the Cardinal's palace engrossed in his brestary, while a number of courtiers ascend to some reception. They make way for him and how in token of their recognition of his influence. The contrast between the affected servility of the rich and the amassuming bearing of the friar is the occasion of the picture,

Gérôme's knowledge and his wealth of detail in telling a story make this work justly famous. The conception, it must be confessed, is not very deep - theatrical perhaps, rather than dramatic; there is also a certain dryness and lack of atmosphere in the picture, due to its artificial illumination and the artist's inattention to exact tone relations. The whole work is a brilliant illustration in color

rather than an inspired presentation of the truth,

Rose Hurses

H. G. E. Dogaz, born 1834

This artist finds his inspiration in those elements of Parisian life represented by the ballet, the cafe concert, and the race-course. He brings a subtle power of observation, a profound technique, and a sense of elegance which is

temperamental, to portray its incidents.

In the picture, "Race Horses," it is a clear but overcast day; the sky is threatening, with clouds finted like neel leaves; there are no shadows, and colors are emphasized. At the back is the height of Suresnes, with trim gardens and houses clinging to its slopes; in front is the race-course of Longchamp. Still nearer in the paddock, ready for the struggle, are eleven race horses, — high bred, nervous, and restless creatures, — with their gentlemen jockies in gay jackets.

Many influences helped to mould the art of Degas, among them the example of Manet and the principles of Japanese decorative painting.

Automodon with the Horses of Achilles Henry Regnards, 1843-1871

Xanthos and Balios, the immedal borses of Achilles, conscious of the hero's approaching death, already foretold by one of them in speech, are struggling with Automedon, his charioteer. The stormy sky with a pale glimmer on the borizon, the ominous sea, the barren shore, presage disaster,

The painter's enthusiasm for horses, his magnificent color, his facile power of drawing, are here united in an impetnous composition. The picture was Regnault's envoi as the holder of the Prix de Rome at the age of twentyfour. Three years later this happy genius met his tragic end in the last sortic against the Germans besieging Paris,

Portrait of Mrs. Polk Sir Jushua Roynolds, 1723-1798

Sir Joshun Reynolds returned to England in 1752, at the age of twenty-nine, after having spent nearly three years in Italy. He rapidly become the fashionable portrait-painter, and his career was one of unbroken success. He had, however, little technical training, and in the use of pigments was devoted to experiments too often unsuccessful; but grace, beauty, and charm his pictures always possessed.

The Palls of the Rhine of Schaffbrown (schilded 1819)

The Share Ship

J. M. W. Therear, 1775-1881

The original title of the pointing was "Slaver Throwing Overboard the Dead and Dying: Typhoon Coming on." It was once in the possession of John Ruskin, who wrote of it that "it was the noblest sea Turner ever painted." <sup>1</sup> The print collection contains fine examples from the

"Liber Studiorum" (see p. 282).

In the same gallery there is a pleasing example of Richard Wilson, 1714–1782, with the usual Italian landscape, a tower on a hill, a picture-sque valley in the foreground, and the wide stretch of the Roman Campagna beyond. With this may be compared a small work of John Constable, 1776–1837; and the fine example of John Crome, 1769–1821, which shows a distant view of the city of Norwich and its enthedral.

<sup>1</sup> Modern Painters, London, 1867; vol. I, p. 378.

Protrait of John Eld, Esq. Thomas Gainsborough, 1717-1758

Thomas Gainsborough, eclebrated as a painter both of portraits and landscapes, became one of the charter members of the Royal Academy in 1768, and lived in London from 1774. The Portrait of John Eld, founder of the Staffordshire General Infirmary, the design for whose tagade he holds in his hand, was painted toward 1772. It had been kept in the Infirmary up to May, 1912.

Le Chant d'Amone (senter-color)

Sir Edward Burne-Jones, 1833-1808

"Helm! Je sais un chant d'amour, Triste ou gal, tout a tour."

On a termer overlooking a meadow before a mediaeval town a knight sits gazing at a lady who is singing. With one hand she holds open a book and with the other plays on an organ. At the beliews of the organ sits a winged figure, blindfolded, cinthed in red, whose head is wreathed with roses. The subject, steeped in romance and poetic laney, is rendered in rich color contrasts of definite claret-purple, subdued scarlet, pale yellows, and atmospheric blues. The draughtsmanship is more genome and less artificial than in the artist's later work, when he was striving for more correct details. This water-color was painted in 1865. A larger recsion in oils of the same subject differing in some details was begun in 1868 and finished in 1877.

The poetic decorative art of Burne-Jones found expression in oils, water-color, and lempera paintings, and in scores of carloons for stained glass windows, mosaics and tapestries.

## EARLY AMERICAN PAINTING.

The earliest portrait painters of merit in the colonies, Smibert and Blackburn, were followed by John Singleton Copley. By 1774, when Copley first went to England, he had pointed a collection of portraits which give an intimate picture of American society before the Revolution. (See pp. 194, 195, 198.)

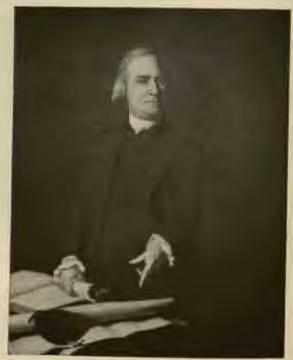

Washington Alloton latter the best of the early Miniature by Edward G. Malbons portrait painters. (See 1777-1864 pp. 196, 197, 199.)

Benjamin West went to Italy when twenty-two years old, and three years later to England. He gained the favor of King George III, helped found the Royal Academy and became its president in 1792, after the death of Reynolds.

Among West's pupils were Charles Wilson Peals and Gilbert Stuart, both famous for their portraits of Washington, and the latter the best of the early portrait painters. (See pp. 196, 197, 199.)

With Stuart in West's

studio worked John Trumbull, Robert Fulton, S. F. B. Morse, Estward G. Malbone, Washington Allston (a man of great personal charm, born in South Carolina), and William Dunlap. The Museum contains many pictures and sketches by Allston, with examples of his contemporaries, John Neagle, Thomas Sally (see p. 200), Henry Inman, W. Page, and Francis Alexander.

Samuel Adding

John Singleton Copley, 1737-1815

Painted by Copley in 1772 at the order of John Hancock, whose likeness was executed at the same time. Adams is shown addressing the British governor, Hutchinson, the day following the Boston Massacre in 1770. He points to the Charter of Massachusetts with his outstretched left hand, and grasps his brief, marked "Instructions of the Town of Boston," with the right.

Lent by the City of Boston.

Mr. and Mes. Invil

John Simpleton Copley, 1787-1815.

In the spring of 1774 Copley, then aged thirty-seven, left Boston for England. Soon afterwards he journeyed to Rome with Mr. Izard, a wealthy planter of South Carolina, and his wife. This picture he produced the following winter, and it was his first group so far as is known. It was taken back to England, and the approach of the Revolution having produced difficulties in Mr. Izard's financial affairs so that he was unable to pay for it, it remained in Copley's possession until 1823, when it was sold to Mr. Izard's grandson.

Mr. and Mrs. Izard, with a table between them, sit on a chair and sofa upholstered in rose damask with a rose damask curtain at the back on one side. Sorvenius of their Italian journey surround them. The picture is in Copicy's Boston style, with some of his early rigidity apparent in the

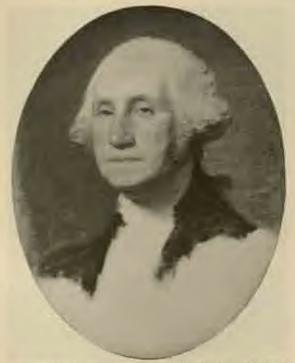

man, but the lady is painted in his best manner.

Martha Weshington

Gilbert Stuurt, 1755-1838.

These portraits of Washington and his wife were painted from life by Gilbert Stuart in the spring of 1700 at Philadelphia. Washington, accessing to the request of Stuart, permitted the artist to keep the originals and accepted copies in their place. The originals remained unfinished in the passession of Stuart until his death in 1828. The portrait of Washington served in the production of many

George Washington

Gilbert Stuart, 1755-1828

pictures up to that date. Owing to the large number of these repetitions, the portrait became widely known, and it is regarded as his standard likeness. The artist's widow sold these studies after his death to the Washington Association, by which they were presented to the Boston Athenaeum in 1831

Lent by the Boston Athenaeum.

John Quincy Adams John Singleton Coyley, 1737-1815

This picture of the sixth President of the United States was painted in 1795, when Adams was twenty-seven years

old and Minister at The Hagne.

The portrait exhibits the sense of grace and distinction for which Copley strove, though with some loss of that strength of character which distinguished his early work. It should be compared with the portrait of Adams by W. Page painted many years later.

Lent by Charles Francis Adams,

Major General Henry Konz

Gilbert Stuart, 1733-1828

Artiflery officer, companion and adviser of Washington, Secretary of War 1785-1794. Judging from the age of the General, the portrait belongs to the time of Stuart's ripest production, about 1800. General Knox, well-educated and affable, commended himself to the artist as a brother spirit, and he is here the subject of one of Stuart's most successful portraits.

Lent by the City of Boston.

The Torn Hat

Thomas Sully, 1789-1872

Sully has here rendered the happy inspiration of a boy's healthy, attractive face seen in warm simlight with the shadows illumined by reflections,

Lent by Miss Margaret Greene.

Girl Reading William Marris Hant, 1824-1879

The Museum is rich in the work of Wilham Morris Hunt. Several other oil paintings, as well as a number of water-colors, sketches, and drawings in charcoal, are on exhibition in the Hunt Memorial Gallery, over the Library of the Museum.

The Machinith of Lyme-Regio J. A. McNeill Whiatler, 1884-1903

The Museum owns also a companion piece called "The Little Rose of Lyme-Regis." Whistler's etclings may be seen in the print collection.

The Fog Warning

Wandlow House, Lt. 2-1910

The rapidly advancing fog warms the fisherman to return to his ship before it disappears and he loses his bearings.

In addition to this picture, there are on exhibition several water colors by Homer, and the painting known as "All's Well."

Caritae

Abbott H. Thoyer, 1845-

Mother and Child Gauge de Firest Brush, 1855.

Isabello, or The Pot of Ravil J. W. Mescander, 1856-

Isabella, whose lover has been murdered by her brothers in a wood near Florence, secretly hides his head in a pot, in which she plants sweet basil. 'The story is told in Boccaccio's "Decamerone," and in Keats' poem, "Isabella, or the Pot of Basil."

Partrait of the Muses Boil

John & Surgent, 1824-

Born at Florence of American parents. Pupil of Carolus-Duran. Has lived mostly in Europe. Painter of portraits and of genre subjects.

This portrait, one of the first works of Sargent, and which contributed to establish his reputation, was painted in 1882.

Given by the heirs of Mr. Edward Darley Bott.

#### THE NEARIN ORDERT

Saracen, meaning "Eastern," was a term applied first to the Ardia, later to all Muhammadaus, and in the Middle Ages to all Eastern opponents of the Crusades. There were many centres of Saracenic art at different periods of the Arab Conquest, including Central Asia, India, the Euphrates country, Syra, Egypt, Morocco, Spain, Sicily, and Turkey. Some of these developments we designate by special names, as Persian, Indian, or Moorish art; but all are related to one another. In some respects the most important examples of the Saracenic style are found in Egypt because of the almost continuous record furnished by the musques of Caro, which show, in their simple lines and restrained decoration, the purest form of the art as distinguished from the more fanciful outgrowth in Spain or India.

Much light has been thrown on the ceramic art of the Araba within the last few years by excavations at Rakka and other rumed cities of Syrm and Persia. The pottery from Rakka seems to be of the earliest origin (ainth to twelfth century), and some of it bears a strong likeness to the blue glazed jars found at Babylon, The rubbish hears of Fostat (Old Cairo, destroyed about 1165) and of Kus, near Luxor, have yielded fragments of dishes, the most interesting being decorated with a brilliant raby and gold lastre on a white tin enamel ground, which method of enamelling was employed on the glazed Egyptian pottery dating as early as 1500 B. C. Similarly justred tiles have been found at Rhages, Saltanich, and Veramin in Persia, and it is not yet possible to decide whether the art was carried from Egypt to Persia or rice versa. But the former seems more probable, since the earliest dated tile is of the twelfth century, and a noted Persian traveller of the eleventh century speaks with enthusiasm of the lustred pottery which he saw at Fostat as being an art unknown to him. Many of these tiles bear inscriptions, floral scrolls, and figures with strongly-marked Mongolian features, which suggests that they may have been produced by some of the Chinese workmen brought into Pensia with Chinghix Khan early in the thirteenth

century.

Pots and bowls of the thirteenth and fourteenth centuries, from Syria, are painted in blue and greenishblack under a glass glaze. The lastred dishes and vases made by the Moors in Spain and Sicily in the affecult century, and later by the Italians at Gubbio and Urtime, all hear a family resemblance to the tiles and fragments, although the styles of decoration vary, The pottery made under Turkish influence at Rhades, Danascus, and Kutahia date from the fifteenth century : and in the sixteenth century factories were established at Konbacha, in Daghestan; at Kirman in the seventeenth century, and at Kashan and Bokham in the eighteenth century. Lustred semi-porcelain was produced in the sixteenth and seventeenth centuries in Persia, the colors being golden yellow or pale green lustre on dark blue, or raby lustre on white-

The Arabs worked in many metals, and the examples remaining to us show delicate pierced serolls or claborate inlay in gold and affect, as well as engraved medallions, inscription and figures, or the damascened gold ornament so generally found on the sword blades for which Damascus was noted. A few carved ivory panels of the thirteenth century are still in existence; and beautiful mosque lamps of glass with colored enamel desoration are found in several European collections. Among the illuminated manuscripts, the Koman, containing the teachings of the prophet Muhammad, is the most important book of the Arabs. The highest art of the period is lavished on its two title pages, which are ornamented with beautifully written texts set in elaborate and delicate floral scrulls, painted in red, blue,

green, and gold; and the carved, gilded, and painted leather bindings have also great charm. Some of the greatest treasures of the Khedivial Library in Cairo are early copies of the Koran which were made for the Sultans. The Makamat of Hariri is another famous book. The works of the Persian poets have come down to us in illustrated form.

Syrian Encompled (Hoss Twolfth to Thirteenth Century Hose Collection

Printer Tile

Thirdrouth Century

Star Tile: a rare specimen of Persian art dated, in its inscription, 657 of Hegira (1259 A. D.). It is probably from Veramin, a town in Northern Persia, and its date pats it in the period of the Mongol invasions and within a year of the fall of the Raghdad Caliphate, one of the great events in the history of the nearer East. This particular tile is reproduced in Dr. Martin's great work on Persian Carpets. There are other and very interesting examples of the same art in the Museum.

Turkish Plate

Sixteedi Century

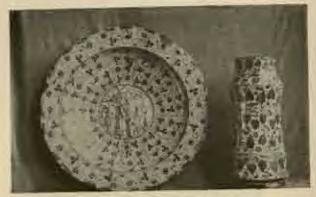

Turkish eemmie indu-WATER WEIT both encod Twe Persia and China. This plate belongs to a class usually called Rhodian. although it was probably made in one of the aminland citiesed Asia Minier The main design of the plate shows flowers of the field. The border design lus been interpreted as represent-

ing the clouds and the sky. The express tree (in the centre of the plate), the thistle leaf, the rose, the inlip, the wild hyacinth, and the carnation are familiar in the designs of Persian textiles.

The beauty of this plate, from the Caucasus country of Daghestan, is found in the harmony of its colors: greens, reds, and browns, upon a soft yellow - brown ground which is further enriched by the crackle of the glaze. The plate was perhaps a west-ding present.

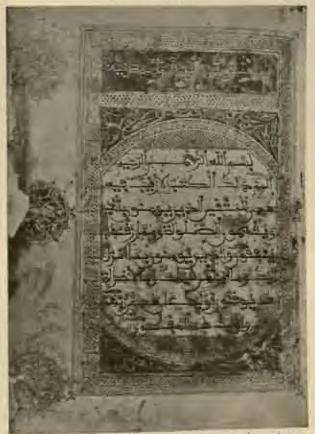

Plate from Koubacha, Dagheston Sixteenth Century

Hispano-Morenpie Deng Vase and Plate Valencia, Spain, Fifteenth Century

The best known Hispanis-Moresque ware was made near Valencia, Spain, in the fifteenth century. The lastre was produced by the action of heated anoke on the metallic oxides which are applied over the white enamel glaze. Lastred ornament is also characteristic of much Persian and Arabic work. The Moorish potters of Spain worked for Christian patrons. Lastred arms, representing marriage alliances which may be dated, appear on many pieces, and by this means the sequence of the decorative patterns is determined.

The rine leaves on the "Albarello" or Drug Vase shown in the illustration are alternately in blue and in light brown butte, the blue leaves being amiler the glaze and the butteril leaves upon it. The wild bryony, a local plant of Valencia, appears in blue and butte as the principal decoration of the plate. In the centre of the plate is the monogram LHS, which was widely popularized in the fifteenth century by San Bernardino of Siena. Valencia pottery was often exported to Florence, Siena, and Venlee.

### PERSON PAINTING

The beginnings of Perman painting go back, according to Persian tradition, to Mani, a religious teacher, the founder of Manicheism, cruesfiel in A. D. 276. And in fact the remains of early Persian or Sassanian painting are associated with the fragments of ancient Manichann MSS, discovered in the ruins of Central Asian cities. Subsequently there arose a Muhammadau civilization centred on the one hand in Eastern Persia and Turkestan, in the cities of Herst, in Khurasan and in Bokhara, and on the other under Arab domination in Mesopotamia and Baghdad. Nothing remains of the early painting of the Eastern School, but two or three Ambian MSS, of the thirteeuth century survive. Pages from the Diescorides MS. dated 1222, and from an early work on Automata are represented in the Museum collections. These are magnificent examples of draught manship, relying more on outline than on color, and with some flavor of Byzantine feeling still perceptible in them. Ambien culture of Western Persia was almost destroyed by the Mongol invaders in the thirteenth century, but these appalling disasters also prepared the way for the foundation of Person unity and the development of Person art, as commonly understood. The Mongols adopted the manners of civilization: Chinese culture was their model, and though at first they were unreleating enemies of Islam, in 1981 they adopted the faith of their subjects and became to all intents and merocada Persians.

Persian art of the fourteenth century is dominated by Far Eastern (Mongol) influences. The drawings show fine nervous strokes, with calligraphic tendencies, and little color, in place of the flowing Arabic miline. The great illustrated MSS are either medical or historical; the finest examples are the Manah at Hayawan of the Morgan Collection and the Jami at Tawarikh of Landon and Edinburgh. The same Far Eastern influences are recognizable during the fifteenth century under the Timurids, but the themes of Persian epic and lyrical postry are constantly chosen for illustration; the Museum possesses excellent examples from the Goloubew and Ross Collections, illustrating the Shah Namah of Firdawsi and the Khamsa of Nizami (stories of Shirin and Farhad, Laila and Majnun, etc.).

The most famous individual Persian painter is Bihzad (co. 1450-1525), who is unrivalled in the extraordinary fineness of his brush lines and the jewelled quality of his color. As a portrait painter he is somewhat of an impossior, and his choice of subjects—dervishes and teachers, with comparative neglect of spie and warlike themes—shows a more spiritual tendency than is usual in Persian art. It is to be noticed in this connection that Persian painting, with very rare exceptions of scenes from the life of the Prophet, particularly the Assension, is purely a secular art—a necessary consquence of the orthodox Muhammadan attitude towards the arts of representation. Islam has tolerated but not impired the painter.

Persian pointing continues to flourish under the Safavids in the sixteenth century. The Museum possesses fine examples from the Golonbew Collection by Sultan Muhammad and Aga Mirak, popils of Bilicad.

In the seventeenth century, in the time of Shah Ahbas and his court painter, Riza Abbasi, Persian art is already in decadence. It has become an art of display more than of feeling, and the brilliant draughtsmanship is aerobatic—in leoking at one of these calligraphic drawings one remarks involuntarily "How clever!" rather than "How fine!" Every figure is dressed in the height of an elegant fashion, and charming ladies are reclining at their case on flowery lawns, where all is for the best in the best of all

possible worlds,—the world of Watteau, to offer a western analogy. What is vital in Person pointing at this time survived in India rather than in Person proper; the tradition of Bibani is still to be recognized, especially in portranure, in Mughal painting of the schools of Akhar and Jahanger.

#### WICAVINO.

From the East came the arts of weaving and needle work, and with the mechanical knowledge came also the designs. As pupils follow their teachers closely at first, so the European countries followed the Oriental ones, using many of their motives, and strong Oriental feeling is found in the early weavings of Italy and Spain. Tapestry weaving, as the simplest form of the art, was practised by many primifive peoples. The earliest and crudest pieces owned by the Museum come from the Coptic graves of Egypt, first to eighth century A. D. (secabove and p. 232), and from the graves of Pern (see p.231). These latter pieces were made before the lavasion of that country by Pizarro in 1531. The looms used at present in the French tapestry works at Paris are made on the same principles as those upon which the Coptic pieces were woven. By the fifteenth and atxleenth centuries tapestry weaving had reached its greatest height in Europe, and the Museum is fortanate in owning two beautiful examples of the work of Flanders at that period (see pp. 287-289). Of later date (seventeenth and eighteenth centuries) are the pieces in the Collection from the Brussels and French workshops (see p. 241). From China and Japan, in addition to the large Chinese tapestry illustrated on p. 372, are many smaller pieces made of silk. Oriental rugs, like tapestry, are still woven by hand, and with as simple looms as those that were in use many hundred years ago. In spite of the great improvement made in machiners by the Europeans and Americans, the Orientals, with their hand looms and vegetable dyes, still surpass all other peoples in the beauty and durability of their rags. Of the remainder of the Collection, the larger part of the wravings consists of velvets, brocades, and damasks from Persia, Turkey, Italy, Spain, and France. The Persian, Turkey, Italy, Spain, and France. The Persian, Turkish, and Italian pieces are especially noteworthy for their beauty of color, material, and texture. S. G. F.

The Overfine of New, the Registers of Chebs, the Scientify, and the Oracifician Floreich Tapestry.

The tapestry on the preceding page is woven with silk and wood. Scated at the base of the columns that divide the tapeatry are Joremiah, Peter, David, Andrew, Isaiah, James, Hogea, and John, Running through the lower part of the tapestry are two ribbons; on one in part of the Apostles' Creed: "Credo in Desim patrem omnipotem, Creaturem cell (coell) et terrar et in ihesum (Jeann) Xpristum (Christum) Filium e(j)on nnictum) Domita hun nort(r)um. Qui conceptus est de Spirita Sancjo natas ex Maria Virgine passus sub Poncio Pelato cracifixus mortuus et sepult(us) ": "I believe in God the Father Almighty, Maker of heavyn and enrill; and in Jesus Christ, His only Son our Lord, Who was conceived of the Holy Ghost, born of the Virgin Mary, suffered under Pontins Pilate, was crockfied, dead and buried." On the other are "Patrem invocabinus qui terran (m) fecit et comildit C(o)elos": We will call upon, or pray to, the Father who made the earth and founded the beavens; and the following lines from the Old Testament: "Dominus dixit ad me filius meus es tu ": "The Lord said unto me, Thon art my son " (Psalms U. 7); " Ecce virgo concipiet et pariet filium ": "Behold, a Virgin shall conceive and bear a son " (Isamh vii. 4): "O mors oro mors tun morsus time ere inferne " ("Ere mors tua, O mors! morans tuns ero, inferne "): "O death, where are thy pliques? O grave, where is thy destruction?" (Hoses xiii. 14). Letters decorate Isniah's garments, the lois cloth of Christ, the robes of the Virgin and Joseph, and the but and scabbard of the man standing at the right of the tapestry. On the scroll burne by an angel is "Gloria in exserlis (excelsis) Dea et in ter" (" ra pax hominibus bonne voluntatis"): "Glory to God in the highest, and on earth peace, good will toward men" (Luke H. 14).

See the Museum of Fine Arts Bulletin, February, 1909, Vol. 10, Whole No. 37, pp. 5-7.

The Crossing of the Red Sea routy Sixtemath Contact

Plentid Topothy

The foregoing tapestry is the product of the best period of the art in Flunders. On the left, Pharaoh on a richly caparisoned horse, crowned and brandishing a sword, rides in the midst of his disheartened soldiers, arging them to press forward in spite of the constantly rising waters, while Moses upon the shore, calm and complacent, points out to the Israelites the contrast between their position, the chosen people of the Lord, and that of their oppressors, the Egyptians. The safety and comfort of the Israelites is emphasized still further by the land on which they stand, carpeted with exquisite flowers of many varieties and shaded by tall trees. The people are represented in the dress and style of the artist's own period. The Egyptians wear the armor of the lifteenth century, the Israelites, the costume of civilians of that time. The areas occupied by the varions colors - greens, blues, reds, and soft dull lans - are proportioned so as to give a very harmonious effect. Silk and gold add light and richness. The whole is surrounded by a compact border of flowering branches tied with ribbon.

The Efficiency of the Survament
French Tayoutry Early Scatterish Century

Two scenes, the legends beneath explaining their aignificance.

Par devant le minet Sacrament.
Mais son chiral se bumilis.
Pays cent le payen fermement."

(A pagan passed before the Holy Sacrament without homage. His horse, however, abased itself; whereapon the pagan became a firm believer.)

Machinesa and Child in a Niche Lores della Robbin (1308-1482)

According to Luca's wont he has immortalized in this relief a beautiful young Florentine mother and buly of his time. The double curve of the Madoma's veil and her mantle gracefully balance the winding line of the Child's head and body. A counterpart of the relief in the collection of Mrs. George T. Bliss of New York differs from it in various minor particulars.

Best of a Youth, of Marble Radian, Fifteenth Century Style of Minn do Frende

No external evidence exists regarding the authorship of this bast, but the peculiar refinement of execution and delicacy of sentiment which mark it are characteristic also of the known works of Mmo da Fiesole. The downcast eyes suggest that the head may have been modelled from a death-mask.

French, Lad of Fifteenth Contery

Veninh, Franciscust Cartery

Chest with Pietral Panels Italian, Fifteenth to Sixteenth Century

Front Penel of a Chest Franch, Into Fifteenth Century

Wood Ponels, Flamboyant Gothic, Steteenth Century

To see the great cathedrals of the Gothic age one must journey from place to place in western Europe, but the spirit of the time is felt in even its smallest works. The torso of the Madonna and Child pictured on page 247 represents the style of the Pisani; the small tvery carving is French work of the fourteenth century. The elaborate metal cross is later.

The marked by characteristic patterns in the tracery or frame work of the glass of windows. In the earlier period these were quite simple; later they became connected geometric patterns, which in time often changed to a design of flowing and complex curves. These window tracery patterns were applied to atone surfaces, to wood carving, and in fact, wherever ornament was used. The wood purels pictured here are all of late design and belong to Northern Europe, where the Gothic style held its own long after Renaissance ornament derived from classic art had taken its place in Italy.

### LACE

Lace is divided into two classes, needle print or print lace. made with a needle and loop stitch, and tobbin or pillow forr, waven on a pillow by the use of bobbins and pins. Netting and knotted fringes have been found in Egyptian graves, and they, as well as delicate open materials, to which embroidery was added, were made in the East at an early date. But we have no proof that real lace was made before the lifteenth century, when we find it decorating the costurnes of people in pictures. The first point lace is a deselopment of embraiders and was made by drawing threads from lines and binding together in groups those that were left, to form a pattern. Then openings were cut in the linen and partially filled with needle work, the linen being enriched with embraiders. These laces are known as drawn-work and cut-work. Next came reticella, in which it is often difficult to see the linen foundation. Floral designs were first used in punto in aria (stitch in the air), called so because it was made without a linen foundation. From this came the mised points and various needle laces, made without a net ground, or "reseau." To Italy is due the credit of their origin, but they were copied and adapted by other countries during the sixteenth, seventeenth, and eighteenth centuries. When, in the eighteenth century, ruffs and broad flat collars were supplanted by full ruffles, a softer lace was needed, and France made the needle point "réseau," used in Alençon and Argentan laces, and Italy became the imitator. Flanders and Italy dispute the origin of bobbin lace. In Italy the designs and execution were strong and hold, but in Flanders the finest and most marvellous workmanship was found.

S. G. F.

Books.—Mrs. Bury Pulliser, History of Love, revised by M. Jourdain and Alice Dryden: Famest Lefsburg, Embrodery and Love, Their Manufacture and History, translated and calarged, with notes by Alan S. Cole, A. M. Sharp, Point and Pillow Lace, These books may be consulted in the Library.

Spanish buratto

Seventeenth. Contary

Part of a long strip. The burnto or boiling cloth upon which the design is darned is made on a loom. This work was done in imitation of darned netting. The designs of the bottlers are of earlier date than the figures in the middle.

Italian Embroidery

Secretarith Century

The white linen foundation, left plain except for a pawder of French knots, makes the design, while the background is solidly embroidered in tent stitch with red silk.

Three scenes: first, Adam in the Garden of Eden: second, the creation of Eve: third, Adam and Eve and the serpent, who is wound around the tree of knowledge and is in the act of giving the apple to Eve. Above, a border with these words: "Adam," "Adam et Em," "Qui magnesse if pomo" (here they are enting the apple). Below, a border of plant forms, birds and unimals.

Italian Retirella

Sixteenth Century

Design of figures crudely conceived, but well balanced. Those most easily recognized are Adam and Eye, who stand with one arm akimbo and the other touching the tree, up which the scrpent wriggles to get the forbidden fruit.

Halian Cut-work (punto taglinto, or tela taglinta) Late Sixteenth Century

The needlework filling of the open spaces in the linen was done with white thread, while for the laid-work embroidery gold thread was used. This use of gold thread us well as the design shows strong Eastern influence.

Florentine Cut-work (punto tagliato, or tela tagliata) Eighteenth Century

The combination of many embroidery stitches and of pumb in aria with the cut-work adds greatly to the beauty and value of this piece.

L'emfano l'ant (junte un atea)

Secontomili Century

A new example, strong and bold in design, and interesting as the connecting link between the gennetrical patterns of reticella and the elaborate floriated patterns of the later Venetian points.

Penetian Point (punto a riliano a forumi) Secretaralle Century

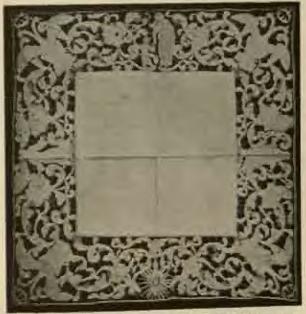

Bold and strong in design, and of great delicacy of execution.

Venetian Print (punto a corellina) dbout 1700 A.D.

French Point Eighteenth Century

Chalice Veil, or Curporale, of Robbin Love Sevenbouth Century

In each corner a double-headed eagle with a crown; in the middle of one side the Host, supported by cherabim; opposite, St. Symphorian, bearing a marter's paint and led by his mother. Balaneing these on the other sides are St. Francis of Assisi with the stigmata, and two birds, and St. Tillo, with an abbot's staff and challee, and two crowned lions. Scrolls fill the intercenting places. This piece may possibly have been made in Flanders by Spanish sums. This would account for the technique, which resembles the work of both Milan and Flanders, and for the choice of saints and motifs. 260

French Topotry

Elghlorath Deathry

Fragment of the border of a tapestry. Figure of a more partly dressed in behatrops cloth, scated and playing a pipe; two birds, flowers, and fraits. The cream-colored ground is entirely of sitk. The design, largely of sitk, is in flesh colors, cherry, beliotrope, green, and cream shading into brown. This is a good example of the delicacy of the French coloring and of the fine-sors of the work done in that country in the cighteenth century.

Panels in Wood and Staces; Gilded

In the eighteenth century the French were the benders in matters of good taste and elegance: French furriture, French interior sleevestion as well us French manners, set the standard for Europe.

There are in the Moseum eight large decorative panels of the eighteenth century which have designs of great delicacy.

The figure on one of the two her shown is reminiscent of Jean Google and the French Remaissance. The panels should be compared with the old gill frames of the same period around the paintings by Boucher in the Pietare Gallery.

Franch late Elghbrech Contary

The Music Lamon

Chalans Porcelain, about 1760

This Chalses group, modelled by Roubillac after Wattonu's picture, "L'agréable lecon," is typical of that phase of eighteenth-century taste which amused itself by playing at shepherd and shepherdess and was much given to sentiment.

While Chelsea groups are made of artificial porcelain, the contemporary German figurines, also well represented in the Museum, are of true porcelain, which was first made in Europe at Meissen in the eighteenth century.

Wedgewood Blue Junger Ware

Late Eightwidh Century

In Jasper ware, the most beautiful of the Wedgwood productions, white cameos are placed upon a colored ground. Jasper ware of the best period (1786-1795) is recognized by its fine grain, even surface, and satiny feeling. The

white reliefs are sharply modelled and are highly polished. The body color is either like, pink, sage green, yellow, black, or some tone of blue. All the different varieties may be seen in the Museum collection, which contains also numerous smaller objects in Jasper ware, such as small boxes, jewelry, etc., as mall boxes, jewelry, etc., the astronomer Sir William Herschel, is pictured here.

Wedgeood Plaque Green Jasper Ware

The art of the blacksmith in the Middle Auen was more advariated in France than in any other country of Europe, and the most intereding remains of that period are hinnes which at first consisted of a simple strap, but later became very elaborate and covered the greater part of the door, often serving as a kind of unour against robbers. The magnificent hinges on the doors of Notre Dame in Paris are early thirteenthcentury work and show the skill attained by the French and this in stamping the designs on the iron with metal dies.

Of this same period, but less claborate, is the grille surmounting the tomb of Queen Eleanor in Westminster Abbey,

Interhand Secolls and Lauren Engraved and Gilded Austrian, Eighteenth Century Hous Collection

Wrought Iron Capilla Bereket

Fine galles of civeted quatrefuls were made in Italy; but ironwork was a later development in Germany, impaired by French examples; while the Flemish in the fifteenth century became mated for their tall iron apires, which are still seen on the Cathedrals of Antwerp, Ghent, and Bruges.

#### Assum

Amber is the feesil gum of a tree which is found embedded in lignite to coal of later formation than anthracite or bituminous), or washed up on the shires of the Baltic Sea, in Suelly, Burma, Nantucket, and other parts of the world. The Baltie amber is of a brilliant translacent orange color or of an opaque yellow, which darkens greatly with age, but the Siellian specimens show a wooderful mage of color from pale yellow through red to dark green, and occasionally a piece is found with bluish reflections in it. From Burms comes a dark opaque brown variety with gold flecks, and our Nantucket umber is also manne, mottled cream and light brown tones, with more of the beauty of the others.

Amber has been consulered as a gent from the carliest three, and many uncent writers mention it in their works. Carrell specimens and beads have been found in Italy dating from the Etruscan period, and from the fifteenth century it was need for statuettes, reliquaries, chess and checker bounds, rosaries, etc. The Buffum Collection is unique in America, but in Europe fine specimens can be seen in the Bargella, Florence; the Kamer Friedrich Mosesan, Berliu; in the Manich and

Naremberg Museums.

Crucifix and base of Sicilian amber with figures of Christ and two Saints in opaque German amber. Seventeenth century work. Buffun Collection.

Sitrer by Paul Hovere

Bisken, 1799

American Colonial silver, simple in design and substantial in weight, is distinguished by purity of form, line, and proportion rather than by rich ornamentation or careful detail. As was natural, the designs resemble contemporary English pieces, but the men who fashioned them were Americans, often influential citizens and holding positions of public trust. John Hull, one of the earliest silversmiths in New England, was made Master of the Mint at Hoston in 1624, and was allowed to keep one in every twenty of the plue tree shiflings which he coined. The silversmiths were also the earliest American engravers.

The silver from the workshop of Paul Revere is not only beautiful in itself, but much of it is of historic interest. The tenped and augus bowl illustrated above, each have the following inscription: "To Edmand Hartt Constructor of the Frigule BOSTON. Presented by a number of his fellow vitizens, as a messorial of their name of his Ability. Zeal & Fidelity in the completion of that Oranment of the AMERICAN NAVY. 1799."

Ceres Marble, by Augusts Rodin, b. 1840

# INDIAN ART

The collection is shown in the Indian Coreidor opening to the left from the Keruma

Availokiterenza (Bidkivattsi), rested as a toucher. Buddhist browns. Ceplan. VIII. century, A. D. Ross-Communication of Collection

## INDIAN ART

NDIAN art embraces the distinct traditions of Hinduism (Brahmanical, Buddhist and Jaims) and of Islam.

The subject matter of Hinda art is hierabe and spic-It does not aim at illustration or record. It is not an art of impressionism, representation or self-expression. but abstract and anonymous. In prantive and classic pleases it unites canonical form with swift screw gesture and temler feeling: in decadence it preserves an original grandeur of design, though the gesture is no longer felt. and the form is over-emphasized or over-ornamented. Hindu art is never interested by the mere appearances of things, but interprets them as symbols of general ideas. Moreover, the true work of art is not an object, but something which springs into being between the arrist and the spectator and is due to the activity of both. In other words, the appreciation of art is not a question of taste or ethics, but of creative inagination. Without this, the spectator, however well he knows what he likes or dislikes, may remain unmoved before the most beautiful work: with it he will understand the againcance of the most awkward neumitive, and the mean ing of a great tradition will be recognized even in desudent examples.

An art of ideas cannot be pulsed by standards of verisamilitude: it must be approached as expression. There is no such thing as "accurate drawing," but that drawing is best (as Leonardo says) which best expresses the passion that animates the figure. We must look their for truth of feeling and movement, rather than for scientific knowledge of perspective.

and anatomy. To appreciate art in this way as expression, however, demands a knowledge of what to be expressed a knowledge which the contemporary artist is free to take for granted, but which the student of an unfamiliar art must either possess intuitively or take some pains to acquire. To appreciate anything more than the superficial charm of Hindu art therefore demands a certain study of the ideas it exists to express. These ideas, being primarily devotional and philosophical, are somewhat remote from the tendencies of modern life, and it is owing to this bias and to differences of taste and technique that Hindu art at first sight appears strange. We may be assured, however, that we have begun to understand it when we begin to see that it is first of all art, and only incidentally Houm art.

It should also be observed that while Indian art can be classified as Brahmanical, Buddhist or Juina, these are sectarian names, and not distinctions of

style or period.

The greater part of Indian art surviving from the 3rd century R. C. to the 4th century A. D. is Buildhist, and after the 7th century (except in Bengal up to the 12th century, in the Javanese and Cambodian colonies until the 14th, and in Nepal and Ceylon, Burma and Siam up to the present day, and with exception of Jaina art) it is distinctively Brahmanical in subject.

Early Buddhism, like the Upanishads, could not and did not inspire an immediate expression through art. Developing into a cult, however, under Asaka (272-232 B. C.) Buddhism adapted popular Indian art to edifying ends; but the Buddha himself is represented only by symbols. A little later the growing spirit of devotion in the development of a popular religion led to the creation of anthropomorphic images as intermediary objects of worship. The typical Buddha figure, evolved already in the first century

B. C., is that of a contemplative figure scated in the traditional Indian posture with crossed legs and steady gaze, "like a flame in a windless spot that does not flicker"; this must have presented itself to the Indian imagination as the only possible form in which to image One-who-had-attained-to-Perfect-Wisdom. Standing and reclining images were soon added, in which there are certain elements of Western origin. This Western (Graeco-Roman) element is most compicuous in the Gandhara provinces of the Northwest frontier. The purely Indian types are characteristic of the south and of Ceylon.

The Westers elements are gradually assimilated into a definitely Indian art under the Guptas (320-480 A. D.); and the Buddhist art of this period and one or two succeeding centuries provides the formulae which are repeated in the Chinese Buddhist art of the Wei and Tang times. By this time, moreover, Brahmanical sculpture, hitherto executed mainly in perisbable materials, begins to be found in stone. The carliest works in the Museum collection, spart from some fragments from Gandham, are a massive head and torso of Vishma, and a much damaged Heml of Buddhin, both of the Gupta period and in red samulature.

Indian art of the classic period (7th and 9th century) is rather more distinctively Brahmanical than Buddhist; it shows an equal mastery of feeling and technique and a highly conscious and cultivated taste. The Museum possesses two small Buddhist browns of this period, of which one at least (see p. 272) exhibits the characteristic qualities of the finest contemporary work on a large scale in stone. Spiritual power is realized in the elimination of everything mussential, and expressed inevitably through physical grace. No better example could be selected for study by those

who approach the art of India for the first time. Of nearly equal importance is a series of several Buddhist (see p. 281) and one Brahmanical copper gilt images of the 19th or 10th century from Bengal or Nepal; those may represent Turanatha's "Eastern School" of Varendra, and it is not impossible they are by one of the masters Dhuman or Bitpalo or their immediate followers. From a later period there are both Buddhist and Brahmanical bronze and copper figures which, even without the pieces already spoken of, would form a noteworthy group.

In stone there are two excellent examples of Indian indianial art, a Cambodian (Khmer) Head of Ruddhalesce p. 283), and a black basalt bas-relief of Durgs as Candi slaving the bull-demon Malusa (see p. 282).

Indian painting so far as it survives falls into several groups. The first of these, the Buddhist art of Ajanta (2d to 7th centuries, A. D.), is preserved only on the sulls of the excavated temples and at Sigiriya in Ceylon, and it rannot be represented in any museum, but something of the same type may be seen in the Chinese Tang "Hokke Mandara" (see p. 323). From that time up to the 15th century there is very little Indian painting preserved anywhere. The oldest known Indian paintings on paper are the illustrations of Jaina MSS, of the 15th century of which the Museum possesses a unique peries (see p. 284).

Rapput pointing is the Huntu art of Rapputana and the Panjah Himalayas of which surviving examples range from the 16th to the 16th century. This is a descendant of the old linear and national sclassic of mural art represented at Ajanta, but greatly modified in theme and scale. Its subjects are drawn from epicand contemporary vermicular poetry and Brahmanical

See Bulletin of the Museum, No. 90.

There is a full series of phistographs in the Photograph Department.

theology; but mind claracteristically perians from the cult of Radius and Krishna, where human love in all its places is interpreted as an image of the history of the soul of man (typified at Itailia and the other milkomids of an Indian Arendia) paymed by the divine lover (Krishna, the hendsman avatar of Vishnu), These themes afford the artist and poet, whose work is so closely related as to be hardly separable, with abundant material drawn from exentially Indian life - the home, the village, the corabeds, citual, riverside, and spring festivals; all which is interpreted in the sense of a spiritual drams (see p. 287). Perhans the most attractive example of this idelie art is a picture of Krislam disgussed as a milkmaid - one of the many devices he employs to effect his meetings with Radha, "making Himself as we are that we may be as He is." Even the smallest of the Rapput drawings are designed on the broad scale of nural art, almost devoid of modeling; while the netual relation to mural painting, which is the real foundation of Rajput act, is still more evident in the large cartoons of Radha and Kridina dancing A series of Illustrations of the Marriage of Nala and Damayant) exhibits the womberful charm of sweetness that pever becomes acutimental. Another favorite theme of Rajout art is the Ragmala or Garland of Musical Modes (the "Ragas and "Ragion"); the Museum possesses a number of toamples of the 10th century, one series of perlye examples unrivalled in draught-manchip and glowing culor and two others in more substitute times less hold in draughtemanship but not less exquisite feer p. 286). The Rajput schools are classified geographically as Rajusthuni (from Rajputana) and Pahari (from the Panjah Himalayas, where the chief centers of production have been in Jamura and Kangray.

Mughal painting Hornerly called Indo-Persian).
although unmistakably and definitely Indian derives

to some extent from Persian traditions. It forms a brilliant episode in the history of Indian art, though it diverges from Hindu sentiment masmuch as it is definitely and exclusively secular and realistic, interested in the study of individual character and the representation of contemporary events. In these respects it resembles the late Remainsance art of Europe, rather than any purely Asiatic art. It owes its existence entirely to the patronage of the Mughai emperors (the "Great Mogula") and especially Akhar (1556-1605) and Jahangir (1665-1628), both of whom gave lavish encouragement to court painters. It is celectic, and combines, Persian, Indian, European and even Chinese elements. Under Akhar it is still strongly influenced by the Persian school of Bilizad: it attains its most characteristic development and fullest strength under Jahangir-becoming overrise in the time of Shah Jahan and declining under Aurangaib. It differs from Persian painting (which was already decadent in the 17th century) in that it is, although still associated with calligraphy, for less definitely than Persian art an art of book illumination; it differs, too, in its greater actuality and its representation, no longer of spic themes, but of "what we have ourselves seen and heard." Many four examples are eximisted in the East Indian corridor. These of the Akbar period isclade two paintings representing the Birth of a Prince, a page from a Shah Nama, a scene from the Ramayana, and a part of an illustrated MS, of the Rasikapriya of Kesava Das, with the Hindi text. The collection is richest, however, in works of the school of Jahangir (see pp. 288-291), of which perhaps the most important is the Durbar of Akbar (see p. 288), with portraits of Akbar, Jahangir, his two grandsons and many of his courtiers, whose names, many well known, are recorded on the picture itself. This work, like many other Mughal paintings, represents a collaboration,

and is composed on the basis of many separate studies; the painters may have been Abul Haian and Raja Manohar Suigh, the date about 1670. The painter Bishnidas, highly praised by Jahangir, is represented in the embassy scene where Shah 'Abbas I of Persia is seen receiving a cup from Khan 'Alam, the Indian ambassador. The portrait of Malik 'Ambar (see p. 289) is powerful and dramatic. The poignant realism of a little drawing of a Dying Man is even more impressive than in the finished picture of the same subject new in the Bodleian. The collection also includes a number of works by the famous painter of annuals, Ustail Mansar (see p. 290), and a remarkable monochrome drawing of an elephant, unsigned.

The decorative arts are represented in the collections mainly by the jewelry and textiles, the former including fine examples of Jaipur council and of South Indian work in filigree and "gold-emissiding"; the latter an interesting series of printed cottons, gold brocades (see p. 293), and Kashmir shawls. There are also important examples of Indian rugs including the well known Maghal hunting carpet given by Mr Lethrop

Ames (see p. 202).

The collection is mainly the gift of Dr. Demman W. Ross. Many of the paintings, all the MSS, and nearly all the small broases are from the collection of Dr. Coomarnawamy given by Dr. Ross. Important examples of Indian jewelry from the Gardner-Brower Collection have been bequeathed by Mrs. Arthur Croft and others have been bequeathed by Hervey Edward Wetzel, and presented by Miss Louise M. Nathurst (see p. 291). Some of the paintings are from the Golombew collection, and the remainder of the series consists of other gifts, loans and purchases.

## CHINESE AND JAPANESE ART

O'rent is likely, when first templit face to face with the work of some Chinese or Japanese master, to find but little that appeals deeply to him. He will recognize, perhaps, a certain charm of line, color, or composition, little dreaming that what is before him may be a subtle exposition of comine philosophy wherein every detail is full of significance; for the art of the East delights rather in auggesting the inner spirit of things than in reproducing their more outward forms.

Even as the pictured antagonism between the tiger and the dragon represents the Taust conception of the eternal struggle between matter and spirit, or as the great circle, wherein sits the tamocable figure of Dai-Nicht, teaches the Buddhist doctrine of all-cautaining Oneness, so the simple mk sketch of a sprig of bamboo, by some Zen monk, implied the equal importance of least and greatest in the infinite rhythm of the Universe.

Again, so different from ours are the conventions of the Oriental artist that the "queerness" of everything at first overshadows all rise. Yet, if the beholder is not too young, he may remember how in the days before the development of instantaneous photography people laughed at the "impossible" artitudes assumed by the pictured steeds of Chira and Japan, while they themselves represented the galloping horse as poised above the ground, with legs stiffy stretched behind and before. A spirit of reflection once aromed, further comparisons will suggest themselves, and, as the first effect of strangeness begins to wear off, the impuirer will find himself discovering so many new terms of truth that before long be will wonder whether after all his own art is so immeasurably superior to that before him.

Every mode of art is the result of civilization inflaenced by the peculiar genius of a people. In the light of modern research it seems possible that the carliest high state of civilization and consequent act expression was developed among those nations living in the region east of what is now known as Asia Minor, whence the impulse spread in different directions to meet with special modes of refinement in Egypt, Greece, Mesopotamia, India, and China, from the latter of which countries it found its way to Korea and Japan.

During the early centuries of the Christian era there. was constant intercourse between India and China along the great carayan routes of Central Asia, and thus the teachings of Gantama found their way to China and puspired the philosophy of the latter country with the religious fervor of the former. From this combination was developed in the T'ang Dynasty (A.D. 618-907) on art equalling that of the early Italian Renaissance in its spirit of adoration, but one in which the maive rendering of a few subjects was replaced by the presentiment of philosophic conceptions whose least detail was full of symbolic meaning.

This was the golden age of Chinese art and literature culminating in the exquisite refinement of the Song Dynasty, A.D. 900-1280. The very splendor of Sang. however, proved fatal. The empidity of those same wild Mongol tribes, who were soon to trample the ancient glory of India beneath the hoofs of their shaggy steeds, became excited, and by the beginning of the thirteenth century Cham lay writhing beneath a conqueror's heel. Thenceforth, save for a temporary revival during the Native Ming Dynasty, 1368-1644, at which time and during the first part of the following Ching Dynasty the art of descending percelain reached perhaps its greatest perfection, the glory of China has

been to a large extent a glory of the past.

An agricultural people, living in a once highly fertile land, the Chinese have from time immemorial been subject to raids from the fierce nound tribes inhabiting the great steppes to the North. The conquerors generally settled down after their rictories, and gradually became assimilated to the manners and emions of their more civilized subjects only to be in their turn overwhelmed by a fresh musual from the North. The vicissitudes attendant on these invasions, together with the damage done by numerous great floods, have left but few examples of the early act of Chica, mostly bronze vessela and ceremonial jade implements, which, buried with the dead, have remained protected by the earth till dug up by some later generation. The early bronxes, some of them perhaps dating back two thoussand years before Christ, are generally of massive and dignified form, decorated in moubled relief with deagan monsters and conventional cloud, and other forms. Other vessels are themselves fashiourd in the forms of animals or birds (see plate, p. 337). The early jude and other stone objects which have come down to us are also nearly all of orremonal quality, many of the pieces reproducing the form of agricultural or warlike implements, as well as mystic emblems connected with the worship of nature (see plate, p. 260).

The grave pottery of the Han Dynasty (200 B. C. 221 A. D.) seems generally to follow in style bronze forms; its decoration becomes less conventional and abounds in hunting scenes among the mountains, etc. It is covered with a dark green glaze remoiscent of the patina induced on bronze by the action of copper

salts (see plate, p. 303).

From the fourth century A. D. forward Buddhism. which since about the beginning of the Christian era had been slowly filtering into China from the Indian frontier, became a living influence, and a new school of art was developed at the hands of these artists and artisons who followed in the steps of the Indian apostles to furnish and adorn the newly-exceted temples. Indian art, revelling in brilliant color and voluptuous lines, received later at the hands of the more restrained Chinese a dignite and impressiveness which it had hitherto lacked, and so evolved an ideal type comparable with, though differing from, that of Greece during her period of highest achievement (see plates, pp. 313 At this time communication between Persia and China over the great trade routes of the North became intinute, and much of Persian inflaence became apparent in Chinese decoration.

Every fresh impulse of Chinese thought or expression found its echo on the shores of Japan, there to receive the subtle refinement of native genius and to be preserved long after its memory had perished in the land of its light. Thus the earlier art history of both

countries may best be studied side by side.

Hoddhian first reached Japan at the beginning of the so-called Suko period, 550-700, and the sculpture of this era follows the style of contemporary Chinese Art, being of a decidedly Indian type modified by Chinese ideas. Soon, however, the innate Japanese love of beauty became disactivited with purely abstract representations and began to soften the rigidity of outline and to add a certain character of tenderness peculiar to the national consciousness.

The following Nara period, 700-800, witnessed in Japan, as in China, the production of a vast amount of sculpture, including the great scated bronze Buddha of Todaiji, fifty-four feet in height, in which the believers sought, according to the then prevalent trend

of thought throughout the Buddhist world, to embody an idea of the engrence unity of the common in robusal and calmly meditating representations of the "Blessed One."

The development of the idea of anism between spirit and matter led, during the Jogan period, 794-900, to the representation of different attributes of the all-producing Coolhead as separate enamations. Thus was created a pantheon of symbolical conceptions, which, by their nearest approach to human kind, gained in vigor while losing some of the ademnity of the earlier works.

In the Fojiwara period, 900-1100, Japan, having assimulated the teachings of the confinent, began to evolve an art and culture more nationally distinctive. With a return to ancient modes of thought, lischalling the idealization of womanhood, the gods became almost maternal, and, in their infinite merey and compassion. granted salvation to even the weakert. The paintings and sculpture of this period are characterized by great delicacy of line and color, accompanied by the lavish use of gold as representing the yellow light of Paradiss. Such conceptions, however, supped the virility of the court, with the result that the effenduate nobility left the enforcement of authority throughout the country to despised provincial governors. The governors, prototypes of the dainyouf a succeeding age, soon usurped all power, and through their matual jealousies and struggles almost brought about a condition of anarchy. Out of this turned arese the commanding figure of Minameto Yoritomo, who, nided by his chivalrons brother Yoshitsone, seized the chief power, under the title of Shogun, "great general," and in 1100 fixed his capital at Kamakura.

During the Tang (A. D. 618-907) and Sung (960-1280) Dynasties, Tankt and Sco-Confucian tendencies of thought had brought to the forc in China the Zen seet of Buddhism, which, discarding ritual, sought salvation through self-concentration and medi-This school endeavored to establish direct communion with the luner spirit of things, regardless of their external accessories, and deemed the least atom as could in importance to the greatest god in the cosmic unity, a conception which had a rust effect on contemporary art and gave birth to those simple hik sketches whose slightest stroke is replete with meaning. This was the great era of landscape painting, which no longer remained subsidiary to some figure or incident portraved, but become an end in itself and produced those delightful and poetic sketches in which the Sung masters, true impressionists, give us the echo of a distant temple bell or the soft hush that comes before the snow (see plates, pp. 331 and 332).

During the wars which in Japan ushered in the Kamakura epoch, 1190-1337, there was developed a spirit of individualism and hero-worship which, together with the introduction of Zen modes of thought and the establishment of a system of military femilalism, had a great effect upon contemporary art. This was the great age of portraiture both in analyture and painting, when even the gods assumed more individualized characteristics, and artists delighted in representing the stress of battle and the achievements of famous warrors and saints (see plates, pp. 34s and 335). To overawe the populace, we now first find paintings of the horrors of hell, executed with the same strength of delincation and vigorous spirit of action which

characterizes the other work of this period.

Owing to the steady growth of Zemian, with its subjective idealism and search after the nance spirit of things, the Ashikaga period, 1937-1582, is marked by the general elimination of color and detail from painting. The great Ashikaga masters, like Sesahu and his illustrious host of followers, in their enthusiasm for simplicity, preferred the natural bourties of a livel or a flower to those of subjects more overland by circumstance (see plate, p. 336). From now on painting truly becomes writing (the Japanese use the same word for the two arts), and a pictured scene becomes rather an essay or poem than a representation. The scarch for hidden beauty in all things coused even the greatest artists of this period experts to apply their genus to the design and decoration of the humblest household atensils. In carrying out the idea of hidden beauty, they aften convealed their finest work between a comparatively plain exterior, a practice which has to some

extent survived till the present day.

The feudal barons of the Ashikaga period were constantly warring one with another, each striving to obtain supreme control of the government. Out of this state of chors arose the figure of Toyotomi Hideyoshi, a nan of the humblest origin, who, by his Napoleonic genius, became in 1582 virtual ruler over a unified Japan. Like most partenns, he and his ennobled generals sought in their palaces for gorgeous effects, often replacing the saler refinement of the Ashikaga decoration by a wealth of gold and brilliant color. In conformance with the taste of his patrons, Eitoko and his army of pupils studied the models brought back by Huleyoshl's generals on their return from Koren, and upon their own native golden segrens enthusiastically produced gurgeous palace acroes after the fishion of the Ming Academy, bountiful of color and exuberant of spirit (see plate, p. 540).

Affected by the spirit of the times, Koetan (d. 1637) and his great followers, Sotatsu (middle seventomith century) and Korin (d. 1716), established the school commonly known as that of Korin. This school sought to combine the rich coloring of pre-Ashikaga days with the hold treatment of the Zenschool, and, anticipating the French impressionists by two centuries, depended

for its effects rather on broad masses of color than on line (see plate, p. 548).

After the death of Hideyoshi, Iyeyasu, the greatest of the damnies, founded the Tokugawa Shugamate, and through his Machiavellian skill in statecraft instituted a complicated system of control which enabled his descendants proceedable to retain the Shugamate

until the Restoration of Isus.

Under the encouragement of lycyasu and his immediate successors, Kano Tanya and his followers endeavored to return to the parity of the Ashikaga mosters, but with only partial success, for the spirit of the times was against them, and the new nobility and rising middle class demanded something more decorative and easily understood than the spiritual concepts of Zen philosophy. In response to this demand there arose a more democratic school, and Sauraka (1550–1636), gifted successor of Eitaka, Reho (1051–1724), and many another shilled painter employed their brushes in depicting popular festivals and other averyday incidents, thus preparing the way for the Ukiyosé, or school of common life.

After croturies, during which the various great feedal princes had been almost constantly at war with each other, came the long "Tokugawa pener" and the rise of the commons to positions of wealth and case. These people demanded an art which they could understand, and in response to their call many Kano and other artists began depicting the popular feativals and customs of the day with all the technical skill and tradition of their art heritage. In connection with this movement the art of printing in colors from weaden blocks was brought to a high state of perfection, but as later artists of the school, with a few notable exceptions, in accordance with the popular demand, turned their attention for the most part to the perivayal of popular actors and beauties of

the Yoshiwars, their work narrowed and finally came to an end amid the general upheaval attendant on the Restoration of 1868.

In the middle of the eighteenth century there arose in Kyoto a realistic school, which over its inspiration partly to the inception of a sumiar movement in China and partly to a direct study of European models. Under such masters as Okyo, 1733-1795, and Canku, 1749-1838, this actual produced many delicate and graceful compositions, which, however, sometimes lacked the conviction inherent in the works of the Ashikaga and Toyotom masters (see plate, p. 244).

Amid the turnool of the Restoration of 1868 and the anisequent indiscriminate enthusianin for everything Occidental, Japon for a while regarded her native art and its ideals as necessarily inferior to those of the countries whose scientific and mechanical triumples she so greatly admired. Gradually however, after a more intimate acquaintance with the West, the people of Japan are beginning to realize that in some respects their own ancient civilisation by no means suffers in comparison with that of Kurope and America, and many artists, adopting from foreign pastice such aids as seem to them desirable, are again seeking inspiration from the ideals of their own early masters.

## Scrapyone

The earliest examples of Chinese stone sculpture known to us date from the Han period, B. C. 206 A. D. 221. They are, for the most part, in the form of thickish alabs of gray limestone described on our side with chiselled drawings of semi-legendary seenes, and were used as sheathing for the small anti-vaults and name imposing pillars built to mark the graves of important people. Of these slabs the Museum possesses several specimens which may be attributed to the second contury of our era. The designs they bear are executed in broad outline, with so little suggestion of rehet modelling that they seem to be more nearly related to painting than to sculpture. They are, moreover, charseteristically Chinese - quite unaffected, spassently, either in motive or in technique, by the religious ideas and arts which had found their way from Buddhist India to Chins at least one hundred years before the date assumed for these slabs. Three centuries later. however, the influence of Buddhism was already widely disseminated among the Chinese, and was everywhere stimulating the production of monumental veninture in the round - a form of artistle expression for which the Chinese seem never before to have felt any great need.

In the Museum's namerous collection of Huddhist and Taoist sculpture this striking development of what was practically a new art in China may be adequately followed throughout the period of its greatest activity,—from the fifth to the north century,—special attention being merited by the scated figure of Maitreya and the standing figure of Padmaphat,—both of heroic size,—the wooder status of a Bodhisativa and

the smaller murble statue of a Bodhpattyn, - each one typical of an important phase in this brilliant evolution.

As examples of early Japanese sculpture there is a sather provincial but interestme wooden statue of Kwannon, probably of the early Tempro period (729-793), and a heroic standing Bodhisattva of the late Tempyo period, carved - with the exception of the arms, which are a later restoration - from a smale block of wood. This figure follows late Six Dynastics and early Tang bleals, but with a certain softening of line and nearer approach to humanity peculiar to all Japanese translations from the Chinese. Another very fine example of the work of this period is a little bronze statue of a Kwannon in which dignity and tenderness are wonderfully combined, while the follawing Joyan period (794-900) is represented by a number of specimens, among which is a classically Chinese wooden figure of Talshaku-ren (the gift of a member of the Department) once completely overlaid with a brilliant decoration of "mitsudano," a mixture of oil, pagment, and white lead, of which traces remain on the face, bands, and a few small portions of the robe.

Among the Fujiwara proces (200-1102) is a Daj-Roko of the tenth century, whose triple head shows wonderful modelling, and a large Amida, whose calin, dispustionate secenity well expresses the trend of religious thought at that period.

Among a number of Kamakura (1103-1302) pieces are two small figures of monks whose individuality stands forth strongly, and a dated (1822) Jizo, which well shows the closer approach, in this period of individualism and hero worship, of divine types toward those of humanity.

In the Ashikaga (1803-1573) and Tokugawa (1003-1868) periods representations of the gods became highly formalized, while the development of the

No-drams, in which ancient heroes and acmismythical

characters related their philosophic and temporal adventures, called forth a school of mask carvers, perhaps the greatest ever known in the world's history, of whose work the Mannam possesses some fine F. G. C. specimens.

## PAINTING

The oldest and one of the most beautiful and interesting pieces in the collection is a blocke Mandara, representing the Buddha scated upon the "Eagle Peak" in the mulat of an attendant concourse of Bodhisattva and Bakan, to whom he expounds the Mahayana principle. Although much of the background and lower part of the picture has been destroyed, one finds in the isgure of the "Blessed One" and his attendants the isgure of the "Blessed One" and his attendants the isgure of the "Blessed One" and exquisite feeling for line which mark our famous marble torse of Kwammo, but in this case with the added glory of that color which the latter has last, while a close study of the background yields us considerable insight to a feature of T'ang painting hitherto little known.

The celebrated album of Yuan Yuan, a scholar and expert of the eighteenth century, which has recently come into our passession, contains a number of little Tang and Sung paintings of exquisite quality, while in the roll of the Emperor Hin Tsung we have a wonderfully preserved example of the delicate drawing and fascinating color of a great artist following, according to tradition, the work of a Tang master. Besides the ten paintings of the Daitokuji Rakan set we have a complete set of sixteen Rakam by Lo Hsin-cluing (Rikushinchu), with the artist's agnature in small characters upon the trunk of a pine tree in one of them.

Among the Sino and Nepali-Tibetan paintings we have, one of them a Shaka, five pieces from a very fine and rare Yuan set of Rakans, taken from the Lamasery of the summer palace at its sacking in 1800, while of the Ming Academicians we have a number of notable examples, including a long roll "Spring Festival," attributed to Ch'in Ying, a fine mountain landscape by Lan Ying, and a deliciously delicate "Harp Player in a Pavilion" by Ch'in Ying.

The eight Fujlwara Baddhist paintings in the Japanese Collection are all of high quality, especially, perhaps, the great tenth century Bishamon Mandara, with its wonderful sweep of line and color, sirely the original composition of a great master, while among the one hundred and thirty-three Buddhist paintings of the Kamakura period it would be strange indeed if there were not some of the highest order, fall of the vigor and stern individualism of that warlike era. Of the Kamakura Romantic school we have a fragment from the fumous Jigoku Zostu or Heil scenes and one of the three fumous Jigoku Zostu or Heil scenes and one of the three fumous Jigoku Zostu or Heil scenes and one of the three fumous rolls, furnierly attributed to Samiyoshi Keinu, which hold first rank among the battle pictures of Japan.

Among the one hundred and eleven Ashikaga Buddhist paintings are many rich pieces, but the greatest talent of the day followed the triumphant march of Zen thought, and expressed itself usostly in the strong black and white impressionism of Seashn and his noble following. Among the eighty-eight acreens and paintings of this era in the Masseum may be mentioned a Josetsu landscape from the Kobori Englin Collection, a pair of monkey and bird acreens painted by Seashu at the age of seventy-two years, and a pair of monkey screens formerly attributed to Season, but now proved to be part of the same set of which the Miyoshingi Temple possesses two examples mounted as kakemono and known to be the work of Toliaku.

Of the Post Ashikaga Idealistic and rarly Kano schools we have fine specimens of nearly all the great masters, together with several sub-odid pairs of golden flower sevens by Sotatau, the far-famed "wave severa" of Korin, and other smaller paintings by these artists and their followers. The long "Tokugawa Peace," 1603-1868, witnessed a period of luxury staring which the Kano Academy, the latter Tosa school, Kyoto Naturalists, the new Ukiyo-6 school, and others, vied

with each other in the quality and quantity of their artistic output, fine specimens of which, by the best masters of the day, may be freely found among the

mans places in the Museum.

Owing to the great size of the collection, even with greatly added facilities for exhibition, the Department will never be able to put before the public at any one time more than a very small proportion of its treasures; it will, however, be always ready to receive visitors at its executive office, and to show them, under such regulations as are necessary, any further paintings which they may device to see.

## JAPANESE PHINTS

In Japan engraved wood-blocks were employed for the purpose of multiplying Buddhist images in outline as early as \$41, the art having been introduced from China at a somewhat earlier date, 1 The first known Japanese printed picture of a secular subject may be assigned to the twelfth century, though in this instance the printing was only intended as a guide for the further application of ink and color. It is, however, ant until about 1000" that prints illustrative of popular themes began to be produced in single sheets as linexpensive autistitutes for paintings of the genre school, which by this date had become firmly and undependently established under the name of the Ukiyo-4, or "Pictures of the Fleeting World." The development of this school, which in the West is best represented by the prints, has covered nearly three hundred years, and may be divided into (1) the period during which artists of repute devoted themselves to painting popular subjects under the patromage of the powerful and the wealthy; (2) the period when prints gradually made their appearance as substitutes for the contemporary geore paintings which had become more plebelan in motive and in quality; (3) the period beginning with the full development of wood block printing and ending with its complete degeneration, during which the artists of the Ukiyo-è, entering to the mauses, designed almost exclusively for prints.

These prints, produced, generally speaking, by commercial houses to supply the demands of popular taste, naturally treated of themes which were popularly

<sup>&#</sup>x27;The records show that Buildin's scriptures were printed from wood-blocks in China as long ago as 593, and in Japan in 150.

<sup>&</sup>quot;The first publication of wood-block prints in single sheets depicting current events may with carinlary be assigned to the early seventsenth century.

appreciated — familiar plays, celebrated actors, famous courtesaus, noted scenery, current events, etc.,—in fact, almost every phase of nature and of the picturesque life amid which the common people moved.

The technical development of the Japanese colorprint may be roughly traced through the following stages: Samirari (prints solely in black and white), Tan-4 (prints to which has or red oxide of lead also was applied by hand, occasionally supplemented by yellow, green, or brown), Urnshi-4 (hand-colored prints solding red, yellow, and blue, with frequent use of brass flakes, their chief characteristic being masses of lastroin black produced by the use of a thick pigment overlaid with a coating of glue, and resembling the black lacquer or urashi surface), Bess-4 (prints employing bess, or rouge, and green printed from wood-blocks), and Vishih-4 (polychromatic wood-block prints).

To appreciate Japanese prints one must bear in mind that they were produced through the combined efforts of three imividuals,—the designer, the wood-block carver, and the printer,—all of whom worked more or

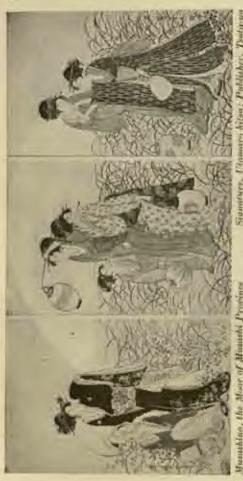

less under the control of the publishers.

The Museum possesses a large and comprehensive collection of Japanese prints principally from the Bigelow Collection, greatly augmented by the Ross Collection; and though only a small portion is shown in the galleries at one time, the remainder is accessible to students in the Department Study, where literature on the subject, including contemporary illustrated books, may be consulted.

## THE MINIS ARTS

In China and Japan, as claewhere, the miner and applied arts echo the aims and ideals expressed in sculpture and painting, and quite as definitely show their derivation and inter-relation. Thus the surface of a sword guard may remind us of the Zen tenet that the least atom is of counic importance, and the carving of a netsake emphasize the debt—honorably acknowledged and nobly acquitted—which the Japanese over to the older life of China.

The oldest remains of Chinese civilization which we know are brouzes and jades. They are vessels, coins, and implements of various kinds, which have leated partly because of the durable material of which they are made, partly because since prehistoric times the Chinese have regarded them as previous. The Museum collection of brouses carries as very far back into the life of the Chinese, and illustrates the beauty of the forms and designs which the Chinese so loved that they echoed and re-echoed them through succeeding ages of development. Together with such jades as the Museum possesses,—ceremonal implements, imagina of rank, precious objects for intimate use,—they indicate a great and established richness of life in ancient China.

Bronze and pottery seem to be the only productions of the minor arts in Korea that are worth while, and in both kinds the derivation seems distinctly traccable to China. Only in pottery did the Koreans apparently do anything remarkably distinctive; they produced a gray green ware and a green-toned white, which show a high appreciation for a certain delicate branty.

Of the minor arts of Japan wood and ivory carving, sword smithing, metal working, larquering, and pottery making were developed to a high degree. In all of these the Japanese have excelled, though in no other directions have they gone so far in a way of their own as in the making of swords and sword furniture and in the use and adaptation of lacques. The prescriptions of the feudal system, the gradual formalizing of social customs, the deliberate withdrawal form all distracting alter influences fostered such a development, with the result that the artists in metal and lacquer grew into an understanding of their media and a power of handling them within prescribed limits that produced works of surpassing quality.

## CHINESE POTTERS

Pottery may be identified as having a more or less porous body, opaque, and varying from soft friability to the hardness of porcelain. In China, as in many other countries, it was made before the dawn of history. The practice of glazing it, and thus rendering it impervious to water, dates in China as far lack, probably, as the second century B. C. So far as we know, the first glaze used by Chinese potters was thin and green, and the clay invested with this glaze was generally reddish in color. During the following twelve centuries Chinese potters gradually refined the clay and

invented new glazes, white, blue, and green, in various tones, black, and celadon, until, in the Sung Dynasty, their wares reached great incress and beauty of form and glaze.

From a time long before the use of glaze Chinese pottery has been decorated with designs modelled in low relief or incised in the clay. In the Sang Dynasty the potters began to use over-glaze decoration; but so far as extant examples may serve to guide us, the beauty of Chinese pottery remained, through this and the two succeeding dynasties, in the form, in the incised or nodelled decoration, and in the glaze.

## CRINESE PORCELAIN

Porcelain - the hard, translucent, thoroughly varified ware was first made in China. For centuries its patterms and colors influenced the pottery of both Europe and Western Asia, but not until the eighteenth century was il successfully imitated in Europe. It is said that the first porcelain was produced in the effort of the potters to imitate the appearance of jade, which is so greatly admired by the Chinese. Many literary references testify to the beauty of the early porcelain, but few if any existing specimens go back Jurther than the Ming Dynasty, 1568-1644. The lilitary of Chancse powelain is the history of the Imperial factory at Ching-te-chen, reimilt in 1364 by the founder of the Ming Dynasty. He period of greatest splendor was within the reign of the Emperor K'ang Hsi, 1662-1722, when the earlier porcelain glazes and designs were reproduced and new ones invented. The brilliant colors and bold decoration of this period were refined and weakened within the following century, and in part supplanted by a naturalistic floral decoration with earefully finished details in over-glaze pigment and enamels. Since the eighteenth century the art of porcelain-making has lost its high distinction. F. S. K.

THE MORSE COLLECTION OF JAPANESE POTTERY

ARIOUS periods are recognized in the development of pottery in Japan. The prehistoric pottery exhamed in various parts of the empire is found in the shell heaps scattered along the shores from Yezo in the north to Higo in the extreme south. The pottery is usually in fragments, entire vessels being rure. It is hand-made, decoration either cord marked or incised with curious variations in form in different localities. As the Ainu occupied the entire land before the Japanese, it was maturally supposed that this early pottery was made by the Ainu, though there is no historic evidence that the Ainu ever made pottery. An art of this kind once acquired is never lost by a savage people. (Examples of this prehistoric pottery may be found on the two lower shelves in Case II.)

Next comes the early historic pottery, lathe-turned, unglazed and identical in form and purpose with Korean pottery of the same period. This pottery consists of mortuary vessels and is found in dolineus and mounds. It has an

age of from twelve to lifteen hundred years.

The first definite history of the potter's art in Japan begins with the work of Toshim in Seto in the thirteenth century, though tragments of green-glazed pottery have been dug up in Omi to which a famous expert ascribed an age of nine hundred years. In the ancient storehouse at Nara a soft green-glazed pottery is preserved which is known to be a thousand years old. This, however, is probably Chinese.

The formal ceremonies associated with the drinking of powdered to exerted a lasting influence on the potter's art and gave it that reserve and simplicity which is so char-

arteristic of Japanese pattery.

The collection of Jupanese Pottery is exhibited in the room at the left of the entrance to the Museum. Each case is numbered to facilitate reference to the plate in the

catalogue where the objects are described. The table with the catalogue may be rolled from case to case for purposes of study. In this collection is brought together the work of nearly every potter in Japan up to within thirty years, and the objects are arranged by provinces.

If one will recall the pottery of the Baltic provinces be will remember that little or no distinction is seen in the work. each potter copying the forms and rule decorations of the others. The Black Forest potters, covering a wide area. again show nothing distinctive in their work. In Japan, on the contrary, a local pride prompted the potter, the lacquerer, and other artisans to produce something original either in form or decoration, so that the provinces are disfinctive, and the names of the provinces are often used in a generic way in designating the pottery, such as Satsuma, Bisen, Laumo, Kaga, Awaji, etc. After the provinces were brought together under a strong central povernment in 1868, provincial feeling still survived, and each province prided itself on special products, such as pottery, lacquer, testile fabrica, and the like. The strongly marked differencis, between the dominant pottery of certain provinces may be seen by comparing the following cases: Higen, 3, 4; Bizen, 5; Higo, 8; Nagato, 10; and many others.

The Japanese potter derived certain methods of technique from the Koreans, and for this reason a small collection of Korean potters has been brought together in Case I. The objects range in age from a thousand years and over to the present time. In Case 2 is a collection of early historic and prehistoric pottery of Japan.

The casual visitor may enjoy the collection by simply noticing the remarkable qualities of glaze, the curious

motives of design, the variety of form, and, above all, the reserve and sobriety shown in the decorative treatment.

For sources of information, the work of annateue posters, motives of decoration. Korean influences, uses of objects and other details, reference must be made to the illustrated catalogue of the collection published in 1901.

Primilicates the office of the Department

Paysage, Herr Etching by Charles Jacque, 1823-28-4

The resources of the collection of prints are difficult to illustrate, since half-tone reproductions, while presenting an apparent facsimile, fail to render the subtler qualities which constitute the charm and the value of prints. The illustrations are given merely to suggest a few of the numer-

ous apheres of interest available.

The collection was begun in 1872 by the gift of one print. To-day it holds a leading place among print collections in this country. The volume of material accessary to the usefulness of a collection of this kind forms an obstacle to its winning wate popular Javor. Only a small fraction of the eighty thousand prints (approximately) which form the collection can be shown at any one time in the exhibition rooms. The visitor to the galleries to not aware of the great mass of material in the Print Rooms, ready to provide pleasure and information.

A few words concerning the range of the collection will not be amiss. If one desires to have back to early days of engraving, there is virile Mantegou sketching on copper his strong figures, instinct with dignified grandour. Earlier yet are the great series of Sibyls and Prophets and the famous Tarocchi, while the polismith's niello impressions offer some early experiments in printing from metal plates. The Museum is fortunate in pressuang a number of these early prints. Turning to northern art, one visitor may

prefer the spring-like parity of Schongauer's engravings, or he may respond to the power of Durer's expressive, foreible conceptions. The vigorous message of early German woodcuts may afford pleasure to some, while others will prefer the bold, broad treatment of Italian chiamseuro, suggesting by graded times the varied effects of the printer's work. Raphael's genius may be appronched through the medium of his faithful engraver. Marcantonio. The realism of seventeenth century art in the Netherlands offers an immense field in etching Besides the Flemish engravings of Bolswert, Pontins, and others of the Rubens school, there are the portraits in Van Dyck's famous "Iconography," there are Cornel Visicher's forceful likenesses and Delff's plates, the Dutch persont seenes of Ostade, the cattle pieces of Paul Potter, de Lacr, Berghem, Dujardin, the landscapes of Ruysdael and Waterloo; and, above all, the masterly plates of Rembrandt, whose wonderful, versatile genins cannot fail to awaken a deepening interest. A large collection of Rembrandt's drawings in excellent reproduction helps to bring out the unique powers of the great Dutch master. In France portrait engraving reaches its highest perfection with Morin, Nanteuil, Edelinck, and the Drevet. From these beautiful plates one may turn with interest to the Enghish school of mezzotiat engravers, to the portrait work of Green, McArdell, Smith, Ward, Watson, Reynolds, to the plates of Earlom or the stipples of Bartologzi. Constable's realistic landscapes are interpreted by the mezzotiats of Lucas, Again a different mood will be met by Canaletto's breezy Italian landscape etchings.

An unfailing source of delight is always open to the amateur of landscape art in the wonderful plates of Turner's Liber Studiorum, England and Wales, and other series. The beauty of the French metropolis inspires Meryon's series of Paris etchings, and Whistler in his Thames set has recorded the poetry of a traffic-balen river. Then there are Haden and Lalanne, Klinger and

Buhot, Cornt, and Millet; there are Gaillard's exquinte portraits as well as the lithographs of Delacroix, Raffet, Dannier, Gavarui, Isabey, Dupré, and Bonington.

The collection of American prints, though rather deficient in examples of early work, offers abundant material for the study of the nineteenth century.

The Print Department is also the repository for the collection of drawings (pp. 268-372).

Madonna nad Child Engraving by Andrea Mantegna, 1681-1806

The Assumption of the Virgin Florentine Engraving after Bottleelli

Early Italian engravings reflect the glory and perfection of Remassance Art. Although technically inferior to contemporational German work, they are the fruits of a better tradition in art, and treat a wider range of subjects. The angravers of Northern Italy were dominated by the severe grandeur of Mantegus, while the Florentines show the influence of Finigueers and Botticelli.

Saint Jerome in 1the Cell Empraving by Albrecht Dürer, 1271-1848

Dürer is the greatest painter-engraver of the sixteenth century. His art, largely allusive, filled with thought, demands thought on the part of the beholder. Although able to express beauty, he generally sets it made for expressiveness, action, power. Standing on the threshold of modern times, Dürer links the dark ages with our own. Obscure though his art may be at times, it always proves stimulating.

Front Supilors (First State)
Bicking by Van Dyck, 1550-1651

For parity of style Van Dyck's postrait etchings are anrivalled. They were done in so fresh and personal a manner as to be unappreciated by his contemporaries, so that in many cases formal backgrounds and accessories were added with the burin by professional engineers. The Museum collection contains the majority of his portraits, in early states, before this additional work.

Hind Tolds Etching by Bambrandt, 2606-1669

Amidst the vast number of famous Dutch artists stands the mighty personality of Rembeandt. Be his medium the brash, the pen, or the etching needle, he infuses into his art the vital, compelling force of the thought which animates him. He masters the secrets of nature by incressant study and keen observation. One of many examples of his powers is this groping figure of Tobit.

Pertrait of Pompose de Bellièree Empressay by Robert Nucleail, 1823 (1)-1978

French engraving is seen to best advantage in the work of seventeenth-century engravers. Among them none quite equals the excellence of Robert Nanteuil. In his plates the last word of technical perfection is spoken, yet the engraver's refined taste keeps technique subservient to the message of his act.

Mary, Duches of Associate
Marnetine Kayenering by James Watson, 27 to 2770 (1)
After See Judius Republis

Mexicitis was introduced into England shortly after its occurring. Little used at first, it came into general favor in the eighteenth century. Its delicate blendings and rich, soft shadows made it the ideal medium for rendering the works of the great English portrait painters.

Regus Castle Mountain Engraving by J. M. W. Turner, 1775-1851

Turner will always stand in the forefront among landscupe engravers. His broad outlook upon nature is happily wedded to an intimate knowledge of the world, born of incessant keen observation. In hundreds of guisterly compositions he speaks to us of nature with irresistible cloquence. The "Liber Studiorum" reveals his command of the graphic arts. Several plates of this aplendid series. the one shown above for example, are his own throughout. When he left the mezzotinting to others, he usually etched the outline hunself, provided a wash-drawing to guide the engraver, and closely watched the progress of the plate. He carries us to the quiet dreamy seashore in the glomaing, or to the storm-swept cliffs of the Yorkshire coast. We watch with him the lowering skies over Hind Head Hill and the thundereland on Ben Arthur. We see the vine-clad plains of southern France and the glaciers and peaks of Switzerland, only to return to the woodland seemes of the Aesacus or the Jason, and to the stlent peace of lovely Raglan Castle.

Cotton Mather Pater Patham, 1634 VI-1751

The soil of New England was not hoopitable to the fine arts in early that a ; only portraiture was viewed without disapproval. At a time-when Hoglish mezzotint developed its rich resources in portrait work, an English engraver of merit. Peter Pelhans, came to ter his fortunes in this country. We owe to him a number of portraits, chiefly clergymen, among them the above portmit of Mather. revolutionary period hourts of Charles Willson Peale, by for the most gifted of early American engravers. After the Revolution came David Edwin, A. B. Durand, John Sartain, John Chency, and later Charles Burt and William E. Marshall. During the latter part of the ameteenth century wood engraving, as exemplified by W. J. Linton, Frederick Jurnyling, J. H. E. Whitney, Gustav Kruell, Timothy Cole and Henry Wolf, achieved a character more original and pronounced and more nearly national than any other branch of art practiced in America, and etching tlourshed for a brief period, All these changing phases may be followed in the Museum collection.

Creation of Fire Colored Decreing by William Blake, 1757-1877

William Blake was a mystic, living among visions which he attempted to interpret in his art. His powerful conseptions with their exquisite coloring and their peculiarities of form carry one away from the realities

Admin and fire and the Asyit England Calored Drawing by William Blake, 1757-1857

of life. Eve takes shape at the Creator's bidding, amid quiet, low shadings of gray and green. Again a nacrossa glow of colors pervades the scated figure of Raphael. The Museum owns a number of these masterly drawings.

The Olimbers Drawing by J. F. Millet, 1814-1875

The life and toil of the peasant forms the dominant theme of Miller's art. His genius for terse expressiveness is revealed in a score of sketches in the collection.

Present with a Wheelberrow Drawing by J. F. Millet, 1814-1875

Close observation of the interplay of muscular effort and the force of gravitation is evident in this drawing, which is a preparation for the etching of the same subject. Besides the Blake drawings and the sketches of Millet, the Museum owns a number of drawings in charcoal by William Morris Hant, and a miscellaneous assemblage of sketches by various artists, among them some examples of the art of Tiepolo. This small collection of original drawings is supplemented by numbers of excellent reproductions of the musterly drawings of Rembrandt, Dürer, and other funous artists, found in the great collections of Europe. Reproductions of Menzel's works and colored reproductions of sketches by Degas and Remonard are frequently consulted by visitors.

Wassen Feeding Her Child Demoins by J. F. Millet, 2814-2873

# LIBRARY

AND

COLLECTION OF PHOTOGRAPHS

# LIBRARY

Not until 1879, three years after the opening of the Museum in Copley Square, was a room equipped to serve the specific purposes of the Library, but the establishment of a special Library was mentioned in the statement of the objects of the Museum issued by the Trustees upon their incorporation in 1870, and the contribution of one thousand dollars offered in 1875 for the purchase of books was the earliest gift of money to the Museum for any other than its general purposes.

The Library new possesses approximately fifty thousand books and pamphlets, including twenty thousand volumes in Chinese and Japanese. It aims to possess the most authoritative information on fine and on applied art, and to serve any individual working in those fields. The collection beliefes museum estalogues, catalogues of private collections, biographics of artists, incongraphs on different branches of art, and large and expensive volumes of reproductions. The Library also subscribes to the leading periodicals of art.

The collection of photographs is an important adjunct of the Library. It was started with ten robuses of "Roman photographs" given by George B. Emerson; these are recorded in the first annual report (1873) of the Committee on the Misseum. The collection now contains about fifty thousand photographs, representing the art of all times and countries.

The public is not allowed to take books from the Library, but teachers are permitted to borrow photographs for purposes of instruction on condition that they be returned within forty-eight hours.

The Library is open to any visitor to the Museum. The Librarian, or an assistant, is constantly present to

give information to resilers.

# COLLECTIONS OF CASTS

GHERR AND ROMAN SCHLPTURE

RIGINAL works of Greek sculpture in America are so lew and often so fragmentary that the student of classical art must supplement his study of actual examples by the use of photographs and custs. As mechanical reproductions in the original size, custs give the composition, the proportions, and what has been called the dramatic character of Greek sculpture, and enable the student to learn something even of the technical procedure of the artist. In looking at them, however, it must be remembered that the final perfection of style in the work of great masters cannot be reproduced in phater. The effect of this material in color. quality of surface, and response to light and shadow is very different from that of the original marble or bronze, The impression that the casts produce should be constantly corrected by reference to the collection of original ancient acalphores in the classical galleries.

The large court to the right of the central stairway is devoted chiefly to Greek sculpture of the archaic period and of the fifth and fourth centuries B. C. Near the entrance of this room are reproductions of works of early date illustrating the steady progress by which the art outgrew its primitive helplessness and, through direct study of nature and increasing mastery of materials and tools, prepared the way for the cun-

summate achievement of the fifth century.

At this end of the room are also a few casts of sculptures of the so-called period of transition between archaic art and the free creation of the art of Pheidian. To this period belong some of the works of which casts are exhibited on the walls of the court: the west pedimental group from the Temple of Aphaia in Aegina and some of the pedimental figures and metopes from the Temple of Zeus at Olympia. The sculpture of this time has a freeliness and sincerity which more than atome for the

limitations in its scope of representation.

The athletic ideal of the fifth century B. C. is embodied in the work of Myron, the sculptor of the famous Discubolos, and of Polycleitus of Argos, who attempted to establish a normal standard of proportions for the human figure. Casts representing the work of these artists are shown in the west end of the court.

The mingled elements of Athenian civilization found their plastic expression in the style of Pheidias. At the west end of the court are casts from a few statues of his school, while on the long pedestals at the sides of the rooms are reproductions of the pedimental groups of the Parthenon. Parts of the Parthenon frieze and a few of the metopes are arranged on the walls. The decoration of this temple was probably directed by Pheidias. It reflects the noblest civic and religious ideals of Greece.

The graceful motives and the refined technique of Praxiteles are shown in easts from works attributed to him and to his school. These are grouped at the southeast corner are reproductions of statues attributed to Scopus, one of the most vigorous and original of the sculptors of the fourth century B. C. The last great sculptor of the athletic figure in Greece was Lysippus of Sicyon, whose celebrated Apoxyomenos is known to us through a Roman copy, of which a cast is exhibited here.

Because of their large size, casts of two important examples of late Greek sculpture are exhibited in the court: the Victory of Samothrace and a part of the frieze of the great altar at Pergamon. In front of the latter is placed a selection of the dramatic sculptures of the carlier Pergamene School.

A door on the south wall of the court leads into a

corridor on one of whose walls are casts from the frieze of the Temple of Apollo, near Plugaleia in Arcadia.

In the circular hall under the retunds are easts from works of the Hellenistic and Ruman periods, including the Aphrodite of Melos and the Laccoon group. A model of the Athenian Acropolis and of a corner of the Parthenon are also shown here.

Norr.—For detailed information regarding the classical costs, the visitor is referred to the Colabogus of Guits of Greed and Roman Sculpture (Edward Religious) describing the collection as installed in the old building. Students of classical archaeology may obtain permission to examine in the besement storerooms many casts a light are not shown in the galleries.

### SCULPTURE OF THE IVALIAN RENAISSANCE

In the collection of easts from sculpture of the Italian Remaissance, the chief sculptors of that period are all represented, some of them by their most famous works. The two figures of homemen - the smaller, of Gattamelata, by Donatello (1452), and the larger, of Colleon, by Verrocchio (1490) - are regarded as the foremost equestrian statues of the world. Niccols Pisano's octagonal pulpit in Signa Cathedral was commissioned in the year of Dante's birth (1205), and for the first time embodied the imagery of the Catholic faith in forms of classical purity and beauty. Jacopodella Quercia, the most noted of the sixthetors of Siena. is represented by the recumbent effigy of Haria del-Carretto (d. 1405). The emphatic composition of this figure and the poetical impressiveness of the marble effigy by a living artist across the room exemplify two widely different conceptions of the art of sculpture. The great portal on the south wall reproduces the eastern doors of the Baptistery at Florence (1452), by Lorenzo Ghiberti - fit to be the gates of Paradise, as Michel Angelo said. Ten typical scenes from Old Testament lattery fill the ten panels, and the heads and statuettes that surround them and the garland that frames them are no less interesting as scalpture. Of Donatello, the sculptor of greatest power in Italy before Michal Angelo, the collection contains, beside the Gathinelata and reliefs, two well-known staturathe St. George (1410), a young man-at-arms impatient for the battle, and the David (1430), the earliest nude statue of modern times. On the north wall are placed reproductions of the famous reliefs of Singing and Dancing Youths, carved by Luca della Robbia in 1437

for the organ loft of Florence Cathedral, and now preserved in the Cothedral Museum. Reproductions of tien luncties in glazed term-rolla by his nephew, Andrea della Robbia, hung above, one imaging the meeting of St. Francis and St. Doname, the other the Annunciation of the Virgin. The collection includes a number of reliefs, busts, and statues from the memorable group of sculptors who were the contemporaries of the Robbia in Florence: Mine da Fiende, Desiderio da Settignano, Verrocchio, Rossellino, and others. The reproductions of Michel Angelo's works melade three of his greatest achievements; the statue of Moses from the tomb of Julius II (ordered 1505), and the figures of the Dukes Lorenzo and Ginhano de' Medica. and of Night, Day, Evening, and Dawn from the tumbs of the Dukes (1581-1584) in the Medici Clanel.

Nort. — For further information in regard to the sculptures which this collection of each reproduces, the axistor a referred to the Massaci of Italian Resonances Sculpture (Renjamin Iven Gilman), published by the Museum.

# MUSEUM OF FINE ARTS, BOSTON

Incomponanted Femalests 4, 1870

THE Museum is a permanent public exhibition of original works of the art of Egypt, Greece, Rome, the Orant, and modern Europe and America, supplemented by reproductions of others. It is supported wholly by private gifts and namaged by a Board of Trusters including representatives of Harvard University, the Boston Albertseum, the Massichusetts Institute of Technology, the City and the State, acting through a numerous staff and with the cooperation of resiting and advisory committees of citizens. Visitors, about 350,000 annually.

A public muceum of art offers the whole people an unfailing source of delight and improvement. The preservation, surichment, and interpretation of museum collections demand liberal financial support. They must be shown under secure and honorable conditions. Unless by gift, they can be increased only through the expenditure of large sums in purchase or exploration. Their care and exposition demand a staff of specialists in the measure of its power of a be untily a museum can both widen and deepen its beneficent influence.

The legal title is "Museum of Fine Arts." Names of givers are permanently attached to objects purchased with their gifts-

# THE MUSEUM AND ITS HISTORY

# COPYING AND PHOTOGRAPHING

Application to copy or photograph any object in the Museum should be made at the Director's office. Essels and space to keep materials are provided for stiniouts.

# EDUCATIONAL OPPORTUNITIES

For information consecuting the following amount counts apply to the supervision of followithment Work at the Minarum

#### I. DOCENT SERVICE WEEK DAYS

Free in all. Respecte for guidance should be much on infrance,

The officers of the Museum have united in offering to set as Decreta, or companions to visitors in the galleries, as far as their other work will permit. Applicants will receive cards giving the day and hour of the appointment, and entitling the holders to the attendance of the affect named on the card within his department for one liour from the time stated. The number of persons in one party is limited to twenty-five.

By applying in advance teachers and others who are interested in visiting the Museum may arrange to have a Docum most groups or classes in the Museum; pupils may be sent without a teacher, in groups of from ion to twenty, and a Docum will meet them by apparational.

## 2. SUNDAY DOCENT SERVICE

# Free to 421

From the beginning of October to the end of May two speakers most visitors in the galleries of the Museum on each Sanday afternoon. Informal talks are given either to audiences scated before objects in the collections or to groups moving from gallery to gallery; occasionally the lecture half is used. The manes of the speakers and the subjects of the talks are automated in the newspapers and in special notices sout upon request to concational and other institutions.

Those who give their time thus to making the subsctions of

greater interest to the visitors are friends of the Museum, and the public and the Museum are greatly indebted to them for their willing efforts to impart to others the indexest which they feel in the collections.

#### 8. WEDNESDAY CONFERENCES

Allminion by Card Presumaly Obsained

Informal talks in the galleres on objects shown at the time are given each winter by officers of the Museum. The conferences are announced in the Museum Bulletin in the daily papers, and by leaflets posted and distributed at the entrance of the building. Adminsion is free by eard, which will be sent when application is made accompanied by a stamped and addressed envelope. Applications will be filled in the order received, and tickets (to the capacity of the gallety) for each series of conferences will be sent two areas before the series begins.

# L UNIVERSITY EXTENSION COURSES

Adminion by Fix

The Museum cooperates with the colleges and universities of Boston and neighborhood in the instruction offered by the Commission on Extension Courses. This instruction corresponds as nearly as practicable to that offered in the carriculum of the institutions cooperating.

Lectures are given in the Museum by the members of the Staff and the galleries and classrooms are offered for work in connection with courses relating to its exhibits. Information regarding hours, fees, and entrance requirements may be obtained by writing to the Commission on Extension Courses, University Hall, Cambridge, or to the Supervisor of Educational Work in the Museum.

# 5. LECTURES

From time to time the Museum invites distinguished men to deliver becures on anticets connected with the Fire ArtaAdmission is by invitation. Other lectures are given in connection with the courses offered by the School of the Museum. For these a fixed fee is charged; the topics and bours may be had an application.

The Museum also offers to the educational institutions of Greater Boston an illustrated becare on the Treasures of the Museum, to be given without charge in the lecture hall of the institution asking for it; the lantern and operator to be amplied without cost to the Museum.

Stories for children are officed in the Museum on Saturday afternoons in the autumn, and again in the winter months. Admission is free and children need not be accompanied by adults. For two months in the aummer there is a daily story hour for children.

## 6. MISCELLANEOUS EDUCATIONAL ACTIVITIES

The Museum furnishes upon application printed lists of objects to be found in the collections which will aid the teacher of history, languages, geography, etc., to illustrate his subject. Series of haif-tone reproductions of paintings, statues, and the minor arts are published for use in the schools in connection with the teaching of history, drawing, design, etc. The Museum gladly lends, under simple restrictions, its lautern slides (about \$1000), photographs (about 40,000), and duplicate textiles and prints.

# 7. PRIVATE INSTRUCTION AT THE MUSEUM

The use of the Museum classrooms and bettere halfs is open to any persons or organizations absoring to illustrate single loctures or courses of instruction by the collections. Credentials natiofactory to the Supervisor of Educational Work must be formulated by those desiring to give such courses, and the form of any public amountement must also be approved.

The use of the room is free. If the lantern is used an operator is furnished and a charge of \$2.00 for each occasion is made. The Museum assumes no responsibility for this metraction.

The offer of this privilege continues a policy inaugurated in the early days of the Museum. A Memorandum upon Edusation adopted by the Transes in 1883 and printed in the Annual Report of that year amounted that the policy of permitting classes in art to occupy rooms in the Museum would be continued in any future extension of the building and collections. In this memorandum the Transess stated that they "have not considered it necessary to do more than satisfy themselves that the direction of these classes was in good hands, not likely to bring discredit upon the Museum. They have not asserted any further control or right of visitation." In amounting the larger familian new available for another ends, the Museum dealers that this attillade by clearly understood.

First Manning Building

# HISTORICAL DATA STATEMENTS OF PERPOSES

The charter constrintes "a body corporate, by the same of the Trackers of the Museum of Pine Arts for the purpose of

het of Incorparation, February 4, 1870 erecting a mineum for the preservation and exhibition of works of art, of unking, maintaining, and exhibiting redictions of such works, and of affording instruction in the Fine Arts."

"The objects of the Massian of Fine Arts are: 1st. To make available to the public and to students such art collec-

Report of Committee on By-Laws, March 17, 1870

tions aircardy existing in this neighborhood as the properctors of such suffections may see fit to deposit is a anitable building to be arounged for the purpose, —under such general provisions as to this contains and exhibition thereof as shall be

agreed squar. — with the sole rice to their greatest public iscrediums. Al. To form in this way the unclear of what may be realter become, through the fiberality of enlightened friends of Art, a representative Museum of the Pine Arts, in all their branches and in all their technical applications. 3d. To provide

opportunities and means for giving instruction in Drawing, Painting, Modelling, and Designing, with their infiniteral applications, through lectures, practical schools, and a special library."

the American was founded upon a very brond busis. Its aims, as is expressed in its charter, are to make, maintain, and exhibit collections of works of art, and to affect between in the For Ayta as expressed the interess by the words on its corporate seal, they are, "Ayta is the intreess of the Collection." Industry. Education "I as implied by the readisticals. Industry. Education "I as implied by the readistances, serious, time of free access for the public continued in the port. 1882 deed of its band, they are the benefit and planture of the whole community."

1. . . It is of the first importance that our collections should attract, interest, and instruct the public; and it is of an importance accordingly to this that they aloudd meet the requirements of the artist, the student, the designer, and the specialist?

"In ming our space, the first adject should be by give it to those things which have the greatest interest and beauty; the second, to seeme the propertionate growth of all departments of the Massam."

"To frame a scheme for the purchase of original works is, however, practicable only in the most general way. We must assume as the foundation of it that the Mascom is to be what its name expresses, a Mascom of the Fine Acts, that its primary intention is to collect and exhibit the less obtainable works of genius and skill; that the application of the Fine Acts by archaeology are both within its province, but that neither of these is its fiest object,"

#### DRIGIN AND GROWTH

In 1836, eleven years before the incorporation of the Misscome the Juries Collection of Daton pictures, now in New Hween, had been offered as a nucleus for a public Poundation. money of art in Boston, but the project had been alternationed. In 1866 several electrostances combined to reswaken interest in the scheme. The Boston Athenaeum had received a bequest of armer and the offer of funds for a room wherein to exhibit it. The Social Science Association had conceived the idea of a public collection of plaster reproductions of sculpture. Harrard College sought an opportunity to make the collection of sugravings meful to the amble. The Massachusetts Institute of Technology had no sufficient from for its collection of architectural casts. In October, 1860, representatives of these organizations united with other interested persons in appealing to the State Legislature, which early in the following year established a public Misseum of Plac Arts in Boston by granting the present charter. No support from State or Cuy was provided for, and none lms ever been received, the only gift to the Misseum from a public source being the plot of ground on Copley Source occupied by the first building.

Among the founders of the Museum, Martin Brimmer, its President for twenty-five years until his death in 1893, and Charles C. Perklus, Homoury Director for sixtrem

Feanders

years mutil bia death in 1888, should be mined first. The reports and published addresses of both

testify to their high conception and clear grasp of the essential purposes of the Museum. The first executive officer apparated was General Charles G. Leeing, a veteran of the Civil War and both before and after a traveller in Egypt and student of Egyptology. General Loring remained in general charge of the Museum for twenty-six years as Carator and afterward Director, from its opening in 185% until his resignation to 1969, and at his death a few months later was Director Emerius.

At a meeting hold February 3, 1871, in Music Hall, a

committee was appointed by solicit authoriptions for a Museum building. The amount ultimately obtained was \$261,000. From a number of competitive designs for a preproof structure, the plans of Storges & Brigham, wellknown architects of Boston, were selected. A wing of the building was dedicated with appropriate ceremony. on July 3, 1ste, and on the pest day, the contamnal anniver-

sary of the Declaration of Independence, it was opened to the The collections of the Maneura, both gifts and loans. which for four years had been exhibited in two mones at the Athon sum, were installed in the new structure.

To requilete the front of the building another popular subscription was called for in 1878. The response was prompt and generous. In 1808 another colorgement of the building became necessary. The amount received from this third subscription analited the Trustees to creet two wings which, with a connecting carridor, completed a quadrangle. The enlarged building was opened in 1800, the contents corranged; on the first door, the collections of Egyptian and Classical antiquities, with easts of antique and Remaissance sempture; on the second, the collections of paintings, minor arts of Europe, and Oriental

For many years the Museum was without funds for pair hases. notwithstanding the utmost economy in administration. The exhibits of this period consisted almost entirely of

sours. Later both bequests and gifts were received. Henry L. Pierre, Catherine C. Perkins, Julia B. H.

James, Harvey D. Parker, George B. Hyde, and a number of others, left large sums to the Museum, and these benefactions have been continued by the bequests of R. C. Billings, C. H. Hayden, Sarah W. Whitman, Martin Brimmer, and others. Within the ten years emling in 1904 the free me of funds available for purchases more than doubled the value of the collections belonging to the Mosesna.

The collections of Egyptian Art now embrace sculptures, luciuding royal statues from the Myrerinus Pyramid Temple at Girch, obtained in the course of recent excavations by the

Harvard University-Museum of Fine Arts Exploring Expedi-Don; smaller objects, including out leather surment of 1250 B. C., gold ornaments, tiles. The collections. The Collegof Classical Art embrace scriptures, including tions the Three-shird Relief (lifth century), Hord of Aphrodite, femule head from Chica (fourth century), Head of Homer (Hellenstic): term-cotton, including portrait head (Roman); yeses, bronzes, coins, and gerns, including Mariborough cames (Graces-Rounn). The collections of Chinese and Japanese Art embrace sculptures of wood, brouge, muchle, and lacquer from the lifth century to the present time; minyings, including the Hokke Mandara (eighth century) and the Heiji Monogatari Roll (thirteenth century); endy Chinese pottery; Chinese broase mirrors, swords, and lesser works in sculptured iron, bronge, allver, and gold; bequer, porcelains, The cultections of paintings embrace Spanish, Italian, Flominh, Dutch, French, English, and American examples, Including Don Bultasur Carles and His Dwarf, Veloques: Slave Slop, Turner: Watson and the Shark, Copley: Athenneum Heads of George Washington and Martha Washington, Stuart. In the other collections of Western Art the collections of Molescemoday art embrace pottery, including the Sears Persian lustre hout (thirtisenth century), Persian Illiminations, Persian rugs, and velvels. The collections of European Art conbrace textiles, tochiding Flemish tapestries (fifteenth and early sixtuenth croburies ), scalature, including Head of Ceres, by Augusta Rodou smaller objects, including Paul Revere silver. The collection of Prints consists of 80,000 examples. The collection of Plaster Costs contains several hundred casts from Greek, Roman, and Italian Renalssance semipture. The Library contains 50,000 books and pamphlets and 50,000 photographs; all chosen with special reference to the Museum collections and intended for the use of both Staff and public.

For several years after the ladding was opened, the administrative work of the Museum was performed by the Director and the Secretary with a small number of assertants. In 1883 two of the departments were placed in charge of men of special compitence. Since that time numerous additions have been made to the staff of trained men upon whose judgment the Trustices have reflect in the obside of acquisitions and the arrangement of exhibits, and to whom the public have come to look for aid in the understanding of the collections. To the boul of active-minded and devoted scholars who are or have been identified directly or indirectly with its interests, the Museum over much of its present alanding abrend and influence at home. In 1908 Visiting Committees to the Departments of the Museum were appointed, and in 1908 Advascry Cummittees upon branches of its activity.

The development of the methods of the Museum has kept pace with the growth of its means. The Simeum has sought to attain its first charter purpose - that of protecting works of art from destruction and oblivion in a special building - by providing in the new Service structure (1909) the best conditions of safety; by arranging therein exhibition galleries by which each object is shown to the best possible advantage; by stimulating public interest through afternative exhibitions drawn from collections held in reserve; and by promoting understanding of the objects shown, through both und and printed interpretation. The methods of eral interpretation employed include Gallery. Conferences talner January, 1908) by affivers of the Museum and other connetout persons on objects shown at the time: the andgement of these and other speakers under the title of Decent (since April, 1907) to the duty of meeting visitors singly or in groups in the galleries to give information about the exhibits. The Sunday Docust Service (since January, 1908) includes guidance, talks, and department circults affered by profesalonal men and others of special training. Printed side to undegaineding the collections include labels and chart books in the galleries, a Handbook (first edition, August, 1906), Bulletin (first baue, March, 1903), and other publications; photographs (since May, 1887), postal cards (since 1907), and half-tones illustrating Museum objects sold at the door; teachers' lists bines

1908) of objects relating to historical percent and teachers' loan collections of photographs and hadern slides.

The Museum has saught touttain its second charter purpose - that of imparting knowledge and skill in the field of fine artby maintaining a library of fine set (since 1817); by giving free admission to students and copylets (since 1870); by providing in its new building (1909) reserve galleries in which each object can be studied to the best mirantages by offering special students opportunities for work in the Department offices (since 1881); by publishing entalogues of permanent value(since 1881); by arranging courses of lectures on subjects genuane to the collections (since 1802, University Extension courses since 1808); by establishing a public inventory of works of art ontone the Museum, interesting and accessible to the Boston cublic, under the title of a Registry of Local Art (since October, 1900); and by giving the best instruction practicable in the arts of drawing, painting, modelling, and designing in the School of the Museum (classes begun is/h; reorganised as the School of the Museum, 1901).

Three circumstances led the Treaters in 1899 to consider seeking a new site and erecting a new building - the had-

Studies for the New Measure equacy of the Copley Square building and lot for the future accommodation of the Meacun, the danger of fire from high neighboring attractures, and the obstruction of light thereby. The grounds

on which the present Museum stands, covering twelve acres fronting on Hantington Avenue and the renway, were purchased by vole of the Board on December 5, 1899. On April 22, 1902, the sale of the Copley Square property was effected and on May 27 a Building Committee was appointed, under the Chairmanship of Samuel D. Warren, "with full powers to procure plans, specifications, and estimates for Massum buildings on the Fenway land."

At a number of meetings of the Suliding Committee the question of a competition of architects was carefully combined. the decision of the Committee being to select two architects who should report a building scheme without prejudice to the right of the Trustees to proceed the positive as they might elect. In accordance with this decision, the Committee in the following November commissioned Mr. R. Clipston Stargis in consultations with Mr. Edmond M. Wheelsright to collaborate with the Committee and the Smill of the Museum in studying the possibilities of the Fenway site and in formulating a possible solution of the building problem both in writing and by drawings and sketches. In order to the best utilisation of the property, the Trustees asked and obtained from the city a change in the layout of Hustingian entrance and the Fenway, replacing its original curves by rectangular outlines.

The series of studies which have ended in the present plan were began in January, 1903, and actively prescritted. They are recorded in several scores of progressively changing sketchplans based on many hundred detail drawings, and their direct written result includes, besides reports from Messes. Sturger and Wheelwright and from others, two volumes catified "Communications to the Trustees regarding the new building " Nos. 1 and 2, privately printed in March and December, 1904, and confaining, with extracts from recent filemture on museum construction and administration, papers confributed by officers of the Museum. In December, 1903, the Building Committee, with the approval of the Trustees, commissioned the architects and the Director to study European museums. Accompanied by the President of the Museum, the party spent the following three months (January to April, 1901) in Europe. visiting one hundred and four museums and galleries in thirty cities. An illustrated volume containing reports of observations by Messes. Sturgls and Whielwright, architects, was privately printed in January, 1905, as No. 3 of Communications to the Trustees. During the summer of 1903 the Consmittee authorized the erection of a temporary structure on the Fenway site for the purpose of experiments in the lighting of galleries. The work was conducted at first under the supervision of Professor Charles L. Nucton of the Institute of Technology, and later to the immediate charge of Mr. W. R. McCornack, in co-operation with Mesers. Storgis and Whielwright, architects, and with the committees and officers of the Massaum. Experiments were continued for two years, and in January, 1906, an illustrated volume entitled "The Experimental Gallery," sunbodying the results of the tests made was privately printed at No. 4 of Communications to the Trustees.

In October, 1965, the Building Committee requestrd and received from Professor D. Despreadelle of the Institute of Technology a critision of the studies for the new building made since 1963, which included sketch-plans authoritied by officers of the Miscoun during the preveding summer at the matance of the Committee. Three months later, in January, 1906, the Committee presented to the Trustees a manimous report, accompanied by a sketch-plan, elevations, and a perspective, drawn by Professor Despratelle, and recommended that instead of loatitating a competition the Trustees should appoint Me. Guy Lowell as architect of the building, with Mesurs, P. M. Wheelwright, R. C. Sturges, and D. Despendeller as consulting architects, to carry out the design in substantial compliance with the general requirements of the Committee as elaborated during the previous three years. The Trusteen responded by authorizing the Committee to obtain plans in general accordance with their recommendations, and on the 18th of the following July the Committee presented to the Trusteen plans, elevations, sections, and a perspective prepared by Mr. Lowell, These were accepted and adopted by the Trintees, who, at a subsequent meeting held February 4; 1907, authorized the signing of a contract for that part of the structure which had been planned in detail for humediate erection.

On April 11 ground was broken. On July 18 Mr. Warren resigned the Chairmanhip of the Building Committee, remaining a member; and Mr. Henry S. Hannewell, a member of the Committee from the beginning, was appointed in his stead. Two years and four mouths later, November 15, 1909, the building was aponed to the public.

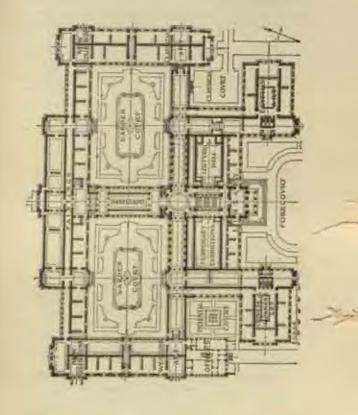

The total cost of the new Mineum was about \$2,000,000.

The sum of \$1,500,000 was expended for land and haprovements, \$1,000,000 for the building fiself, and \$100,000 for moving and untailation. These expenditures have been defrayed from the process of the sale of the old building (\$1,730,000), contributions from private individuals (\$600,000), and appropriations from the Minman endowment (about \$300,000). The building contains eight structurally superate departments. - Egyptian Art, Classical Act, Western (Eurotean and Molammodan's Art. Chimese and Japanese Art. Pictures, Prints, Class, and Library, - the main floor being chiefly devoted to exhibitions historically arranged and installed to show each object to the best advantage, said the has contain the at discesse and isolar reservoir and result from to study and administration rooms; both floors being abunfautly lighted, mostly by high windows. An arm of 91,882 square feet of fleor space is devoted to primary exhibition pur-Ixage and SI,437 square feet to reserve collections, offices, workramms; etc.

Plans for the evential development of the Ferway property contemplate buildings covering the cutire alle. These counst of the completed Museum to the cast, a building to the northwest for costs from sculpture, and another to the southwest for the School of the Museum Ministen, confusing the present previsional structure. The gift from Mrs. Robert Dawson Evens in May. 1911. of that portion of the Ferrary front designed to a picture gallery source the completion of the Museum in general

accordance with the original plans.

In the completed Museum the present Retunds on the main floor, reached by the stateway from the entrance, will be about equally distant from the centre of the principal departments. Straight on murthward a gallery for Especteies now books to the Picture Gallery lying out and west on the Fenway The present galleries cast and west of the Rotunda will in future give access sustward to the wing on Huntington Aveinc, then to be devoted cutirely to Egyptian Art, and to a block on Huntington entrance to be devoted to Classical Art; and

westwork to the wing on Huntington Avenue, then devoted wholly to Chinese and Japanese Art, and to a new interior block to be devoted to Western Art. From the lobby of the Picture Gallery on the Forway an interior corridor, continued as an external loggis fronting meltiword, will lead east and west to galleries accessible either through existing Departments, and hence available for their extension, or through corridors only, and hence available for new Departments.

Four principles of arrangement determined the plan of the completed healthing, and have been athered to as far as possible in bounding the collections and work of the Museum in the

present fraction of the whole design.

Direction in Plan. The building is not a single moscum, but a group of several, such devoted to collections of our origin or of one character, and such accomilde without traversing any other.

Separation by Resting Places. The grounds and open courts of the building, the halb and loggies counceting the departments, offer opportunities for relaxation and diversion among aurmomitings either of untural beauty or of architectum' dignity.

District in Electron. Almost the entire main floor is desorted to exhibition, while a large part of the ground floor is devoted to rooms for study and for objects arranged compactly for preservation, both study and store rooms being open to the

public upon application,

tildigas Hismination. Most of the galleries are lighted by high windows instead of from overhead, and the size and arrangement of both windows and skylights throughout the building are the fruit of observation and experiment directed to securing ample and well-directed illumination in all parts of overy man.

These four previsions aim to obviste recognized hindesmost to the fullest effect of misseum collections upon the venter. The separation of departments prevents confusion and distraction of thought; intermediate resting places forestall fatigue of body and mind; opportunities for instruction reoder the exhibits comprehensible; well designed light openings make them rightle. The plans permit of ineeting a fifth hindrane.

## CHRONOLOGY

The Monton Incomposation Prosters 4, 1870.

## DEPARTMENTS

The Museum placed under the general charge and management of a Curator rafterward Director) January 21, 1816.

Library organized July 17, 1819.

Print Department established February L. 1881.

Department of Chasical Actiquities established March 1, 1887.

Japanese Department established March 15, 1800. The title clauged to "\* Department of Chinese and Japanese Act." April 48, 1903.

The same of the School of Drawing and Painting (maintained since January 2, 1877, in the Museum building) charged to "School of the Museum of Pine Arta" October 17, 1907.

Keepership of Paintings instituted August 1, 1902.

Department of Egyptino Art created September 15, 1904.

Honorary Curatorship of Western Art (except paintings and textiles) created April '11, 1910.

Countorship of Painting counted May 11, 1911.

# LAND AND BUILDINGS

Land on Copley Square given by the City May 26, 1870. West wing upon Copley Square opened to the public July 3, 1876.

Completed front on Copley Square opened July 1, 1879. Southern corrilor and connecting wings opened March 18, 1880.

Land on the Fenway purchased December, 1800.

Land and buildings on Copley Square sold April 94, 1904.

Ground broken for the New Hollding April II, 1907.

New Building opened November 15, 1909.

Robert Davison Evans Galleries for Paintings opened. February 3, 1913.

Location of the Musmin Buildings

T. O. Mateuil Company, Beston, J. & A.

# THE MUSEUM PRIEE TO ALL

January 18, 1927

In pursuance of a recommendation by the President of the Misseum presented at the annual meeting, January 17, 1916. the Triutees voted that admission to the Museum about the free to the mildle until further notice. The vote embed a prothe followed since the Massam was opened in 1878. The grit to the Museum by the City of the site of the first building on Copier Square - the only gift from a public source ever received by the Museum during its whole history - was conditioned upon free opening during at least four days each mouth. In compliance with this condition, the Museum has been open free on Saturdays from the beginning, and since 1877, when the building was opened free on Smidays also, the condition has been doubly not. The five other weekdays, excepting when public bolidays, from the first remained days of paid admission. The mm received from entrance fees in these days continued to be a source of revenue too rousidouble to urgieri. It has at length been dispensed with altogether in the confident expectation that the private gifts on which the Museum exclusively depends will eventually, and perhaps at ones, more than make good the Louis.

The step is one of far reaching significance. In abeliahing admission fees the Museum annuances once for all that, although wholly supported by private gifts, its intents and purposes are those of a public institution.

#### GROUND PLOOR

The exhibition galleries of the Print Department and the gallery of Water Culors are on the entrance floor on eather side the reaching of the Exams landing. The rest of the entrance floor is exampled by secondary collections and officer.

Not all the contents of the Museum can be shown at unce. Fach department possesses a larger or smaller reserve collection which may be drawn upon for alternative exhibition in the main galleries. Persons especially interested are welcome in the department offices for conference with the officers and study of objects mit shown at the time.

On the opposite plan the offices are industral as follows:

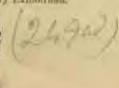

Administration: A	Western Art WA	
Secretary of the Mineum, S.	Egyptom Art E	
Frints Pr	Textile Study Ta	
Classical Art C	Paintings Pa	
Chines and Japanese Art.	Superconvendent of the
